PREFACE

This, the first, volume of a new Catalogue of Muḥammadan Coins in the British Museum, contains the Arab coins of Sassanian type which were issued in the Eastern Provinces by the Caliphs and governors of the Umaiyad and early 'Abbāsid dynasties. The coins of this class in the British Museum are here catalogued for the first time, and this is the first Museum Catalogue devoted entirely to this class of coins.

In view of their historical importance and the rarity of the individual specimens, a large number of coins from other cabinets, both public and private, many of them previously unpublished, have been included in the present Catalogue. For permission to describe, and in many cases illustrate, them my thanks are due to their respective curators or owners. (For details of these see the List of Abbreviations, pp. xiii f.) Much fresh material for the work was acquired during a visit which I was enabled to pay in 1937 to the Museums of Turkey, Syria, Palestine, and Egypt. For this great opportunity I take this occasion to express my thanks to the Trustees of the British Museum.

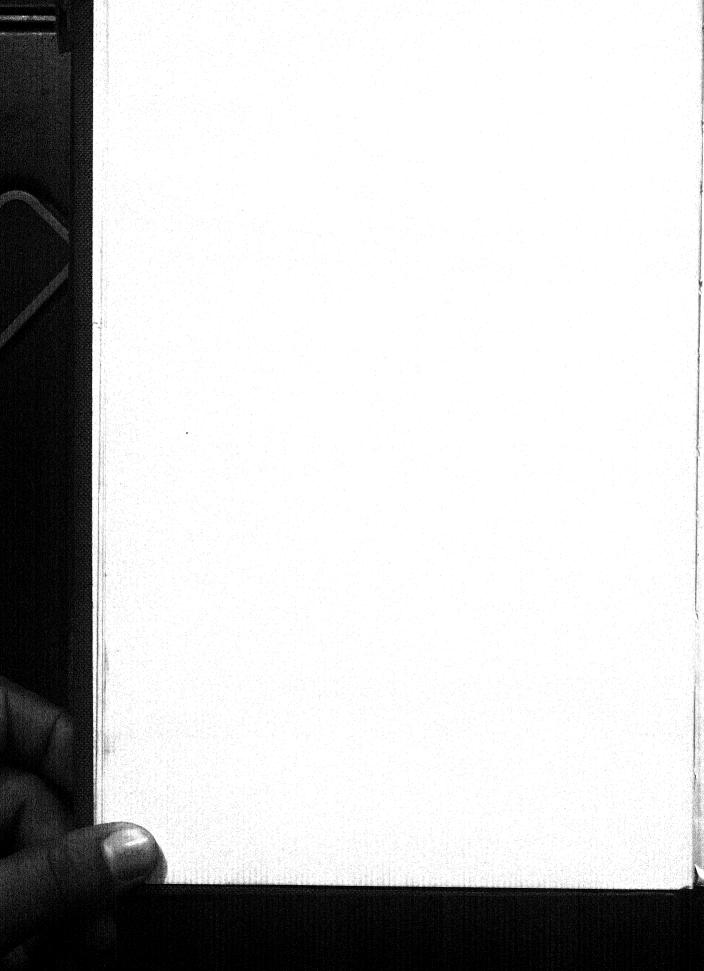

Special attention throughout has been paid to the epigraphy of the coin-legends, and a section of the Introduction (pp. clii ff.) has been devoted to this. The intricacies of the Pehlevi and Kufic scripts and consequent difficulties of elucidation can be judged from the tables printed there. The Table of Pehlevi mint-signatures (pp. cii ff.) should also prove useful in this connexion.

In the transliteration of the Arabic legends a system approximating to that of the Royal Asiatic Society has been deemed the most suitable. In the case of the Pehlevi legends a skeleton transliteration only has been employed. Names, on the other hand, which have become familiar to readers in an English guise, such as Mecca, Medina, Caliph, Sassanian, Pehlevi, &c., are retained as such. The Arabic definite article in the commoner proper names, such as al-Ḥajjāj or al-ʿIrāk or al-Baṣra, is frequently omitted.

Throughout the compilation of the work and the correction of the proofs I have been greatly helped by the advice and encouragement of Mr. John Allan, Keeper of Coins. I am also indebted to my colleague, Mr. Harold Mattingly, for his kindness in reading the proofs of the greater portion of the Introduction and in making helpful suggestions.

6 February, 1941

INTRODUCTION

I. GENERAL ARRANGEMENT AND SCOPE

The term Arab-Sassanian is used throughout this Catalogue as a convenient description for all those Muḥammadan coins with Arabic and/or Pehlevi legends, which were struck after the Sassanian fashion with conventional portrait on the obverse and on the reverse usually a Zoroastrian fire-altar and two attendants. Such were the coins issued by the Arabs who assumed the government of the Sassanian provinces after the overthrow of that great monarchy. For close on two hundred years this national coin type persisted in the Eastern Provinces of the Caliphate until in a very debased form of its original character it found its final expression in the native currency of Bukhārā under the 'Abbāsids.

The coins of this Arab-Sassanian type—which are for the most part silver, a small minority being copper, and none of them gold¹—have been grouped as follows:

- (I) The Umaiyad Governors in the East and some of their Predecessors (c. a.h. 31-83 = a.d. 651-702).
- (II) The Arab-Ephthalite Coins (of <u>Kh</u>urāsān) (c. A.H. 50-69 = A.D. 670-688).
- (III) The 'Abbāsid Governors in Tabaristān (c. a.h. 144-197 = a.d. 761-812).
- (IV) 'Abbāsid Coins of Bukhārā (c. a.h. 158-200 = a.d. 775-815).
- (V) Isolated Coins of Arab-Sassanian Type (Umaiyad and Early 'Abbāsid Period).

Apart from II, which is properly speaking a special sub-division of I; and V, which is a special supplementary division, the grouping is chronological. Group I—with one or two early exceptions—and Group II fall within the Umaiyad period, although some of the governors who issued them were antagonistic to the Umaiyad rule; while Groups III and IV belong to the early 'Abbāsid Caliphate, the former continuing

¹ A number of forgeries in gold but from silver types are known. They have deceived even expert numismatists. See below, pp. 161, 191, 193.

the style of coinage struck by the native Zoroastrian princes, or Ispahbads, of Ṭabaristān, the latter that of the Bukhār-Khudās, or Lords of Bukhārā. In the last group (V) isolated specimens that cannot conveniently be included in any of the preceding groups are collected. The dating of some of these latter coins is problematical, but none is later than the early 'Abbāsid period. All of the above coins, however, without exception, derive from the coinage tradition of the Sassanian monarchy in Īrān. Here as in other parts of the new Islamic dominions the continuity of already existing coin types was uninterrupted and maintained for a time by the conquering Arabs, in deference to well-established national preferences. Of the above groups that of the Umaiyad governors in the East and some of their predecessors is by far the most important. The others, although historically and numismatically interesting, particularly Group III, are none the less more local and short-lived.

The British Museum coins of the foregoing groups have never before been systematically catalogued. For some reason they were not included by Lane Poole in his Catalogue of Oriental Coins, although according to a statement in his Introduction (vol. i, p. vii) it was his intention to do so in a forthcoming volume. Even in the case of other important Catalogues of Oriental Coins, such as those by Fraehn, Tiesenhausen, Stickel, Lavoix, Nützel, and Ghalib Edhem, only a small portion of space is allotted in each to the Arab-Sassanian series, and none covers all the above groups in their entirety. Besides, apart from Museum Catalogues, important articles on collections of these coins, private and otherwise, have been contributed to scientific periodicals by several oriental scholars of the last century. In this connexion special mention should be made of Olshausen, Mordtmann, and Thomas. All these published examples as well as subsequent unpublished new data have never until the present attempt been assembled and critically considered. Unfortunately, many of the coins mentioned by previous writers on the subject have not been, or at least have been inadequately, illustrated. Naturally the interpretation of their legends and types is frequently open to suspicion. Numerous instances of dubiety or misinterpretation on the part of their editors will be found indicated in the notes throughout the present Catalogue. Hence it has been considered advisable to illustrate as liberally as possible, more especially those obverses and reverses whose legends might be called in question, as well as those that are in any way remarkable. Moreover, in order to make this Catalogue as near to a corpus as possible, many examples from other

collections, published or otherwise, are cited and in many instances also included in the plates. In the case of rare coins previously described, but not properly illustrated, the whereabouts of which to-day can no longer be traced for purposes of verification, a statement to this effect is inserted as a *caveat*.

The author is quite aware that the arrangement of the coins in the plates, and especially their system of enumeration, is not by any means the most scientific one, and may occasionally hinder convenient reference to the text. Unavoidable circumstances, however, attending the preparation of this Catalogue for the printer, rendered this inevitable. It is hoped, nevertheless, that the inclusion of a Concordance of Plate and Page References at the end (pp. 243 f.) will make amends for this.

In order to demonstrate the continuity of coin-types from the Sassanian into the Muḥammadan period prototype coins have been added and briefly described when essential, as in the case of Groups I, III, and IV which derive from collateral branches of the common Sassanian stock. As this individual type is slavishly perpetuated on both obverse and reverse, almost without exception, throughout each group, only the omission or inclusion or divergency of details is noted after the standard form has been described at the outset. The phrases, 'usual Sassanian bust' for the obverse, and 'usual Sassanian fire-altar and attendants' for the reverse, are sufficient to indicate the prevailing type in each particular group. Only those variations in design or legend are indicated which have been observed by the present writer on the coins themselves or derived from a study of casts and photographs, or deduced from the published statements of others.

In accordance with Museum practice the particulars, where known, of acquisition are given at the foot of the page, and additional references (which are collected at the end of the Catalogue, pp. 175 ff.) are made to other previous publications of the coins in question, if any, as well as any supplementary information or discussion that has been considered of sufficient relevance. References are also made to any earlier publication of coins of similar type and date and particularly to specimens in other museums, or accessible collections, which have been illustrated. In the case of rare coins, in particular, all possible examples known to the writer from his own observation, or reported to him on the authority of others, are cited. Many of these coins not in the National Collection have been embodied in the present Catalogue in their proper sequence outside the running catalogue number. For convenience of

reference these coins are indicated by an abbreviation and a number. (See List of Abbreviations, pp. xiii f.)

In Group I the coins are subdivided as follows:

- A. Those which have the name of the Sassanian king: i.e. either Yezdigird III; or, most commonly, Khusrau II; or, rarest of all, Hormuzd IV.
 - B. Those with the bust of the Sassanian king, but without any name.
- C. Those with the name of the Umaiyad Caliph: i.e. either Mu'āwiya or 'Abd al-Malik ibn Marwān—the names of the other intermediate Caliphs do not occur on any specimen so far known.
- D. Those with the name of a provincial governor. This sub-division, which is more or less chronologically arranged, is headed by 'Abdallāh ibn al-Zubair, who for a time was a rival Caliph in Arabia and in the Eastern Provinces, and also contains the celebrated Khārijite anti-Caliph Ķaṭarī ibn al-Fujā'a. At the end are placed a few uncertain governors whom the present writer has not succeeded in fitting into the historical background with any assurance.
- E. Those without any name which are dated within the period of the preceding sub-division.
- F. Barbarous imitations of coins of this group, which, judging from the marginal legend on one of them, were perhaps struck in Sīstān. It is impossible to attribute them to the Umaiyad period with certainty as their dates are bungled or illegible.

In the case of A the coins are first of all arranged according to years, and then according to mints; whereas in the case of subdivisions C and D they are arranged first according to mints and then according to years. In the case of B, E, and F, the paucity of material renders any further subdivision unnecessary. It should be borne in mind that the mintgrouping is largely arbitrary because of the uncertainty that exists regarding the interpretation of many of the mint-signatures. The table on pp. cii—cv and the Index of Mints on pp. 223 ff., however, should provide an exact guide to and summary of this material.

Group II, which is small in scope, is of some rarity. These coins have been designated by the present cataloguer as *Arab-Ephthalite* for reasons which will be more apparent when their legends and chronology are considered below. So far as possible they are arranged under mints and attributed conjecturally to two governors. This is a quite new interpretation and every indulgence is asked of the reader in any criticism of the proposed hypotheses. As can be seen from the foot-notes the majority of specimens so far known of this group are in the National

Collection; one hitherto unpublished and unique specimen is in the American Numismatic Society Collection, New York (ANS. 17, p. 127). Group III has been subdivided as follows:

A. Posthumous coins with the name of the last native *Ispahbad* of Ţabaristān, <u>Khursh</u>īd, probably struck by the 'Abbāsid governors.

B. Coins with the name of the 'Abbāsid governor, written in Pehlevi or Arabic, or in rare instances in both languages.

C. Coins with the Pehlevi word AFZUT written in place of the usual name-legend. A few examples of this type have, however, a governor's name in Arabic added in the margin. This section also includes at the end what to the present writer appear to be very questionable examples in gold and copper.

The coins in all cases are of the mint of Tabaristān (Pehlevi TPURSTAN) and they have all been arranged, in their various sections, chronologically. It will be seen that there is thus a certain amount of overlapping in the case of some governors. That point will be commented on when we come to deal with the chronology of the coins, and can be readily seen from the table on pp. lxxiv f.

Group IV, after the evolution of the coinage from the Sassanian prototype of Bahrām V has been traced through the intermediate Bukhārān imitations, is subdivided into: A. Coins with bilingual legends; and B. Coins with Arabic legends only.

As none of the coins of this group has either mint or date expressed, their allocation territorially and chronologically must be deduced from internal evidence aided by fragmentary statements in the annalists For this discussion reference should be made to the section below dealing with the matter (pp. lxxx ff.).

The last group (V) is a kind of 'omnium gatherum', which contains coins which are partially akin to coins in the foregoing groups, but which just escape by reason of some defect or peculiarity from being eligible for admission to one or other of them. For example, there is the coin of Tabaristān type (I. 58, p. 174) which cannot be placed in Group III for the simple reason that it was struck at the mint of Raiy. Others again, while they have a traditional Sassanian bust on the obverse, are without the usual reverse with fire-altar and two attendants, and instead have a legend either wholly in Pehlevi or in a mixture of both Arabic and Pehlevi. These are stray pieces which, in our present state of limited information, can only be grouped together promiscuously. The group has been sub-divided into: A. Uncertain (Umaiyad or early 'Abbāsid) Period; and B. 'Abbāsid Period.

In this Catalogue only those coins are included which bear definite signs that they were issued under Arab control, such as either legends in Arabic or names of Arab governors either written in Pehlevi or in Arabic or in the so-called Ephthalite script. An apparent exception to this rule of limitation occurs in Group III, sub-division A, which contains certain coins bearing the name of Khurshīd and dated after the time of his death as reported by the native historians. These posthumous coins, for historic and numismatic reasons to be mentioned later, have been regarded as almost certainly products of the minting operations ordered by one or other of the early 'Abbasid governors of the Tabaristan Province before they began to substitute their own names on the coins for that of the defeated Ispahbad. Strictly speaking, another exception to the above rule is that of the AFZUT coins (Group III C) in this same series. Although they, with rare exceptions, never bear any trace of Arabic script, they were struck by 'Abbāsid governors as is clear from their dating and other internal evidence. On the other hand, amongst the Sassanian coins of Khusrau II there is a wellknown group with the Pehlevi word __ 3 on the obverse margin. These coins, in contrast to the early coins of this monarch, are usually well produced and very like certain Arab-Sassanian coins in fabric and workmanship. It is quite within the bounds of possibility that some of these might have been issued under the Arabs in the Iranian provinces, but as there is no definite evidence to substantiate this, such coins are not included in this Catalogue.2

¹ The assertion by Unvala (*Numismatique du Ṭabaristān*, p. 13) that these so-called 'anonymous coins' were struck by the Zoroastrians who revolted against the Arabs is in my opinion untenable. See below, p. lxxiii.

² De Morgan (in Babelon's Traité, iii, tome i, p. 548) has dogmatically attributed them to the Arab governors at the time of the conquest. Besides these there are certain odd specimens with the Pehlevi marginal legend AFD abbreviated to AF (a.). This last has frequently been misinterpreted as the Arabic W lillāh, and the coins in consequence have been classed as Muḥammadan. Instances of this mistaken attribution, wherever they are detected, are cited throughout the Catalogue notes. Thomas (J.R.A.S., 1850, p. 283) was particularly unfortunate in this respect; he read the Pehlevi AFD as representing the Arabic 'ABD (a.c.).

II. HISTORY AND CHRONOLOGY

GENERAL SURVEY

The 16th July, A.D. 622, is a cardinal date in Islamic chronology. That day is reckoned by Muhammadans as the first of the sacred month of Muharram, which opened the Year of the Flight (or Hijra). The event commemorated was the migration (hijra) of Muhammad and his adherents from Mecca to Yathrib. The latter place was afterwards to be known as Medina, 'the City', or in full 'the City of the Prophet' (Madīnat-al-Nabī). During the next ten years this city was Muḥammad's base. The politico-religious propaganda of the new religion of Islam emanated thence and impinged on the encircling tribes and the more settled and civilized nations beyond Arabia. An old tradition, now discredited, tells of embassies being dispatched by the Prophet in A.H. 6 (A.D. 628) to the neighbouring Ghassānid and Lakhmid princes and, still more ambitiously, to the rulers of Byzantium, Persia, Egypt, and Abyssinia. It was a bold move, which, if the story is not, as is most probable, historical prolepsis, might have been justified by what subsequently happened—the rapid development of Islamic power following the death of Muhammad in A.H. 11 (A.D. 632), under his energetic successors. The Prophet's father-in-law, Abu Bekr (Abū Bakr), was the first Caliph (Khalīfa), i.e. 'successor' or 'representative' of the lately deceased Apostle of Allah (rasūl Allāh). During his brief but resolute leadership of the nascent Islamic community (A.H. 11-13) the fanatic tribesmen were thrusting their way through the buffer-states on the Arabian frontiers into the rich empires beyond. But it was under the next Caliph Omar ('Umar ibn al-Khattāb) that the spectacular victories of the early Arab territorial expansion were won. Palestine, Syria, Egypt, Persia—in all these countries the sword of Islam prevailed. The years, as they pass, record a succession of brilliant and shattering victories almost unparalleled in the annals of history.

In this Catalogue we are concerned only with the eastern advance through Mesopotamia (the modern 'Irāķ) and Persia (the modern Īrān) and to some extent Transoxiana, i.e. the territories beyond the river Oxus.¹

Geographically this area roughly coincided with the vast empire of the Sassanian dynasty that had ruled there for fully four centuries.

¹ The Arabic designation of this region was Mā warā' al-nahr (ما وراء الهر), literally, 'What is behind the river'.

The prestige of the royal house of Sāsān in the East was the counterpart of that of the imperial family of Byzantium in the West. Both received the rude shock of the sudden onslaught from the desert Arabs; but whereas the latter only lost part of its territory (principally Syria, Palestine, Egypt, and North Africa) the former was completely and utterly submerged by the deluge of invasion. The death blows to Sassanian supremacy were dealt at the battles of Ķādisīya (A.D. 636) and Nihāvand (A.D. 642). The last Sassanian monarch, Yezdigird III, was forced bit by bit to retreat into the outlying provinces of what remained of his once vast domain. In A.D. 651 (A.H. 31) he was assassinated near Merv in the province of Khurāsān and his dynasty was virtually terminated. Province after province came under the sway of the fast-encroaching power of the Caliphs.

When Yezdigird III died, Othman ('Uthmān ibn 'Affān) was Caliph, the third in succession after the Prophet. It is with him that the house of Umaiya attained the Caliphate, though it was Mu'āwiya (q.v.), who was actually the first Caliph of what is known as the Umaiyad dynasty. The struggle for the control of the Islamic theocracy at that time was one of bitter discord and intertribal jealousy. 'Alī, the Prophet's cousin and son-in-law—he had married Muḥammad's daughter Fāṭima, an event which was to have lasting historical significance—had each time failed to be elected as Caliph much to the chagrin of himself and his partisans. The favouritism, therefore, which the Caliph Othman manifested towards the members of his own house of Umaiya, naturally kindled the flames of revolt, and for long afterwards the 'Alid supporters were destined to upset the equilibrium of the ruling power, whether Umaiyad, or, afterwards, 'Abbāsid.

The assassination of Othman in A.H. 35 (A.D. 656) released the pent-up waters of civil disorder and set the whole Islamic world in a turmoil. 'Alī had homage paid to himself as the new Caliph in the mosque at Medina. But two of the prominent old 'Companions' of the Prophet, Talḥa and Zubair, together with the Prophet's favourite wife 'Ā'isha, opposed him and made the new city of Baṣra their head-quarters. 'Alī found support for his cause in the rival city of Kūfa, and at the Battle of the Camel (A.H. 36) he succeeded in crushing the revolt. The two garrison cities, and with them the whole of the province of 'Irāḥ, were his (A.H. 35-40). The centre of gravity of the Caliphate, incidentally, had for the first time passed outside the holy territory of Arabia.

Syria, however, was still unsubdued. For some twenty years this important province, with its heritage of Byzantine culture, had been

very ably governed by Mu'āwiya—a cousin of the recently murdered Caliph—who, backed by his well-disciplined standing army, refused to regard 'Alī as legitimately elected. He succeeded in securing a settlement by arbitration.

Mu'āwiya triumphed, but it was not until a.H. 41—after the assassination of 'Alī (a.H. 40) and the deposition of his eldest son Ḥasan (a.H. 41)—that Mu'āwiya as first Caliph of the Umaiyad dynasty established his capital at Damascus. This continued to be the centre of the Caliphate—much to the displeasure of the citizens of Kūfa—until the Umaiyads were ousted by their political rivals the 'Abbāsids, about ninety years later.

It was during this famous arbitration crisis that there emerged from the midst of the contending factions a party of fanatics called \underline{Kh} arijites, i.e. separatists (\underline{Kh} awārij). These sectarians were destined to give endless trouble throughout the subsequent history of the Caliphate. Their clarion call was 'There is no judgement (or arbitration) except Allah's '($la \ hukma \ ill\bar{a} \ lill\bar{a}h$), a slogan which occurs, as we shall see, on coins issued by one of their celebrated leaders, al-Ḥaṭarī ibn al-Fujā'a (see p. 112).

The $\underline{Sh}\bar{i}'a$ (or Party) of 'Alī became even more antagonistic to the newly established dynasty than were the $\underline{Kh}\bar{a}$ rijites. They never forgave the Umaiyads for the disastrous massacre at Kerbela in A.H. 61 (A.D. 650) of 'Alī's son Ḥusain and his handful of followers by the soldiers of the Umaiyad governor 'Ubaidallāh ibn Ziyād (q.v.). They had their revenge some years later when they temporarily joined forces with the 'Abbāsids and helped to extinguish the Umaiyad dynasty in the East (in A.H. 132).

In contradistinction to the 'Alid Party ($\underline{Sh}\bar{\imath}'at$ -' $Al\bar{\imath}$) the orthodox (or $Sunn\bar{\imath}$) Muḥammadans maintained that the first three Caliphs of Islam were the following:

Abu Bekr (*Abū Bakr*), A.H. 11-13 (A.D. 632-634). Omar (*'Umar*), A.H. 13-23 (A.D. 634-644). Othman (*'Uthmān*), A.H. 23-35 (A.D. 644-656).

These are known by the $Sunn\bar{\imath}s$ as the 'Orthodox Caliphs' (al- $\underline{Kh}ulaf\bar{a}$ al- $R\bar{a}\underline{sh}id\bar{u}n$). The $\underline{Sh}\bar{\imath}$ 'a naturally disputed this and regarded 'Al $\bar{\imath}$ as the rightful Caliph. As we have seen, his brief spell of office (A.H. 35–40) was far from achieving the universal acclamation of the Islamic community. On his assassination his eldest son Hasan—a weakling—claimed the Caliphate, only to be forced in the following year into retirement, and an ignominious death by poisoning, by a stronger claimant, Mu'āwiya. Thereafter, for well-nigh a century, the widespread Islamic dominions

were under the control of the Umaiyad Caliphs whose reigns were as follows:

UMAIYAD CALIPHS

(capital, Damascus)

A.H. 41-132 = A.D. 661-750

(a) Elder Branch: Sufyānids

	A.H.	A.D.
Mu'āwiya ibn Abī Sufyān	41-60	661-680
Yazīd ibn Mu'āwiya	60-64	680-683
Mu'āwiya (II) ibn Yazīd	64	683-684

(b) Younger Branch: Marwānids

Marwān (II) ibn Muḥammad ibn Marwān (I)	127 - 132	744-750

Under the Umaiyad Caliphs the Eastern Provinces—in which section of the Islamic world the coins of this volume of the Catalogue were minted were partitioned between the governors of the two great garrison cities of Trāk: Başra, where there was a large Khārijite element, and Kūfa, which was a centre for <u>Sh</u>ī'a propaganda. Sometimes, indeed, these two areas were placed by the Caliph under the control of a single governorgeneral, as in the case of Zivād (q.v.), or of the latter's son 'Ubaidallāh (q.v.) and, more especially, of Hajjāj ibn Yūsuf (q.v.). When this happened, this important official would usually reside alternately in each of the two cities above mentioned. Hajjāj, however, in order to keep an eye on the two rival centres of unrest and insubordination, founded (in A.H. 84) the half-way city of al-Wasit ('the Middle One') as a fixed camp for his Syrian troops. But, normally, the governor of Kūfa, higher up the Tigro-Euphrates valley, commissioned the sublieutenants of the provinces of Adharbaijān, Arrān, Ṭabaristān, Jibāl, &c. In a like manner the governor of Basra, in the lower reaches of the valley, had his head-quarters in that city and dispatched his deputies

or sub-governors to the various provinces, such as Fārs, Kirmān, Sīstān, Makrān, Ķūhistān, <u>Kh</u>urāsān, and to the disputed Indian frontier lands. (See map, p. exliii.)

When Yazīd succeeded Mu'āwiya (in A.H. 60) the old quarrel over the Caliphate burst forth anew. 'Abdallah ibn al-Zubair (q.v.) and Husain ibn 'Alī rose in rebellion. The latter, relying on help from the Shī'ī citizens of Kūfa, was doomed to disappointment, and 'Ubaidallāh ibn Zivād (q.v.), the Umaivad governor of the city at that time, was instrumental in crushing him with great slaughter on the calamitous field of Kerbela, an event ever afterwards to be remembered by the 'Alids. On the other hand 'Abdallāh ibn al-Zubair for several years (A.H. 61-73) maintained himself as a rival Caliph in Arabia, in the Eastern Provinces, and in part of Syria. Some of his coins bear his assumed title of 'Commander of the Faithful' written in Pehlevi (pp. 33-6). We have also coins of his brother Mus'ab (q.v.), who was his governor in Başra and also in Kūfa. The career of 'Abdallāh was brought to a tragic close by the formidable Umaiyad warrior Ḥajjāj ibn Yūsuf (q.v.), who, under the Umaiyad Caliph 'Abd al-Malik (q.v.), rose to be the viceroy of the whole of the Eastern Provinces. It was about this time that the important coinage reform, to which we shall return later, took place. New gold and silver coins with Arabic legends only and generally without any effigies or symbols were introduced from about A.H. 75 onwards.¹ The latest date on coins of Arab-Sassanian type issued by the Umaiyads is A.H. 83 (see p. 120). These bear the name of Hajjāj ibn Yūsuf who played an important part in the coinage reform. Sporadically, however, the type survived, as we shall see, in Tabaristan and Bukhārā into the early 'Abbāsid period.

In a.H. 132 the Umaiyads in the East were driven from the Caliphate by their enemies of the house of 'Abbās, aided for the time being by the 'Alid partisans and the heterogeneous Khārijites. The Syrian domination was thus over. Damascus ceased to be the capital. Once again Kūfa was the centre of the Caliphate, although it was not long before it had to give way before the new 'Abbāsid capital of Baghdad (Madīnatal-Salām). Meanwhile the governors of the 'Abbāsid Caliphs in Ṭabaristān, conforming to the local practices of the native rulers whom they finally displaced, issued coins in the Sassanian style with legends in Pehlevi and Arabic. Somewhat later the coins of Bukhārā, also of

¹ These Reformed Currency coins will be dealt with in a subsequent volume of this British Museum Catalogue. Some of those in the British Museum Collection have already been published by Lane Poole in his Catalogue.

a derived Sassanian type, came to be struck in that region with the names in Arabic of the 'Abbāsid Caliphs and governors of the time, together, sometimes, with legends in a form of script derived from Aramaic. The latest of these Arab-Sassanian coin survivals may be dated somewhere during the reigns of the immediate successors of the 'Abbāsid Caliph Hārūn al-Rashīd (A.H. 170–193 = A.D. 786–809), the celebrated contemporary in the Moslem East of the great Charlemagne in the Christian West.

I. The Umaiyad Governors in the East and some of their Predecessors

When the armies of Islam invaded Iran the ruler of that country was Yezdigird III (A.D. 632-651), destined to be the last Sassanian monarch. Driven from one province to another of his doomed empire, he was ignominiously murdered at Merv in A.H. 31. He had thus ruled for practically twenty years, and the dates on his own Sassanian coinage range from 1 to 20. It is this last date (20) that appears on the imitative issues of the Arab governors who ousted him from his dominions. The question whether this date on the Muhammadan coins represents a date in the Yezdigird era, or in the new era of the Hijra, is considered later (p. xxxv). Yezdigird III was the grandson of Khusrau II (A.D. 590-628), whose coinage was so plentiful and well received in the Īrānian provinces that it was taken as the standard type by the invaders. Khusrau's own Sassanian coins range between the years 1 to 39. The new Arab-Sassanian coins-still bearing his name-have dates from 21 to 50, while a few isolated and erratic cases of the survival of the name of Khusrau on Muhammadan issues are also known, but all of a much later date (Catalogue, pp. 23, 125-6).

But contemporaneous with some of these are the coins on which the name of Khusrau has been displaced by that of an Umaiyad Caliph or governor or rebel leader. These were struck between the years A.H. 41 and 83, i.e. from the beginning of the reign of the Caliph Mu'āwiya until almost the end of that of 'Abd al-Malik ibn Marwān. In this short but eventful period we have some thirty-five Arab governors commemorated in the coinage of this particular type. The subjoined chronological summary of the more outstanding personalities and happenings that attended the rapid expansion of Islam in 'Irāk and in the Īrānian provinces serves as an historical setting for the coins of this group and also gives some idea of the relative positions occupied by

the two great military colonies at Kūfa and Baṣra and their respective zones of administration. Many of the governors and sub-governors whose names figure on these coins will be seen to play an important part, especially in the establishment of the Umaiyad rule in these territories. The Biographical Sketches appended to this section will provide fuller details regarding their individual political and mint activities.

Considering that the numismatic records of the governors of this period are so rich, it is a matter for some surprise and regret that there are no coins extant of some of the more outstanding amongst them, such as Mughīra ibn Shu'ba, Sa'īd ibn al-'Āṣ, al-Mukhtār, &c. Future finds, however, may bring them to light. After all it is only within the last ten years that coins with the names of Bishr ibn Marwān, 'Ubaidallāh ibn Abī Bakra, Ṭalḥa ibn 'Abdallāh, 'Aṭīya ibn al-Aswad, and Mughīra ibn al-Muhallab have been discovered or identified for the first time. And there are still several examples amongst the coins of uncertain governors awaiting elucidation. (See pp. 121-4.)

One of the problems arising from a study of these coins is their chronology. It is obvious from a collation of the coin dates with the historical information provided for us by the Arab chroniclers that at least three eras were employed by the moneyers, namely the Hijra reckoning (A.H.), the Yezdigird era (Y.E.), and what I have termed the Post-Yezdigird era (P.-Y.E.). The first is the normal Muhammadan system of dating from the Prophet's Flight (Hijra) to Medina in A.D. 622. The other two are peculiar to the Eastern Provinces. They are a heritage from the Sassanian empire in which no fixed era was employed in common by all the successive rulers of that dynasty. Instead, a new system of dating started with the accession of each new monarch in turn. The Yezdigird era began in the year when Yezdigird III ascended the throne of his forefathers (A.D. 632). As he was the last Sassanian ruler, local sentiment favoured its continuance after his death. But a more natural system of dating that would appeal to Īrānian patriotism was the use of a new era reckoned from the year following the death of Yezdigird III in A.D. 651. This third era, which is the regular one employed on the 'Abbāsid coins of Ṭabaristān has for that reason usually been called the Tabaristan era. There is evidence, however, of its use outside that province,2 as in the case of some of

² 'This era was once in general use in most parts of Persia and more especially in Tabaristān, Gīlān, Qum, and perhaps some of the central provinces of Persia, as well as with the Zoroastrians of <u>Kh</u>orāsan and Transoxiana' (Taqizadeh, op. cit., p. 918). It is

^{1 &#}x27;It is still used by the Zoroastrian community in Iran and by their Parsi coreligionists in India' (Taqizadeh, B.S.O.S., 1938, p. 917).

the coins in this Catalogue, and so a more apt name for it is the Post-Yezdigird era. Both of the Īrānian eras are solar, whereas the Muḥammadan one is lunar. A table covering the dates which concern us in this Catalogue will be found on pp. 237 f.

It is not always easy to be certain which particular era is involved in the dates of some of the Umaiyad coins. All three eras are actually used in the case of some governors, though apparently not all at the same mint. The chronological details are included in the Biographical Sketches and the Mint Notes (q.v.).

In compiling the following historical summary of this particular period I have found the late Prince Caetani's Chronographia Islamica invaluable. In the columns marked Kūfa and Baṣra there have been indicated the main historical details of conquest, governorships, &c., appertaining to their respective zones. Attention is drawn to the map on p. cxliii, which will be helpful in following the progress of events. In some cases the dates transmitted to us by the Arabic annalists are at variance with one another. The importance of the coins lies in their providing us with contemporary data for corroborating, supplementing, or at times correcting the historians. Even so there are numerous cases where the coin evidence cannot be reconciled with the historical tradition. These are commented on in the Biographical Sketches where they occur.

Historical Summary (A.H. 16-83)

A.H. KŪFA BAṢRA

16

Baṣra founded.
Governor: Mughīra ibn Shu'ba.

17

Kūfa founded.
Governor: Sa'd ibn Abī
Waķķāṣ.

Mughīra deposed; Abū Mūsā alAsh'arī appointed.
Military expedition to Khūzistān.
Manādhir, Nahr-Tīrā, Sūķ al-Ahwāz,
and al-Sūs reported taken.

20 Sa'd deposed; 'Ammār ibn Yāsir appointed.

called $Ta'r\bar{\imath}kh$ al-Majūs, i.e. the era of the Magians, or Zoroastrians, and, according to Taqizadeh (p. 922), continued to be employed by the Zoroastrian community as late as the sixteenth and seventeenth centuries A.D. Taqizadeh's conclusion (*ibid.*) is 'that the real name of the era was Pārsīk, that it was expressed by the words "20 years after Yazdegerd" written after the Magian date, which meant that the beginning of the era was twenty years after the era of Yazdegerd, and that the latter became the exclusive means of dating, with the Zoroastrians, only in the last few centuries, and at any rate after the sixteenth century.'

	INTRO	DUCTION
A.H.	KŪFA	BAŞRA
21	'Ammār deposed; Mu <u>gh</u> īra appointed. Battle of Nihāvand. Arab victory. al-Raiy taken.	Rāmhurmuz, Tustar, Jundaisābūr, al-Sūs, &c., reported captured.
22	Ardabīl taken. Expedition to al-Bāb.	Conquest of <u>Kh</u> ūzistān.
23	The governor of Kūfa captures al-Raiy and Hamadhān.	The governor of Baṣra begins the conquest of Fārs. Sābūr (Bi <u>sh</u> āpūr), Arrajān, &c., taken.
24	Mughīra deposed; Sa'd ibn Abī Waķķās appointed.	Māh al-Baṣra and Ispahān taken.
26	Sa'd deposed and al-Walīd ibn 'Ukba appointed. Invasion of Adharbaijān, which was in revolt.	Sābūr and Iṣṭa <u>kh</u> r taken (again).
27		Peace made with Arrajān and Dārāb- jird.
28	A <u>dh</u> arbaijān subdued,	
29		Abū Mūsā deposed; 'Abdallāh ibn 'Āmir appointed. Reconquest of Fārs. Iṣṭa <u>kh</u> r, Dārāb- jird, and Ispahān recaptured.
30	al-Walīd deposed; Sa'īd ibn al-'Āṣ appointed. Sa'īd ibn al-'Āṣ conquers Ṭabaristān.	'Abdallāh ibn 'Āmir continues subjugation of Fārs. Kirmān occupied. Expedition to Khurāsān and Kūhistān. Defeat of Ephthalites. Herāt and Abrashahr taken. Conquest of Sīstān and Makrān.
32	Another expedition to A <u>dh</u> arbaijān.	Merv al-Rūdh taken. Treaty with people of Bal <u>kh</u> . The new province of <u>Kh</u> urāsān is put in charge of Ķais ibn al-Hai <u>th</u> am.
33	Revolt in Kūfa against the Caliph Othman. Movement in favour of 'Alī.	Rebellion in <u>Kh</u> urāsān suppressed by 'Abdallāh ibn <u>Kh</u> āzim, who is made governor of the province. The revolt against the Caliph Othman spreads to Baṣra.

A.H.	KŪFA	BAŞRA
34	The Kūfans refuse to have Sa'īd ibn al-'Āṣ as governor, and Abū Mūsā is appointed in his stead.	
36	Abū Mūsā supports 'Alī.	Battle of the Camel. Victory for 'Alī. 'Alid governors in Başra ('Abdallāh ibn 'Abbās) and in <u>Kh</u> urāsān (<u>Kh</u> ulaid).
37	Abū Maṣ'ūd 'Alid governor.	Revolt in Abrashahr and Merv.
38	Khārijite revolt in Kūfa. Alī suppresses it.	The citizens of Başra rise against 'Alī, and Ziyād ibn Abī Sufyān ('Alī's lieutenant) is unable to restrain them.
39		Insurrection in Fārs and Kirmān against taxation. Ziyād is sent by the 'Alid governor of Baṣra to suppress it. He is successful.
40	'Alī assassinated.	Disorder in Başra. 'Alī's governor withdraws to Mecca. Ziyād is placed in charge of the land-tax $(\underline{Khar\bar{a}j})$.
41	Mu'āwiya, as Caliph, appoints 'Abdallāh ibn 'Amrgovernor of Kūfa; then Mughīra ibn Shu'ba. Governor of Raiy is Kathīr ibn Shihāb. Khārijites defeated by Mughīra near Kūfa.	'Abdallāh ibn 'Āmir governor of Baṣra for Mu'āwiya. Governor of Khurāsān is Ķais ibn al-Haitham; of Sīstān 'Abd al-Raḥmān ibn Samura. Ziyād ('Alid supporter) is governor of Fārs. Khārijites suppressed by ibn 'Āmir near Baṣra.
43		'Abdallāh ibn \underline{Kh} āzim governor of \underline{Kh} urāsān.
44		'Abdallāh ibn 'Āmir deposed; succeeded by Ḥārith ibn 'Abdallāh.
45		Hāri <u>th</u> deposed (after four months); Ziyād appointed. <u>Kh</u> urāsān governed by Ḥakam ibn ʿAmr al- <u>Gh</u> ifārī. <u>Kh</u> ārijite revolt near Baṣra quelled.
46		Rabī' ibn Ziyād governor of Sīstān.
4 8		Ziyād's governor in <u>Kh</u> urāsān is <u>Gh</u> ālib ibn Fadāla.

KŪFA BASRA A.H. Mughīra dies; succeeded by 49 Ziyād appointed by Mu'āwiya over Zivād as governor of both both Kūfa and Başra. Kūfa and Basra. 50 Ziyād orders suppression of Samura ibn Jundab sub-governor Khārijites. for Ziyād in Baṣra. Khārijite revolt suppressed. 'Ubaidallāh ibn Abī Bakra sent by Ziyād to govern Sīstān. Khulaid ibn 'Abdallāh appointed by Ziyād as governor of Khurāsān. Ziyād advances into Kühistān and subdues it. Sinān ibn Salama, governor of Sind, subdues Makrān. 51 'Amr ibn Ḥuraith deputy-Khulaid ibn 'Abdallāh, governor of Khurāsān, succeeded by Rabī' ibn governor for Ziyād in Kūfa. Ziyād, who later attacks Balkh and Alid revolt suppressed. drives the Ephthalites into Kühistän. 52'Ubaidallāh ibn Abī Bakra, governor of Sīstān, makes treaty with ruler of Kābul. Khārijite revolt suppressed in 'Irāk. 53 Death of Ziyād (but see Samura still governor of Başra. p. xliv). Khurāsān: Rabī' ibn Ziyād dies and is succeeded by his son 'Abdallāh as Abdallāh ibn <u>Kh</u>ālid governor of Kūfa; later Daḥḥāk governor. The latter dies after two ibn Kais (? cf. year 55). months and is succeeded by Khulaid ibn 'Abdallāh. (On the death of Zivād ibn Abī Sufvān his son 'Ubaidallāh is appointed by Mu'āwiya.) 'Ubaidallāh, governor of Sīstan, deposed; 'Abbād ibn Ziyād appointed (until A.H. 60). 54 Dahhāk sends Maşkala ibn Samura deposed. Hubaira on an ill-fated ex-'Abdallāh ibn 'Amir ibn Ghailān governor for six months; then sucpedition to Tabaristān. ceeded by 'Ubaidallāh ibn Ziyād, governor of Khurāsān. 'Ubaidallāh, after crossing the Oxus, fighting the Turks, and making a treaty with the Prince of Bukhārā, returns to Basra. 'Abdallāh ibn Khālid de-'Ubaidallāh appoints Aslam ibn Zur'a 55 posed by Mu'āwiya, and governor of Khurāsān.

Dahhāk ibn Ķais appointed

(? cf. year 53).

xxxii	INTROI	DUCTION
A.H. 56	KŪFA	BAṢRA Sa'īd ibn 'Uthmān goes, with Mu'ā-wiya's permission, to Khurāsān with Muhallab ibn Abī Şufra. Expedition across the Oxus; defeat of Sogdians.
58	Daḥhāk deposed by Mu'ā-wiya; 'Abd al-Raḥmān ibn 'Abdallāh appointed, but later expelled by the citizens and sent by Mu'āwiya to govern Egypt.	<u>Kh</u> ārijite revolt suppressed by 'Ubaidallāh's soldiers.
59	Nu'mān ibn Ba <u>sh</u> īr appointed governor of Kūfa.	Sa'īd recalled from Khurāsān. 'Abd al-Rahmān ibn Ziyād, appointed by Mu'āwiya, arrests Aslam ibn Zur'a. Sīstān, governor 'Abbād ibn Ziyād; Kirmān, Sharīk ibn al-A'war.
60	Nu'mān deposed by Yazīd, and 'Ubaidallāh ibn Ziyād appointed over both Kūfa and Baṣra.	Salm ibn Ziyād appointed to govern Khurāsān by the new Caliph Yazīd.
61	'Alid defeat at Kerbela.	Salm ibn Ziyād, governor of both Sīstān and <u>Kh</u> urāsān, appoints his brother Yazīd ibn Ziyād over Sīstān. Salm makes expedition into Trans- oxiana.
63		Salm ibn Ziyād deposes his brother Yazīd and appoints Ṭalḥa ibn 'Abdallāh as governor of Sīstān. Khālid ibn 'Abdallāh sub-governor in Kābul for a year.
64	The citizens of Kūfa rise in favour of 'Abdallāh ibn al-Zubair. Zubairid governor 'Āmir ibn Maṣ'ūd (for three months), followed by 'Abdallāh ibn Yazīd. Shī'ite movement led by al-Mukhtār.	'Ubaidallāh ibn Ziyād driven out of Baṣra by supporters of 'Abdallāh ibn al-Zubair. Zubairid governor 'Abdallāh ibn al-Ḥārith until arrival of 'Umar ibn 'Ubaidallāh. In Khurāsān Salm ibn Ziyād is ousted by 'Abdallāh ibn Khāzim.
65	'Abdallāh ibn Yazīd de- posed and 'Abdallāh ibn Muṭī' appointed.	Muhallab ibn Abī Şufra sent to fight against the \underline{Kh} ārijites by the people of Baṣra.

A.H.

KŪFA

66 al-Mukhtār successfully gets control of Kūfa and extends his authority throughout 'Irāk.

67 Muş'ab ibn al-Zubair, along with Muhallab ibn Abī Şufra, attacks Mukhtār in Kūfa. The latter is killed, and Muş'ab with his lieutenants takes over Kūfa and the 'Irāķian provinces. Muhallab is made governor of Mosul, al-Jazīra, Adharbaijān, and Armenia, while 'Umar ibn 'Ubaidallāh ibn Mi'mar is in charge of Fārs.

68 Muş'ab appoints al-Ḥārith ibn 'Abdallāh as his deputy in Kūfa.
al-Muhallab continues to wage war against the Khārijites.

70

71 Muş'ab killed in the reor conquest of 'Irāk by the 72 forces of 'Abd al-Malik.

forces of 'Abd al-Malik.
The new governor of Kūfa (for forty days) is Kaṭan ibn 'Abdallāh. Thereafter he is succeeded by the Caliph's brother Bishr ibn Marwān.

Muhallab, still engaged in the suppression of the Khārijites under their leader Kaṭarī, forsakes the Zubairid cause, and offers allegiance to the Umaiyad Caliph. Mukātil ibn Misma' is governor of Ardashīr-Khurra

(see p. lvii).

BASRA

Zubairid governor: al-Ḥārith ibn 'Abdallāh ibn Abī Rabī'a sends 'Abdal-'Azīz ibn 'Abdallāh ibn 'Āmir to govern Sīstān.

Muṣ'ab ibn al-Zubair appointed governor of Baṣra.

Muş'ab deposed; Ḥamza ibn 'Abdallāh ibn al-Zubair appointed governor of Baṣra.
Campaign against the Khārijites.

Mus'ab governor of Başra for second time.

Civil war in Sīstān; the Zubairid governor 'Abd al-'Azīz ibn 'Abdallāh ibn 'Āmir for a short time driven out of the capital Zaranj.

During the absence of Mus'ab from Başra Khālid ibn 'Abdallāh starts a rebellion in favour of the Umaiyad Caliph 'Abd al-Malik, but has to retire to Syria.

Rivalry between Ḥumrān ibn Abān and 'Ubaidallāh ibn Abī Bakra for the governorship of Basra.

The Umaiyad Caliph ultimately appoints Khālid ibn 'Abdallāh.

The governor of Khurāsān, 'Abdallāh ibn Khāzim, refuses to recognize the Umaiyad Caliph. In the resulting civil disorder he is killed (A.H. 72). Bukair ibn Wishāh becomes governor.

c

A.H.	KŪFA	BAṢRA
73	'Amr ibn Ḥurai <u>th</u> sub- governor for Bi <u>sh</u> r ibn Marwān in Kūfa.	Khālid ibn 'Abdallāh deposed; Bishr ibn Marwān appointed governor of both Kūfa and Baṣra.
74	Muhallab ordered by the Caliph 'Abd al-Malik to resume offensive against the Khārijites.	Sudden death of Bishr ibn Marwān. Umaiya ibn 'Abdallāh made governor of Khurāsān. 'Abdallāh ibn Umaiya ibn 'Abdallāh, governor of Sīstān, leads futile cam- paign against the Turks.
75	Ḥajjāj ibn Yūsuf appointed governor of Kūfa and Baṣra.	$\underline{\underline{Kh}}$ ālid ibn 'Abdallāh driven out of Başra.
77	Kaţarī, the <u>Kh</u> ārijite Caliph, is driven into Ṭabaristān and killed (in 79?).	Umaiya ibn 'Abdallāh, governor of Khurāsān, sends his lieutenant in Tukhāristān, Bukair ibn Wishāh, to raid Transoxiana. Bukair starts a rebellion in Merv, but is betrayed and killed. Ḥajjāj appoints over Fārs and Kirmān: (1) Ķaṭan ibn Ķabīsa, and (2) al-Ḥakam ibn Nahīk.
78	al-Mughīra ibn 'Abdallāh appointed sub-governor of Kūfa by Ḥajjāj.	Umaiya deposed. Ḥajjāj resumes control of Khurāsān and Sīstān. He appoints the victorious Muhallab over the former and 'Ubaidallāh ibn Abī Bakra over the latter province.
79		Ḥajjāj obtains the control of Baḥrain and 'Umān in addition to the other provinces he already governs. From Sīstān 'Ubaidallāh attacks the Turks. He dies after the disastrous defeat of his army.
80		'Abd al-Raḥmān ibn Muḥammad ibn al- $A\underline{sh}$ 'a \underline{th} appointed to Sīstān by Ḥajjāj.
81		Rebellion of 'Abd al-Raḥmān against Ḥajjāj. Baṣra besieged.
82	'Abd al-Raḥmān ibn Mu- ḥammad attacks Kūfa.	Muhallab dies and is succeeded by his son Yazīd as governor of \underline{Kh} urāsān.
83	Ḥajjāj finally victorious.	

Biographical Sketches, with Notes on the Chronology of the Coins

The following brief outlines of the significant events in the lives of those rulers and governors whose names figure on the Arab-Sassanian coins of the Umaiyad Period are arranged below according to the sequence of the Catalogue. At the end of each sketch the chronology of the coins of each personage is considered. A few observations are prefaced regarding the three Sassanian kings whose names are also found on those Muḥammadan coins.

(a) Yezdigird III (A.D. 632-651/2). The last ruling monarch of the once powerful Sassanian dynasty, Yezdigird witnessed the rapid encroachment of the Arab power on his dominions. The Sassanian coins which were issued by his authority are dated for each of the twenty years of his reign. The coins which the new rulers of Īrān struck for a brief space after Yezdigird's downfall and death still actually bore his name but had Arabic legends in the margin. They all bear the date 20 (VIST) in Pehlevi.1 This can only be regarded as a relic of the last coins issued by the defeated monarch himself, although, strange to say, it has been accepted by scholars of repute as being a date in the Muhammadan era. If it were so-and apart from any other arguments adducible against it-it would indeed be a remarkable coincidence that the last year of Yezdigird III, viz. 20 (which equals A.H. 31) should be the same numerically as the first year according to the Muḥammadan era (i.e. A.H. 20) in which the invaders produced their first dated coins, and that all these Muhammadan coins with the name of Yezdigird should bear the same year. If this were indeed a Hijra date, why do we not find later instances dated up to A.H. 31, the year of Yezdigird's tragic end? It is rather significant that the coins with Yezdigird's name issued by the Muhammadans should be confined to the momentous year which marked the collapse of the Sassanian, and the triumph of the Islamic power.

Nützel in his Berlin Museum Catalogue² has correctly interpreted the date on these coins as being in the Yezdigird era. Moritz in his article on Arabic script in the *Encyclopaedia of Islam* (vol. i, p. 383) has assumed, in spite of Nützel to whom he refers, that the Hijra era is intended. Tiesenhausen in his *Corpus* (p. 10) also regarded the date as in the Muḥammadan reckoning, and the same holds good

² Vol. i, p. 398.

¹ A reported example with Yezdigird's name and the year 21 has been vouched for by only one authority, but never illustrated. See M. 1, below, p. 5, and p. exxvi.

of such able numismatists as Thomas (J.R.A.S., 1850, p. 280), Stickel (Handbuch, ii, p. 83), and Mordtmann in his earlier work (Z.D.M.G., 1854, p. 171). The latter has been followed in this conclusion by Caetani (Chronographia Islamica, p. 288, et passim). Although Lavoix in his Paris Catalogue had no example of this year, he definitely (vol. i, p. vii) ascribed the earliest coins of Arab-Sassanian type to the Caliphate of Omar (A.H. 13-23), as did also Ghalib Edhem in his Istanbul Museum Catalogue (p. 2).

Mordtmann afterwards revised his view. In Z.D.M.G., 1879, p. 83, he argued rightly that the Arabs in the year A.H. 20 were not in possession of Iran and therefore could not be credited with striking such coins at such an early date. The majority of these coins, moreover, have the mint-signature no. 52 a in Pehlevi. This has usually been interpreted as = IZD, i.e. Yezd. If this were the case, a Hijra date for the Arab pieces would be impossible since the capture of that city had not been effected at that time. The possibility that the mintsignature in question, however, is not Yezd but, as the present writer is more inclined to believe, sk, i.e. Sīstān, does not invalidate Mordtmann's line of argument. Besides, we have the remarkable coin in the British Museum (no. 1) which is of this date and bears a mint-signature (no. 40) which almost certainly stands for Merv, a place still farther removed from the sphere of Arab conquest at the time proposed. The most tenable conclusion, therefore, that we come to is, that the date on the Arab coins which have the name Yezdigird is reckoned in terms of the native era of Yezdigird (Y.E.), and that in consequence, Y.E. 20 = A.H. 31. But it must also be borne in mind that the certified mintsignatures on the Arab-Sassanian coins of Yezdigird III (no. 60 = BJ?; no. 40 = MR, and no. 52a = SK) are also known on the regular Sassanian issues of the year 20 of that monarch. There is, then, always the possibility that the Arabs not only copied his name but also the mintsignature and date without any regard to actual time or place of minting, although, if this were the case, it is remarkable that their imitations should be confined to one particular year.

(b) <u>Khusrau II</u> (A.D. 590-628). This celebrated Sassanian king—grandfather of Yezdigird III—who extended his great empire so far to the west as to embrace for a few years even Jerusalem, left such abundant numismatic material behind him that practically every find of late Sassanian coins that is made is certain to contain specimens with his name. The fact that his coins were so plentiful and acceptable to the Īrānians no doubt influenced the Arab conquerors in selecting

his particular coinage for many years as a standard type. It was a masterly stroke of policy on their part. Unlike their temporary use of the Yezdigird III type, the Arabs continued the Khusrau II type with that monarch's name in Pehlevi beyond the initial year of striking (21) and for practically every year—so far as we know—until at least the year 50 (if not until 63?). We even find a recrudescence of the type accompanied by his name as late as A.H. 74 about the time when several experiments were being tried out during 'Abd-al-Malik's famous coinage reform. Many—if not all—of the Arab-Sassanian coins with his name, having their mints and dates written in Pehlevi, must be dated in terms of the Yezdigird era.

(c) Hormuzd IV (A.D. 579-590). Hormuzd IV—the father of Khusrau II—had the numismatic distinction conferred on him of having his coinage copied after his death by the princes of Georgia during the sixth and seventh centuries of the Christian era. The discovery of the unique Arab-Sassanian piece in the Istanbul Museum (I. 12, p. 24), with marginal legends in Arabic, but with the unmistakable effigy and the name of Hormuzd IV, opens up a new line of inquiry. The coin is undated; but the character of the obverse marginal legend is typical of the later coins in the Umaiyad group, though on epigraphic grounds a still later date is more probable. The parallelism with Georgia might suggest that district as a possible mint provenance, but Muḥammadan control did not extend there until the eighth century A.D.

A. Umaiyad Caliphs and Governors

(a) $Mu'\bar{a}wiya$ (معوية), A.H. 41-60 = A.D. 661-680

Mu'āwiya ibn Abī Sufyān, the first Caliph of the Umaiyad dynasty, took a prominent part in the extension of the Arab régime in the early days of Islam, particularly in Syria, of which province he was governor for some twenty years. The assassination of the Caliph Othman (in A.H. 35) brought Mu'āwiya into conflict with 'Alī, resulting in his own successful recognition (in A.H. 41) as Caliph. A powerful opponent in Īrān, Ziyād ibn Abī Sufyān (q.v.), was won over from the 'Alid cause by the diplomatic move of recognizing him as Mu'āwiya's step-brother. Thereafter he served as a sturdy buttress of the Umaiyad house. Under Mu'āwiya the capital was fixed at Damascus, and from there, as political centre, the Caliph controlled and consolidated the far-flung domains of the Caliphate by a rigid devotion to duty, the organization of the army,

¹ See Victor Langlois, Suites monétaires de la Géorgie, p. 29.

and the wise appointment of reliable administrators in the provinces. In the twentieth year of his Caliphate he died (A.H. 60) leaving behind him a reputation as an enlightened ruler, whose glorious reign not even the calumnies of his political opponents could manage to sully. He may not unjustly be claimed as the Arab monarch par excellence. Before he passed away, by a last act of statesmanship he arranged for allegiance (bai'a) to be paid to his son Yazīd as his successor.

One of Mu'āwiya's reforms, which has an indirect bearing on our subject, was his conversion of the old collective wealth of the Moslems (مال المسلمين) into what was technically termed 'the property of Allah' (مال الله), that is, the State Treasury. It would not be surprising in the circumstances if Mu'āwiya, while involved in such financial adjustments, also sought to alter the coinage, and in fact he is credited with having tried to do so.¹

The Arab-Sassanian coins with the name of Mu'āwiya are somewhat rare. The only known specimens are all of the mint of Dārābjird and dated in the year 41, which, if in terms of the Hijra era, means that they must have been struck to mark the accession of Mu'āwiya to the Caliphate. Similar coins of the same mint and date are also known to us, struck not only in the name of Mu'āwiya's right-hand man in the Eastern Command, Ziyād ibn Abī Sufyān, and of the latter's deputy in Baṣra Samura ibn Jundab, but also of 'Abdallāh ibn 'Āmir. The latter was certainly appointed to Baṣra and its dependencies in A.H. 41, whereas Ziyād and his deputy Samura did not occupy this important governorship until A.H. 45 and 50 respectively. Obviously, different eras are necessary to explain the apparent contradiction. Besides these governors the following also held office under Mu'āwiya and issued coins with their own names: 'Ubaidallāh ibn Ziyād and 'Abd al-Raḥmān ibn Ziyād.

(b) 'Abd al-Malik ibn Marwān (عبد الملك بن مروان) A.H. 65-86 = A.D.685-705

The task that confronted 'Abd al-Malik ibn Marwān, when he succeeded to the Caliphate on the murder of his father, was not an enviable one. On all sides was disruption. The principal centres of disaffection lay in the East—principally in the Ḥijāz and in 'Irāķ.

¹ Makrīzī, <u>Shudh</u>ūr al-'Ukūd, edited by L. A. Mayer, Pt. I, p. £. But the reference is to coins of the Arab-Byzantine 'Standing Caliph' type which do not concern us in this volume of the Catalogue.

'Abdallāh ibn al-Zubair (q.v.) had for some time now established his court at Mecca as a rival Caliph, with his governors actually in possession of the important fortress-cities of Kūfa and Baṣra. The manner in which 'Abd al-Malik overcame this formidable opposition and succeeded in unifying the vast expanse of his ever-increasing dominions, is a tribute to his masterly handling of the situation and his good fortune in securing the loyalty of several extremely able generals. Three of these have left their names on the coinage of the period—Mūsā ibn Nuṣair,¹ who carried the sword of Islam across North Africa into Spain; al-Muhallab ibn Abī Ṣufra (q.v.), who suppressed for the time being the fanatic sectarians of Īrān; and last and most renowned of all, al-Ḥajjāj ibn Yūsuf (q.v.), who may truly be said to have been the mainstay of the Umaiyad cause.

Besides dissension from within the ranks of the Faithful, 'Abd al-Malik had also to contend with the constant menace of the Byzantines on his frontiers. In the early part of his reign he was actually forced to pay a large annual tribute to them in order to maintain a semblance of peace. Incidentally, it was this indemnity that, according to the Arab tradition, led to 'Abd al-Malik's celebrated reform of the coinage, together with the employment of Arabic as the official language on all government documents, thus displacing Greek, Latin, Coptic, and Pehlevi.

The progress of events in the East in 'Abd al-Malik's Caliphate may be briefly epitomized here. Kūfa had been captured from 'Abdallāh ibn al-Zubair's governor by a pretentious opportunist named al-Mukhtār ibn Abī 'Ubaid, who also managed to defeat an army sent against him by 'Abd al-Malik. He was, however, finally defeated in battle and killed (in A.H. 67) by Mus'ab ibn al-Zubair (q.v.), the brother of the rival Caliph who then held control of Başra, and who had joined forces with al-Muhallab ibn Abī Şufra, who had not yet been won over to the side of 'Abd al-Malik. The removal of al-Mukhtar left the Caliph face to face with the two sons of al-Zubair, Mus'ab and 'Abdallah. The former was killed in A.H. 72 and 'Irāķ paid homage to the conqueror. The latter continued to control Arabia from Mecca until, having been besieged there by Ḥajjāj in command of the Caliph's troops, he was captured and put to death in A.H. 73. The victorious Ḥajjāj was rewarded with the governorship of the Hijāz, to be followed soon after in A.H. 75 by that of 'Irāķ, which virtually led to his complete control of the Eastern Provinces. Together with al-Muhallab ibn Abī Şufra, who

¹ His name occurs on certain coins of Arab-Byzantine type with Latin legends which will be dealt with in a subsequent volume of this Catalogue.

had wisely paid allegiance to 'Abd al-Malik on the defeat of Muṣ'ab, he waged a bitter campaign against the <u>Khawārij</u>, or religious sectarians, who were a continual source of annoyance to the Umaiyad cause particularly in 'Irāķ and Īrān. The debt that 'Abd al-Malik owed to Ḥajjāj is inestimable, and the great viceroy lived to serve in the same vigorous manner during the brilliant reign of the Caliph's son and successor al-Walīd.

There is a striking parallelism between the Caliphate of 'Abd al-Malik and that of Mu'āwiya. Both found their empire in disorder, and managed to consolidate and enlarge it; Mu'āwiya with the help of Ziyād, 'Abd al-Malik with that of Ḥajjāj. Mu'āwiya is credited with introducing a new type of coinage (the 'Standing Caliph' type)¹ and 'Abd al-Malik, in an even more pronounced manner, refashioned the whole currency. Both of them plotted to ensure the dynastic succession for their progeny, and both succeeded in so doing, although it was only the timeous demise of 'Abd al-'Azīz, his brother, who was governor of Egypt, that furthered 'Abd al-Malik's schemes on behalf of his own son al-Walīd, by removing a dangerous potential claimant.

Under 'Abd al-Malik the following governors, his partisans, issued coins in the Eastern Provinces:

'Ubaidallāh ibn Ziyād.
Salm ibn Ziyād.
Muķātil ibn Misma'.
al-Mughīra ibn al-Muhallab.
Umaiya ibn 'Abdallāh.
Khālid ibn 'Abdallāh.
Bishr ibn Marwān.
'Ubaidallāh ibn Abī Bakra.
Ḥumrān ibn Abān.
al-Muhallab ibn Abī Ṣufra.
al-Ḥajjāj ibn Yūsuf.

Arab-Sassanian coins with 'Abd al-Malik's name and title 'Commander of the Faithful' in Pehlevi are by no means common, and those with his own and his father's name are still rarer. The latter emanate from the mint of Merv, year 75. His other mints are Ardashīr-Khurra, year 73, and Dārābjird, years 60 and 65. There is a very doubtful instance of the Bishāpūr mint. All his dates are in terms of the Hijra era, with the exception of those on the Dārābjird coins, which must be according to the Yezdigird era, i.e. A.H. 72 and 77.

¹ See note, p. xxxviii, above.

(i) 'Abdallāh ibn al-Zubair (عد الله بن الزير)

'Abdallah was the nephew of 'A'isha, the Prophet's widow, and one of the leading members of the Islamic aristocracy. He is said to have had the distinction of being the first child born into Islam in Medina in the first year of the Hijra. Although only in his fourteenth year he was present at the Battle of Yarmük (A.H. 15 = A.D. 636). In succeeding years he gained military experience in the conquests both of Egypt and North Africa. In A.H. 30 he was sent, along with Sa'īd ibn al-'Āṣ, in the expedition against Khurāsān. During the disruptive events occasioned by the assassination of the Caliph Othman (in 35), 'Abdallāh ibn al-Zubair played a prominent part. At the disastrous 'Battle of the Camel', in the following year, he commanded the infantry of his aunt 'A'isha in her ill-fated revolt in which Talha and Zubair, 'Abdallāh's father, both perished. When Mu'āwiya succeeded in securing the Caliphate (in 41) after his victory over 'Alī, 'Abdallāh ibn al-Zubair apparently bided his time. In A.H. 56, when Mu'āwiya considered his position as Caliph to be secure, the grandees of Islam were invited to take the oath of allegiance to his son Yazīd as heir apparent. Such an action was without precedent in Islam, the succession to the Caliphate having been formerly decided by election. 'Abdallah ibn al-Zubair, naturally, resented Mu'āwiya's move, but as long as Mu'āwiya lived he accepted the situation. On the accession of Yazīd (in 60), however, 'Abdallah and the Prophet's grandson Husain revolted. Husain, with his companions, fell on the tragic field of Kerbela. 'Abdallah made a bolder stand. It was not long before he was openly asserting his claims to the Caliphate, and Yazīd had to dispatch an army to subdue the rebel. Medina was sacked in 63, and in the following year the Sacred City of Mecca, where 'Abdallah had fixed his head-quarters, was besieged. If he thought the Holy Place would provide him with the benefit of sanctuary he was mistaken. During the hostilities the Ka'ba itself was burned to the ground and Mecca might have met the same fate as befell Medina, had not news arrived of the Caliph's demise. The weakness of his son Mu'āwiya II, who succeeded him, only served to strengthen 'Abdallāh ibn al-Zubair's cause, and in a short time the latter was acknowledged Caliph not only in the two Sacred Cities of Arabia, but in Egypt and, to some extent, even in Syria. The two strongholds in 'Irāķ, Başra and Kūfa, sided with him, while the Īrānian provinces were seething with Khārijites and members of the Shī'at 'Alī, all bitter opponents of the house of Umaiya. Thus only a small portion of Syria remained

loyal to the orthodox Caliph at Damascus. This was 'Abdallāh ibn al-Zubair's great opportunity. He lost it by remaining behind in Arabia.

Mu'āwiya II after a brief reign of three months died, and Marwān, an able member of another branch of the Umaiyad family, was, in the circumstances, elected to succeed him as Caliph. The choice was a fortunate one. Marwān succeeded in regaining much that had been lost, but he enjoyed his high office for barely a year before he was murdered by an offended wife. The son who succeeded him (in 65), however, 'Abd al-Malik ibn Marwān (q.v.), was destined to stabilize the Umaiyad dynasty. With the aid of his powerful generals, particularly al-Ḥajjāj ibn Yūsuf (q.v.) and al-Muhallab ibn Abī Ṣufra (q.v.), the new Caliph brought about the downfall of 'Abdallāh ibn al-Zubair and his adherents. 'Abdallāh's brother Muṣ'ab (q.v.) was killed in 72; and the coup de grâce was given in 73 when 'Abdallāh himself was captured and put to death by Ḥajjāj.

'Abdallāh's coins are divisible into two classes: (a) those bearing his name in Pehlevi, 'Abdallāh son of al-Zubair; and (b) those bearing his name and title in Pehlevi, 'Abdallāh Commander of the Faithful.

His known mints and dates are as follows:

Class (a): Arda<u>sh</u>īr-<u>Kh</u>urra, years 65?, 66, and 67 Kirmān, years 62, 63, 66-69 Zaranj?, year 69?

Class (b): Dārābjird, years 53, 54, 56, 57, 60 Kīrmān, year 67 Iṣṭa<u>kh</u>r, years 63? and 66.

All the above dates are in terms of the Hijra era, except those from the mint of Dārābjird, which must be in the Yezdigird era, since 'Abdallāh did not assume the title of *Commander of the Faithful* until A.H. 61.¹ Therefore these particular coins were issued between the years A.H. 65–72, that is, practically until the year of his death.

The following governors, his partisans, issued coins in their own names under 'Abdallāh ibn al-Zubair, as rival Caliph (A.H. 61-73): Muṣʿab ibn al-Zubair, his brother; 'Umar ibn 'Ubaidallāh; 'Abdallāh ibn <u>Kh</u>āzim.

The coins with the name of 'Abdallāh's other supporter al-Muhallab ibn Abī Ṣufra (q.v.) were all struck after the latter had gone over to the Umaiyad party.

(ii) Ziyād ibn Abī Sufyān (زياد بن ابي سفيان)

Ziyād has been deemed by some the greatest man of his age. The uncertainty that obscured his paternity has been often simplified by ¹ Mordtmann, S.K.B.A., 1871, p. 680, wrongly dates his claim to the title to A.H. 64.

referring to him as Ziyād ibn Abīhi, 'Son of his father'. Whether he actually was the son of Abū Sufyān, and in consequence the stepbrother of the Caliph Mu'āwiya will never be known. Mu'āwiya, however, very diplomatically recognized the supposititious relationship in order to win Ziyād over from the 'Alid cause into his own service. In A.H. 44 Ziyād was officially accepted as the Caliph's brother, and in the following year (45) was granted the important command of Basra and its appanages. Although the task before him was far from an easy one, Ziyād was the very man for quelling the rebellious elements in the Eastern Provinces, a duty which his predecessors had failed to perform. Only one year previously 'Abdallāh ibn 'Āmir (q.v.) had been deposed for leniency. Ziyād, in this respect, was his antithesis. From the outset, when he startled the citizens of Basra with his stern inaugural address, he crushed all opposition with unflinching severity. In A.H. 49 or 50 the grateful Caliph gave him the additional responsibility of controlling Kūfa. He was thus the first governor to possess the dual control of the two great garrison-cities of the Eastern Caliphate. He spent six months alternately in each of them; and during his absence the administration was left in the hands of a deputy governor. In Basra he appointed Samura ibn Jundab (q.v.); in Kūfa, 'Amr ibn Huraith. Of the former of these sub-lieutenants coins are known (p. 46).

As Viceroy in the two 'Irāķs Ziyād's sway extended far beyond into Arabia and the Eastern Provinces. The traditional date of his death is given as the year A.H. 53.2 The coins struck with his name, however, bear dates which do not seem to support this conclusion. Mordtmann³ naturally made the same deduction and arrived at the date 56 for Ziyād's death, since, according to him, he knew of coins with Ziyād's name of this date. This last point I have disputed (see Catalogue, M. 24, p. 44).⁴ The latest verifiable date for a coin of Zīyād known to me is A.H. 55. There are two possible ways of accounting for this date: Either (a) the traditional date (53) for Ziyād's death is to be accepted, in which case the coins of later date are posthumous issues; or (b) the

¹ The coin recorded by Mordtmann (*Z.D.M.G.*, 1865, p. 465, no. 155), which is said to have borne the Pehlevi equivalent of this has certainly been misread (see Catalogue, p. 181). It is preposterous to imagine such a slur on Ziyād's paternity being permitted to appear on his coinage.

² See Caetani, Chron. Islamica, p. 593.

³ Z.D.M.G., 1879, p. 91; and, following him, Lammens in Rivista degli Studi Orientali, 1912, p. 683; and Miles, The Numismatic History of Rayy, p. 6.

⁴ The same applies to Thomas's coin (T. 6, p. 39). Lammens (op. cit.) suggested that Ziyād's death might even have taken place in A.H. 57. See also his article on Ziyād in the *Encycl. of Islam*.

traditional date is wrong and therefore the coins testify to Ziyād's survival until A.H. 55 at least. The dates on certain of the coins of Ziyād's son and successor 'Ubaidallāh would seem to corroborate the former view. But the question of the particular era involved in these dates has also to be considered.

A comparison between the coin dates of certain mints of Ziyād and his son 'Ubaidallāh will show how the evidence can be made to fit either of the two possibilities above mentioned:

Bi<u>sh</u>āpūr, years 50, 51, 52, 53, 54. Dārābjird, years 41, 43. 'Ubaidallāh
years 51, 52?, 56, 57, 58, 59,
60, 61, 62, 63, 64.
years 51, 53.
years 26, 41, 45, 46, 47, 48,
51, 52.

Take the case of Basra. If Ziyād lived until A.H. 55, then the coins of 'Ubaidallāh after that date (i.e. 56-64) would correspond, but unfortunately his coins dated 51 and 52 can only agree with this view if we equate them in terms of the Yezdigird era (i.e. = A.H. 63, 64). The same would apply in the case of Bishāpur. Ziyād's coins would extend from A.H. 50-54, while 'Ubaidallāh's, dated in terms of the Yezdigird era, would be from A.H. 63-65. The Dārābjird mint dates, however, are not so easy to reconcile. Ziyād was not appointed governor in Baṣra, with control of Dārābjird, until A.H. 45. In consequence, the era of Yezdigird alone can solve the difficulty. Ziyād's coins struck at Dārābjird must have been issued in A.H. 52-55. This would agree with the suggested date of his death in A.H. 55. But 'Ubaidallāh's coins from this mint complicate matters. His earliest dated coin (26) must be reckoned in terms of the Post-Yezdigird era (= A.H. 58). As for his Dārābjird date 41, this cannot be P.-Y.E. 41 = A.H. 73 since 'Ubaidallah was killed in A.H. 67. On the other hand, if we equate it with the Yezdigird era, Y.E. 41 = A.H. 52/53, it clashes with Ziyād's term of government. His other dates at this mint, however, 45-52, can easily be interpreted as A.H. 57-64. It is just possible that the Dārābjird 41 was an old reverse re-used. It is a common date on coins of several governors who struck coins there; besides Khusrau II and Mu'āwiya coins we have coins of Ziyād and his lieutenant Samura ibn Jundab and also of 'Abdallāh ibn 'Āmir and 'Ubaidallāh ibn Ziyād. Allowing, therefore, for the few instances of overlapping, the major portion of the coin evidence would point to the year A.H. 55 as the date of Ziyād's death.

Completely trusted by the Caliph Mu'āwiya in the control of these

vast and often turbulent dominions, Ziyād ruled sternly but loyally. His sons 'Ubaidallāh (q.v.) and Salm (q.v.) in particular carried on their father's policy of colonial settlement and expansion.

One of Ziyād's acts that has a bearing on our subject is his division of the great province of Khurāsān into four independent districts: Merv, Abrashahr (or Naisābūr), Merv al-Rūdh, and Herāt.¹ Of these the only one known from his coins as a mint is Abrashahr, though the whole four are mint-places of his son Salm. Ziyād's coinage of dirhams—which incidentally is mentioned by Maķrīzī²—is represented by the products of the following mints:

Besides Abrashahr, we have Bishāpūr, Baṣra, Dārābjird, Nihāvand, Nahr-Tīrā, al-Raiy, Iṣṭakhr, Zaranj, Hamadhān, and four uncertain mints that I have conjecturally located as Dasht-i Maisān, al-Shīrajān, Zanjān, and -Ķobādh?

(iii) Samura ibn Jundab (سمرة بن جندب)

Samura ibn Jundab al-Fazārī was one of the Saḥāba, or Companions of the Prophet. In the year A.H. 50, after Ziyād ibn Abī Sufyān was appointed governor of Kūfa in addition to Baṣra, Samura was made his deputy in the latter city. Samura, in pursuance of Ziyād's policy, launched a fierce attack on the Khārijites in his province in his capacity as head of the gendarmerie (shurṭa) and by his acts of cruelty and slaughter earned for himself an unenviable reputation. After the death of Ziyād, which is usually placed in A.H. 53,4 Samura continued in office for six (or according to another tradition, eighteen) months. Then he was dismissed by the Caliph Mu'āwiya. His words on learning of the Caliph's action are anticipatory of Cardinal Wolsey's: Had I obeyed God as I have obeyed him [i.e. Mu'āwiya] He would never have punished me. The date of his death, after a violent cold (الرّمهريز), is given as A.H. 58.6

Ibn al-Athīr 7 says that Samura ruled Baṣra for Mu'āwiya until the arrival of Ziyād's son 'Ubaidallāh from Khurāsān, but he rectifies this statement later on 8 by recording that, between the time of Samura's dismissal and the appointment of 'Ubaidallāh, Baṣra was under the control of 'Abdallāh ibn 'Āmir ibn Ghailān for six months.

See Ibn al-Athīr, al-Kāmil, ed. Tornberg, iii, p. 377.
 Ibn al-Athīr, iii, p. 383.
 But see above, p. xliv.

[.] لو اطعتُ الله كما اطعتُه ما عذبني أبدًا Ibn al-A<u>th</u>īr, ibid., p. 412 .

⁶ Ibn al-Athīr, ibid., pp. 412, 430. But Caetani, Chronographia, p. 641, quotes authorities for A.H. 59 or 60.

⁷ ii, p. 271.

⁸ iii, p. 414.

Samura's coinage is exceedingly rare. There is no specimen in any Museum Collection known to me. The only examples recorded belong to the mint of Dārābjird and are dated in the year 41. 'Ubaidallāh ibn Ziyād also struck coins at the same mint with the same date. Obviously the era employed in both cases must have been that of Yezdigird, which places them in the year A.H. 52/53. (But see p. xliv.)

(iv) 'Abdallāh ibn 'Āmir (عبد الله بن عامر)

'Abdallāh ibn 'Āmir ibn Kuraiz (born in A.H. 4) was appointed at an early age (A.H. 29), by his cousin the Caliph Othman, as governor of Baṣra. In the succeeding years he earned great fame on account of his conquests in Īrān. He is even said to have penetrated beyond Khurāsān into Transoxiana.¹ In the struggle for the Caliphate that ensued on the murder of Othman (A.H. 35) 'Abdallāh was involved. He naturally sided with 'Ā'iṣḥa, the Prophet's widow, in her attempt to avenge the death of the Caliph. When peace was restored in A.H. 41 by the appointment of Mu'āwiya as first Umaiyad Caliph, 'Abdallāh ibn 'Āmir was reinstated in his old governorship of Baṣra. But—strange as it may appear in those turbulent times—'Abdallāh was deposed in A.H. 44 because he was found to be too lenient. Thereafter until his death in 57² at Mecca he lived practically in retirement.

His coins, minted at Dārābjird and Bishāpūr in 41 and 44 respectively, must have been issued during the time when he was governor of Baṣra for the second time, with control over Fārs, Khurāsān, and Sīstān. Consequently, they must bear Hijra dates, although the coins of Ziyād dated 41 and minted also at Dārābjird can only fit in with the historical facts by being considered as dated according to the era of Yezdigird (see Ziyād). Even after his deposition in 44 we have his name appearing on coins of Ardashīr-Khurra for the year 47.³ There is a coin of an uncertain mint (perhaps Sīstān?) with his name, according to Mordtmann (see Catalogue, M. 29, p. 49), dated 44, which must, if true, be a Hijra date. As for his coins of Nahr-Tīrā (year 20) and of uncertain mint (BN?, year 30) the former is certainly not of the Hijra era, while the latter may be, though a Yezdigird reckoning is more probable

² See Caetani, Chronographia, pp. 629-30, for further references.

¹ See Barthold, Turkestan, pp. 6 and 185.

³ Cf. the coins of 'Abdallāh mentioned below struck at Nahr-Tīrā in 48 and at an uncertain mint (al-Shīrajān?) in the year 50. There is no record of 'Abdallāh ibn 'Āmir receiving an appointment after A.H. 44. It is just possible that another governor of the same name may have been responsible for these later coins. The only other governor of this name ('Abdallāh ibn 'Āmir ibn Ghailān) was in office in Baṣra for a few months in the year A.H. 54, but the dates on the coins do not support his claim to consideration.

(i.e. = A.H. 41). A certain number of coins besides, which have the name 'Abdallāh only on them, appear to have been struck during his periods of government. They are considered in the next section.

(v) 'Abdallāh (عد الله)

Coins with the name 'Abdallāh are known from the following mints:

Bishāpūr, years 42? and 44 (A.H.)

Dārābjird, year 41 (A.H.)

Nahr-Tīrā, years 20? (= A.H. 31?) and 48 (A.H.)

Nihāvand, year 41 (A.H.)

BJ?, year 20? (= A.H. 31?)

Kanja?, year 40? (A.H.)

al-<u>Sh</u>īrajān?, year 50 (а.н.)

Zaranj, year 41 (A.H.).

Most of these agree with known mints and dates of 'Abdallāh ibn ' \bar{A} mir, and it is most probable that all of these coins were struck under that governor (q.v.).

(vi) 'Ubaidallāh ibn Ziyād (عسد الله بن زياد)

'Ubaidallāh was the most outstanding of the sons of Ziyād ibn Abī Sufyān (q.v.). Appointed by the Caliph Mu'āwiya in A.H. 53 as governor of Khurāsān, he led his troops into Transoxiana and invaded the country as far as Bukhārā, where he defeated the soldiers of the Bukhār-Khudā (see p. lxxxi). After this successful campaign he was recalled to 'Irāķ (in 55) in order to fill the post of his late father as governor of Basra. There, one of his most pressing problems was the pacification of the Khārijite section of the community. This he managed to secure after stern measures had been adopted. When the Caliph Yazīd succeeded (in 60), he placed Kūfa as well as Baṣra under the administration of 'Ubaidallah. In the following year occurred the tragedy at Kerbela, when the Prophet's grandson Husain and his followers were massacred by the soldiers of 'Ubaidallah. For this act the partisans of the house of 'Alī have ever afterwards relentlessly cursed him. When the death of Yazīd occurred (in 64), and the everrecurring struggle for the Caliphate once again presented itself, 'Ubaidallah actually had homage paid to himself in Basra. But opposition on the part of his subjects drove him out of 'Irāķ into Syria, where, following the death of the short-lived Mu'āwiya II, he firmly supported the new Caliph Marwan, who gave him orders to recapture 'Irak. Under the latter's son 'Abd al-Malik, the fifth Umaiyad Caliph, 'Ubaidallah continued the struggle. In the year 67, near Mosul on the banks

of the River Zāb, however, he met his death in battle in consequence of treachery within the Syrian ranks. His head was taken triumphantly by the enemy to Kūfa and cast before the Shī'a adventurer Mukhtār on the place where some years before 'Ubaidallāh had similarly treated the head of 'Alī's son, Ḥusain. Thus was Kerbela avenged.

'Ubaidallah's coins are distributed over a considerable number of mints, as follows:

Abrashahr, year 60 (A.H.)

Airan (Sūsa?), years 29?, 30, 31, 32 (probably in terms of the Post-Yezdigird era, i.e. c. A.H. 61-64), 56?, 59, 60, and 61 (obviously A.H.)

Adharbaijān, years 62, 63 (A.H.)

Balkh, year 62 (A.H.)

Bihkobādh, years 60, 61 (A.H.)

 $Bish\bar{a}p\bar{u}r$, years 51 and 53. The former, if not the latter also, must be in the Yezdigird era, i.e. = a.H. 63 and 65

Başra, years 51, 52, 56-64, 67? The first two must = A.H. 63-64

BSH?, years 51? (or 59?), 58, 59, 60. The first date if 51 must be Y.E. = A.H. 62

Dārābjird, years 26 (P.-Y.E., i.e. = A.H. 58), 41, 45-48, 51, 52. All the latter are Y.E., i.e. = c. A.H. 52/3-64

Sīstān, years 56, 57?, 58? (A.H.)

Kirmān, years 56?, 59-62 (A.H.)

Nihāvand, years 57-60, 62?-63 (A.H.)

Uncertain, year 27? (P.-Y.E. = c. A.H. 59)

al-Raiy, years 38? (era?), 60-63 (A.H.), 68 (A.H.; posthumous)

Dasht-i-Maisan, years 56, 61?, 62-64 (A.H.)

Istakhr, years 52? (Y.E., i.e. = 64 A.H.), 60-62 (A.H.). Copper coin, year 59? (A.H.)

Zaranj, years 26 (P.-Y.E., i.e. = A.H. 58), 57 (A.H.)

Zanjān, years 60, 63 (A.H.)

Mintless, years 56, 57 (A.H.).

Although three eras can be distinguished on the coins of 'Ubaidallāh there is no case of the three being employed at the same mint. There are also coins with the name 'Ubaidallāh only on them. They almost certainly belong to this governor (see next section). 'Ubaidallāh also issued the remarkable coin (Catalogue, no. 75, p. 52) of a new type without mint or date.

There is a tradition quoted by Sauvaire ¹ that 'Ubaidallāh ibn Ziyād was the first to strike dirhams of inferior alloy (called $zuy\bar{u}f$) when he fled from Baṣra to Syria and lodged amongst the Arabs. There is

¹ Matériaux, p. 18. In the original 'Ubaidallāh is referred to as Ibn Murjāna, 'Son of Murjāna', the latter being his mother, who is mentioned in $Ibn\ al-Ath\bar{t}r$, iv, p. 219.

no trace of this fact, however, amongst the surviving dirhams of this governor.

(vii) 'Ubaidallāh (عسد الله)

The rare coins with the name 'Ubaidallāh only on them are from the mint of Herāt in Khurāsān. The years recorded are 52? and 56. The former is vouched for only by Markoff and on the face of it seems doubtful, considering that 'Ubaidallāh (ibn Ziyād) was not governor of this province until at least A.H. 53.

(viii) Salm ibn Ziyād أسلم بن زياد)

If his brother 'Ubaidallah was the most distinguished, and 'Abd al-Rahmān the most avaricious of the sons of Ziyād, Salm may be said to have been the most liberal (اجود بني زياد). <u>Kh</u>urāsān was governed in turn by the three sons of Zivād after his death, firstly 'Ubaidallāh (q.v.), then 'Abd al-Rahman (q.v.), and lastly Salm. Two other sons, 'Abbād and Yazīd, for a space governed Sīstān. Salm received his commission from the Caliph Yazīd (in 60/61), and in his zeal to pursue his father's and his brother's policy of territorial expansion he sought the help of such able generals as al-Muhallab ibn Abī Sufra (q.v.) and 'Abdallāh ibn Khāzim (q.v.). His campaign against the Turks met with some success. He even reached Samarkand, the chief town of Sughd. where his wife bore him a son. He was the first Arab governor of Khurāsān to pass the winter in Transoxiana. Any further conquests he might have made were prevented by the civil discord throughout the Islamic world aroused by the death of the Caliph Yazid (in 64). Like his brother 'Ubaidallah in Basra, Salm had homage paid to him provisionally by his subjects during the interregnum. But like his brother he was forced to take to flight, leaving behind him in his place al-Muhallab ibn Abī Sufra and a bitter inter-tribal warfare, which continued to trouble Khurāsān for some time. Salm himself died in 73.2

Salm's coins are of the following mints and dates:

Abra<u>sh</u>ahr, years 63 and 64 (A.H.) Arda<u>sh</u>īr-<u>Kh</u>urra, year 26 (P.-Y.E. = A.H. 58) Bal<u>kh</u>, year 67? (A.H.) Dārābjird, year 26 (P.-Y.E. = A.H. 58) Herāt, years 67 and 69 (A.H.)

¹ His name is variously rendered. Barthold (*Turkestan*), Gibb (*Arab Conquests*), and Wellhausen (*Arab Kingdom*) give Salan. Zambaur gives Salam; Mordtmann, Selem. Nützel's and Lavoix's Selim is quite impossible.

² Caetani, Chronographia, p. 873.

Sīstān, year 56 (Y.E. = A.H. 68) Merv, years 62–65, 66?, 67?, 68?, 69, and 70 (A.H.) Merv al-Rū<u>dh</u>, years 63, 64, 67?, and 70 (A.H.) Uncertain mints, years 63 and 64 (A.H.).

All these must have been struck during his governorship of the province of Khurāsān. One of the uncertain mints is apparently PALHAN (no. 46), which I have suggested was somewhere in the neighbourhood of Sīstān province, which was also under Salm's control although he had, of course, his lieutenant in charge there. Besides, we also have coins of Salm with a mint-signature (no. 52) which I have interpreted as Sīstān and dated 56. As he was not appointed to Sīstān until A.H. 60 or 61 this date must be in the Yezdigird era (= A.H. 68).

Salm's coins struck at Ardashīr-Khurra and Dārābjird, both in the province of Fārs, and dated 26, must be dated according to the Post-Yezdigird era, i.e. = A.H. 58. As his brother 'Ubaidallāh was governor of Baṣra and its dependencies including Fārs Province at that time—and, in fact, issued coins from Dārābjird with the same date—we must conclude that Salm must have deputized for his brother in that region, although there appears to be no statement to this effect in the annalists.

As a.H. 64 witnessed the proclamation of the rival Caliph 'Abdallāh ibn al-Zubair and the success of his supporter 'Abdallāh ibn Khāzim in ousting Salm from authority in Khurāsān, the coins after this date with his name must be regarded either as lingering efforts on the part of Salm's partisans to maintain his claim, or evidence that the mint officials were utilizing old dies. The anomalous position is seen if we collate the mints and dates of the two governors. In Abrashahr (Naisābūr), which was the seat of government for the province, the minthistory reads in conformance with events, but not so in the case of Merv.

Mint	Salm	'Abdallāh ibn <u>Kh</u> āzim
Abra <u>sh</u> ahr	63, 64	65, 67, 68, 69
Bal <u>kh</u>	67 ?	67, 68
Herāt	67, 69	['Abdallāh's son Muḥammad, 67]
Merv	62-65, 66?, 67?, 68?, 69, 70	63-67, 69, 70, 72, 73
Merv-al-Rū <u>dh</u>	63, 64, 67?, 70	69
<u>Kh</u> urāsān		63

The Arab-Ephthalite coins, which I have ascribed to 'Abdallāh ibn Khāzim, are not included in the above. They are Khurāsān 63, 68, and

69, and Merv 69. The latter has the additional interest of having on its reverse an Ephthalite legend similar to one on a coin of Salm of the same mint and of the previous year (no. 138, p. 81).

(ix) 'Abd al-Raḥmān ibn Ziyād (عبد الرحمن بن زياد)

The coins attributed to this governor bear a Pehlevi name-legend which might equally well be read as 'Abd al-Rahman ibn Zaid. But as there was no governor, or sub-governor, with this name, so far as we know, functioning in the Eastern Provinces at this time it is natural to suppose that the name is defectively spelt and that 'Abd al-Rahmān ibn Ziyād is actually intended.1 Although less distinguished than either of his other brothers 'Ubaidallāh (q.v.) and Salm (q.v.), 'Abd al-Raḥmān, nevertheless, like them was appointed to an important official position under the Umaiyads. We know that between A.H. 58/59 and 60/61 he was governor of Khurāsān with head-quarters at Abrashahr (Naisābūr). after which he was deposed and succeeded by his brother Salm. He was chiefly noted for his rapacity. No coins of his struck in the province of Khurāsān are so far known. The coins we do have with his name—if indeed the usual identification be correct—are from mints in the region of Khūzistān or Fārs, and of an earlier date as follows:

Arrajān	54	
ВЎ	52,	53
Birāmķobā <u>dh</u>	54	
Nahr-Tīrā	54	

If these dates are in the Hijra era, as is most probable, they seem to indicate that 'Abd al-Raḥmān was a sub-governor in those parts under his father Ziyād. However that may be, his mints and dates, as we shall see, are closely associated with those of another governor, namely, al-Ḥakam ibn Abi 'l-'Āṣ (q.v.).

(x) al-Ḥakam ibn Abi'l-'Āṣ (الحكم بن ابعي العاص)

The full name of this person was Abū 'Abdallāh al-Ḥakam ibn Abi 'l-'Āṣ ibn Umaiya al-<u>Th</u>akafī. During the Caliphate of Omar (а.н. 13-23) he appears in the annals along with his brother 'Uthman, the governor

¹ Mordtmann (S.K.B.A., 1871, p. 698) preferred to read 'Abd al-Raḥmān ibn Zaid and to identify him with the general of that name who took part in the campaign against North Africa during the Caliphate of Omar.

of 'Uman and Baḥrain, engaged in the conquest of Fars. Mordtmann,1 who, as Stickel had done,2 correctly identified him, states that he died in A.H. 35 and therefore, he argued, the coins in question, which are dated in the years 56 and 57, must be regarded as dated in the era of Khusrau II in order to make them = A.H. 24/25 and 25/26. He was apparently unaware that Ibn al-Athīr 3 records that in A.H. 45 al-Hakam was still alive and narrowly missed being appointed governor of Khurāsān by Ziyād ibn Abī Sufyān through a mistake on the part of the chamberlain who conveyed the commission to another al-Hakam. called ibn 'Amr al-Ghifārī. The latter died in A.H. 50. Although we hear nothing further concerning him in the annalists, the coins clearly show that he received a subsequent appointment as provincial governor.4 His mints also indicate that his control extended over much the same territory as did his predecessor's, 'Abd al-Raḥmān ibn Zivād (q.v.), i.e. the provinces of Fars and Khūzistān, and judging from his early associations with that region it is not surprising that this should be the case. His rule, apparently, was of short duration. The mints and dates of the two governors make an interesting comparison:

> Mints'Abd al-Rahmān HakamArrajān 54 56 52, 53 ВĴ Birāmkobādh 54 58 Nahr-Tīrā 54 56 Fil 56, 57?

(xi) 'Abdallāh ibn <u>Kh</u>āzim (عبد الله بن خازم)

Ibn <u>Kh</u>āzim, one of the Prophet's Companions, looms large in the early history of the Muḥammadan occupation of the province of <u>Kh</u>urāsān. In A.H. 32 he was in charge of the troops of 'Abdallāh ibn 'Amir (q.v.) at the capture of Herāt, and in the following year he received the governorship of the newly captured province of <u>Kh</u>urāsān. This post he held until the 'Alid party appointed their own partisans to govern the provinces. But following the establishment of the Umaiyad dynasty under Mu'āwiya (in A.H. 41) 'Abdallāh ibn <u>Kh</u>āzim was restored to <u>Kh</u>urāsān in that year. This important command he exercised during the years A.H. 41–44. Eventually, however, he aban-

 ¹ Z.D.M.G., 1879, p. 100.
 2 Handbuch, ii, p. 88.
 3 iii, p. 377
 4 A district in Başra was named after him and called Hakamān (Yākūt, ii. 302).

doned his allegiance to the Umaiyads and sided with the rival Caliph, 'Abdallāh ibn al-Zubair. Even the inducement later held out to him by the Caliph, 'Abd al-Malik ibn Marwān, of the revenues of Khurāsān for seven years in return for his allegiance to the Umaiyad cause failed to win him back. Success attended his venture and from A.H. 63/64, when he defeated the Umaiyad governor of Khurāsān, Salm ibn Ziyād (q.v.), until his death at the Battle of Merv in A.H. 72 he was in practically independent control of the province, with his central residence at Abrashahr (Naisābūr). The only coins of his that we so far know belong to this period. The latest coin is dated A.H. 73, which may be considered a posthumous issue. A comparison between his mints and dates and those of the titular Umaiyad governor, Salm ibn Ziyād, has already been made (see above, p. l) and provides valuable contemporary information regarding the political situation at the time.

During this period we also have the special group of coins with legends in Ephthalite script which I have attributed to this governor (see pp. 127-9). The mints and dates on these latter are:

<u>Kh</u>urāsān, years 63, 68, and 69 (A.H.) Merv, year 69 (A.H.).

Although we have no coins with 'Abdallāh's name struck at Herāt, we do have evidence that his son Muḥammad (q.v.), who was his deputy in that town, minted dirhams there in A.H. 67.

Only one coin that can be attributed to this governor is known (Catalogue, p. 95). It was minted at Herāt in the year A.H. 67. According to the annalists the city of Herāt was captured by the Zubairid governor, 'Abdallāh ibn <u>Kh</u>āzim (q.v.), about A.H. 64/65. After this subjugation the latter appointed his son Muḥammad as governor of the place. But some of 'Abdallāh's supporters from the tribe of Tamīm, who had become disaffected, forced their way into Herāt and killed Muḥammad. This event according to Ibn al-Athīr¹ occurred in the year A.H. 65. The coin-date seems to contradict this, although the actual Pehlevi date-legend is written defectively and may be a bungled form of 65.

¹ iv, p. 171.

In A.H. 63 Salm ibn Ziyād (q.v.) appointed as his representative in Sīstān Ṭalḥa ibn 'Abdallāh al-Khuzā'ī. This governor took the place of Yazīd ibn Ziyād, Salm's deposed brother. One of his feats was to overthrow the native ruler (or Zunbīl) of Kābul and ransom Salm's other brother Abū 'Ubaida for 500,000 dirhams. His rule over Sīstān, however, did not last long in the troublous period of revolt inaugurated by the insurrection of 'Abdallāh ibn Khāzim in the Eastern Provinces. Ṭalḥa is often named 'the Ṭalḥa of Ṭalḥas' (Ṭalḥa al-Ṭalaḥāt). He died in A.H. 81.¹

The coins, which have only recently been published 2 for the first time, are dated in the years A.H. 64 and 66 and bear a mint-signature (no. 52c) which I have interpreted as that of the mint of Sīstān.

In A.H. 66 the Zubairid governor of Baṣra, al-Ḥārith ibn 'Abdallāh ibn Abī Rabī'a, sent a new governor to the province of Sīstān; this was 'Abd al-'Azīz. The latter, like his Umaiyad predecessor Ṭalḥa ibn 'Abdallāh (q.v.), also waged war against the native prince of Kābul, in the course of which the latter perished. Again in A.H. 68 we hear of 'Abd al-'Azīz being temporarily driven from his capital at Zaranj during the civil disturbances in the province. He was able, however, to carry off the public treasury with him, a fact which no doubt aided his successful return to power. The coin evidence is in complete agreement with his governorship if we interpret his mint-signature (no. 52 d) as indicating Sīstān, as I have done both here and in the case of Ṭalḥa. The known coins belong to the year 66 (A.H.). Certain other coins which have been attributed to the same governor are discussed in the Notes (pp. 192 and 201).

There is a brief mention³ of this governor's appointment in the annals of the eventful days when the Umaiyad control in the East was seriously

Caetani, Chronographia, p. 975.
 Num. Chron., 1934, pp. 290 f.
 Tabari, Annales, ii, pp. 463-4; Wellhausen, Arab Kingdom, p. 409.

challenged in A.H. 64/65. After 'Ubaidallāh ibn Ziyād (q.v.) had been driven out of Baṣra, the citizens united and made 'Abd al-Malik ibn 'Abdallāh their Amīr. After a brief tenure of office he was superseded by 'Abdallāh ibn al-Ḥārith ibn Naufal (p. 200) who held the appointment for two or three months until the rival Caliph, 'Abdallāh ibn al-Zubair (q.v.), nominated his own representative to the post in the person of 'Umar ibn 'Ubaidallāh ibn Mi'mar (q.v.). The latter was succeeded in turn by al-Ḥārith ibn 'Abdallāh ibn Abī Rabī'a (65/66) and by Muṣ'ab ibn al-Zubair (66/67).

The sole mint of 'Abd al-Malik is Bishāpūr and the date is positively (A.H.) 66. This seems to indicate that after being governor of Baṣra he was later in charge of the province of Fārs. The same deduction can be made in the case of the coins of 'Umar ibn 'Ubaidallāh (see below).

(xvi) 'Umar ibn 'Ubaidallāh (ibn Mi'mar) (عمر بن عبيد الله بن معمر)

Under the rival Caliph, 'Abdallāh ibn al-Zubair (q.v.), 'Umar ibn 'Ubaidallāh was for a short time governor of Baṣra in A.H. 64/65. His successor was al-Ḥārith ibn 'Abdallāh ibn Abī Rabī'a. In A.H. 67 we find him as governor of the province of Fārs. In this capacity he was sent by the then governor of Baṣra, Muṣ'ab ibn al-Zubair (q.v.), on what proved to be a somewhat unsuccessful campaign against the Khārijites. His coins issued in the province of Fārs are all dated between the years A.H. 67–70, that is, until the civil war turned in favour of the Umaiyad party with the reconquest of 'Irāķ by the troops of 'Abd al-Malik ibn Marwān. 'Umar, like his superior, al-Muhallab ibn Abī Ṣufra, was apparently won over to the loyalist side, since in A.H. 73 we are told that he was dispatched by the Caliph 'Abd al-Malik to deal with the religious sectarians of Baḥrain.¹

'Umar's coins come from the following mints:

Arda<u>sh</u>īr-<u>Kh</u>urra, years 68, 69, 70 (A.H.) Bi<u>sh</u>āpūr, years 67, 68, 69, 70 (A.H.) Iṣṭa<u>kh</u>r, years 69, 70 (A.H.) Uncertain mint (no. 45 a), year 69 (A.H.).

The first three are all centres of administration in the province of Fārs. In all probability the uncertain mint was also in that province, or in the neighbouring province of Jibāl, as has been tentatively suggested (p. exxv).

Besides the above coins 'Umar also apparently minted dirhams at ¹ Caetani, op. cit., p. 860.

Başra and for Kirmān Province in the year 65. This coincides with his term of office as governor of Baṣra and its dependencies, of which Kirmān was one. Kirmān was also a mint of 'Umar's overlord, 'Abdallāh ibn al-Zubair, until A.H. 69, and of the latter's brother Muṣ'ab (q.v.) until A.H. 72, when we find it in the hands of the insurrectionist 'Aṭīya ibn al-Aswad (q.v.) for a few years. Thereafter the Umaiyad general al-Muhallab ibn Abī Ṣufra (q.v.) restored it as an Umaiyad mint (see p. cxxi).

(xvii) Mus'ab ibn al-Zubair (مصعب بن الزيس)

Brother of the famous rival Caliph 'Abdallāh ibn al-Zubair (q.v.), Muṣ'ab played a vigorous part in the unsuccessful effort made by the Zubairids to usurp the Caliphate. Any redeeming qualities he possessed as a warlike and magnanimous prince of the desert were obliterated by the terrible acts of vengeance he committed against his captured opponents. His brother appointed him governor of Baṣra in a.h. 66, but in the following year deposed him in favour of his own son Ḥamza. Muṣ'ab's activities were transferred to Kūfa, where along with al-Muhallab ibn Abī Ṣufra he successfully attacked the Shī'a usurper al-Mukhtār and reclaimed the 'Irāķian provinces for his party. In a.h. 68 he was in charge of Baṣra for a second time. But until his death in battle in a.h. 71 or 72¹ against the forces of the Umaiyad Caliph 'Abd al-Malik ibn Marwān, he must have been too busily engaged in warfare to occupy the city in person.

Muș'ab's mints are as follows:

Başra, year 66? Kirmān, years 69, 70?, 71, 72? Nihāvand, year 69 Dasht-i-Maisān, year 67.

Apparently no coins were minted in his name at Baṣra during his second term as governor. His absence on military campaigns no doubt may account for this. [See, however, M. 48, p. 103.]

Mus'ab's name is associated in the historians with monetary reforms. He is also stated to have introduced gold coins.² There is no numismatic evidence for either of these statements.

¹ Wellhausen, The Arab Kingdom and its Fall, Engl. tr. by Mrs. T. H. Weir, p. 198, and Lammens in the Encycl. of Islam, article Muṣ'ab ibn al-Zubair, prefer the latter date, though Caetani, op. cit., p. 845, has an imposing array of authorities in support of the earlier date. Muṣ'ab's coin, said to be dated 72 (see T. 17, p. 104), is in favour of Wellhausen's opinion.

² See Sauvaire, Matériaux, pp. 11, 12, 23, and 24.

(xviii) Mukātil ibn Misma' (مقاتل بن مسمع)

Tabarī¹ mentions the interesting fact that in A.H. 72 there were two sons of Misma' appointed as provincial governors in 'Irāķ by Khālid ibn 'Abdallāh (q.v.), the new Umaiyad governor of Baṣra. They were 'Āmir who was over Bishāpūr, and Muṣātil who was over Ardashīr-Khurra, while a grandson, Misma' ibn Mālik ibn Misma', was over Dārābjird and Fasā, all centres of administration in the province of Fārs. Of these three governors, coins of Muṣātil only are known. As they bear the mint-signature of Bishāpūr (years 71 and 72) it would appear that Ṭabarī has transposed the governorship of the two brothers.

After his appointment Mukātil was placed in charge of the army to act in conjunction with 'Abd al-'Azīz, Khālid's brother, on an expedition against the Azāriķa. Ķaṭarī ibn al-Fujā'a (q.v.) sent a body of 900 horsemen to meet the attack. The Umaiyad forces were routed and among the slain was Mukātil.²

On Muṣātil's coins, p. 105, there is an unusual Kufic marginal legend on the obverse. Prof. Tritton has suggested to me that it may have some bearing on the governor's tribal connexions. He was a Bakrite (﴿كَرَى).

Son of the famous Umaiyad general, al-Muhallab ibn Abī Ṣufra (q.v.), al-Mughīra was governor of Iṣṭakhr in A.H. 71.3 The only coin of his so far known was struck in this year, but unfortunately the mint-signature (no. 64) is uncertain. He died in A.H. 82 much to the grief of his father whose favourite son he had been.

(xx) Umaiya ibn 'Abdallāh (امّة بن عبد الله)

In order to restore order amongst the Arab tribes, who were engaged in bitter feudal disputes in the province of Khurāsān, the Caliph 'Abd al-Malik ibn Marwān sent his kinsman Umaiya ibn 'Abdallāh, a member of the Prophet's own tribe of Ķuraish, to act as governor of that important domain in A.H. 74.4 Umaiya appointed his son 'Abdallāh to

¹ ii, p. 822. ² Ibn al-A<u>th</u>īr, iv, p. 279.

³ Caetani, op. cit., p. 841. He is referred to in a poem dealing with the defeat of the Khārijites, a line of which is quoted in Yākūt, op. cit., ii. 560; Barbier de Meynard, Dictionnaire géographique, p. 227.

⁴ Caetani, op. cit., p. 877. The alternative date A.H. 72 is not substantiated by the coin evidence of the Khurāsānian mints.

govern Sīstān, and lead what proved to be a futile campaign against the Turks ($Atr\bar{a}k$). A generous and benign man, Umaiya had no military ability and his own unsuccessful expedition across the Oxus in A.H. 77 led to his recall in the following year. Thereupon al-Ḥajjāj ibn Yūsuf (q.v.), who succeeded him, appointed al-Muhallab ibn Abī Ṣufra (q.v.) over \underline{Kh} urāsān and 'Ubaidallāh ibn Abī Bakra (q.v.) over Sīstān.

Umaiya's mints and coin-dates are as follows:

Balkh, year 77 (A.H.)

<u>Kh</u>urāsān?, year 64 (Y.E.) = A.H. 76

"year 74 (A.H.)

Merv al-Rū<u>dh</u>, year 64 (Y.E.) = A.H. 76

Sīstān, year 73 (A.H.).

The most feasible explanation of the dating in the case of the <u>Kh</u>urāsān coins is that the Yezdigird era was still in use alongside of the Muḥammadan reckoning. Umaiya's coin of Sīstān, which is dated one year previous to his appointment over <u>Kh</u>urāsān,² may mean that he was in charge of the former province on behalf of his brother <u>Kh</u>ālid ibn 'Abdallāh (q.v.), then governor of Baṣra. We do know, as mentioned above, that Umaiya on his appointment to <u>Kh</u>urāsān placed his son in charge of Sīstān, so it is possible that he had just vacated the latter post.

(xxi) Khālid ibn 'Abdallāh (خالد بن عبد الله)

Khālid ibn 'Abdallāh ibn Khālid ibn Asīd came into prominence first of all during the Zubairid usurpation of the Caliphate. In A.H. 70 during the absence of Muṣ'ab ibn al-Zubair (q.v.) from Baṣra, Khālid started a rebellion in favour of the Caliph 'Abd al-Malik, but was forced to retire to Syria. With the triumph of the Umaiyads in the following year, however, he obtained the governorship of Baṣra, after that important command had been the subject of dispute between two other governors, Ḥumrān ibn Abān (q.v.) and his rival 'Ubaidallāh ibn Abī Bakra (q.v.). In A.H. 73 Khālid was deposed in favour of the Caliph's brother Biṣhr ibn Marwān (q.v.), who had control of both Kūfa and Baṣra. After the latter's death in A.H. 74 Khālid was again nominated to Baṣra, but after two months the Caliph appointed the victorious general al-Ḥajjāj ibn Yūsuf (q.v.) over all 'Irāķ.' Apparently Khālid resented this and in the year A.H. 75 Ḥajjāj's representative was forced to expel him from Baṣra. There is a unique coin of this date struck at

¹ The satirists of the period declared that he was well named 'the little handmaiden' (Umaiya).

² See foot-note 4, above, p. lvii.

³ Anon. Chron., ed. Ahlwardt, p. 266.

Baṣra, which may be considered a relic of <u>Kh</u>ālid's occupation of that city. His only other mint is Bi<u>sh</u>āpūr (years 71 and 74). The latter date also belongs to <u>Kh</u>ālid's second period of power in the 'Irāķian province.

When the Umaiyad cause attained success over the Zubairids in A.H. 71 the Caliph 'Abd al-Malik made his young brother Bishr governor of Kūfa. It is interesting to note, in passing, that there accompanied him to 'Irāķ as tax-collector Mūsā ibn Nuṣair, afterwards famous for his exploits in North Africa and Spain, whose name figures on the Arab-Byzantine coins of that region. In A.H. 73 when Khālid ibn 'Abdallāh (q.v.) was deposed from Başra, the position was allotted to Bishr in addition to that of Kūfa. In the latter city he left 'Amr ibn Ḥuraith as his deputy and made his official residence in Başra. One of his first official duties was, on the receipt of a dispatch from the Caliph, to send troops from these two garrison cities to assist al-Muhallab ibn Abī Sufra (q.v.), who was still engaged in the suppression of the rebellious Khārijites. Being jealous of the distinguished general—possibly because the latter's commission to exterminate the heretics proceeded from the Caliph direct and not from himself as governor of these parts—Bishr only partially obeyed orders, and placed the issue of the campaign in jeopardy. His sudden death, however, in A.H. 74 prevented any further damage to the Umaiyad party.

His coins are extremely rare, the sole mint and date so far recorded being al-Raiy, A.H. 74.2

After the downfall of the Zubairid cause in Baṣra in A.H. 71/72 we hear of 'Ubaidallāh ibn Abī Bakra disputing the governorship of that city with Ḥumrān ibn Abān (q.v.). The Caliph settled the matter by investing Khālid ibn 'Abdallāh (q.v.) with the dignity, while 'Ubaidallāh, his friend, was made his deputy (khalīfa). When Khālid was deposed, no doubt 'Ubaidallāh also fell from grace. At all events he does not come into prominence again until A.H. 78. In that year Khālid's brother Umaiya ibn 'Abdallāh (q.v.) was deposed from his governorship of Khurāsān and Sīstān and the great viceroy Ḥajjāj (q.v.) took over.

¹ These will be dealt with in a subsequent volume of this Catalogue.

² I have recently been informed by Bay Osman Ardağ of Istanbul that a new coin of Bishr ibn Marwān has been acquired by the Museum there on which the mint is Başra and date 75. I await its publication with interest.

The latter sent 'Ubaidallāh to govern Sīstān. There his military expedition in that region against the ruler of Kābul, which turned out so disastrously, has a special chapter allotted to it in the historians. His death is recorded in the following year A.H. 79, which is the date on his unique coin (Th. 14, p. 110). He was succeeded by 'Abd al-Raḥmān ibn Muḥammad ibn al-Ash'ath (q.v.). The mint-signature on 'Ubaidallāh's coin is no. 52 c which I have interpreted as that of Sīstān.

(xxiv) Humrān ibn Abān (حمران بن ابان)

In the year A.H. 71/72 Baṣra was the scene of a great dispute between Ḥumrān¹ and 'Ubaidallāh ibn Abī Bakra (q.v.) for the governorship of the city. The Caliph settled the matter by appointing Khālid ibn 'Abdallāh (q.v.). Ḥumrān was transferred to Mecca. He died in A.H. 75. His rare coins are all struck at Ardashīr-Khurra in the year 72.

(xxv) 'Aṭīya ibn al-Aswad (عطّية بن الأسود)

We first hear of 'Atīya ibn al-Aswad al-Hanafī about A.H. 69 when he was sent to 'Umān by Najda ibn 'Āmir, the leader of the Khārijites in Yemāma. The place was then in the possession of a chief called 'Abbād ibn 'Abdallāh, whose two sons, Sa'īd and Sulaimān, were exacting tribute from passing ships and from the neighbouring lands. When 'Atīya arrived there was a fight in which 'Abbād was killed, and 'Aṭīya became ruler of that region. After some months he went off, leaving behind as his representative a man named Abu'l-Kāsim. The people of 'Umān, headed by Sa'īd and Sulaimān, rose against the latter and slew him. 'Atīya was thereupon forced to return, but failed to regain control of the place. In the meantime a difference of opinion between him and Najda² led to his severing all connexion with the Khārijite party in Arabia, and taking ship he sailed for Īrān, finally reaching Kirmān. There as a usurping governor, we are told 'he minted dirhams which he named the 'Aṭawīya (dirhams).3 'Aṭīya's dirhams are all struck for Kirman and are dated 72, 73 (or 76), 74, and 75 (A.H.).

In A.D. 74/75 when the great Umaiyad offensive was directed against the Khārijites by al-Muhallab ibn Abī Şufra (q.v.) 'Aṭīya was defeated

 2 This was before a.H. 72 when Najda was killed by Abū Fudaik, who took possession of Bahrain ($Tabar\bar{\imath}$, ii, p. 829).

¹ Weil, Geschichte der Chalifen, i, pp. 269, 411, gives the pronunciation Ḥamrān, but the Pehlevi legend on the coins shows clearly that the correct form is Ḥumrān.

[.] وضرب بها دراهم سمّاها العطويّة : Ibn al-A<u>th</u>īr, iv, p. 167

and forced to flee first of all to Sīstān and then to Sind. Finally at Ķandābīl, the modern Gandāw in Baluchistan, he was killed.¹

(القطري بن الفجائة) (xxvi) al-Ķaṭarī (ibn al Fujā'a)

Katari, the rebel leader of the Azrakites, who caused so much unrest in the Iranian provinces during the Umaiyad Caliphate, gained renown by his spirited revolt between the years A.H. 69-79. He assumed the title of 'Commander of the Faithful', which appears on his coins in its Pehlevi form, as well as his other designation 'Abdallāh, 'Servant of Allah'. At the head of his wild fanatical followers this soi-disant Caliph swept from the fastnesses of Kirman across into the rich territory of Trāk, and even menaced the seat of government at Basra. The greatest obstacle to his success, however, was the Umaiyad general, al-Muhallab ibn Abī Sufra (q.v.), who at the bidding of al-Hajjāj ibn Yūsuf routed him. Kaṭarī was forced to seek asylum in Tabaristān. While there, he is said to have been killed by the Ispahbad or native prince of that land in a duel.2 According to another version he fell in battle against Sufvān ibn al-Abrad. His head was sent to the Caliph at Damascus. He is said to have perished about A.H. 79. Besides his warlike qualities he was credited with a certain talent as a poet.

Apart from a unique dirham minted at Zaranj, capital of Sīstān Province, all his coins were struck at mints in the province of Fārs. Most of them are also dated (A.H.) 75, a year when he was in the heyday of his supremacy. The numismatic data can be summarized as follows:

Arda<u>sh</u>īr-<u>Kh</u>urra, year 75 (A.H.) Bi<u>sh</u>āpūr, years 69 and 75 (A.H.) Dārābjird, year 75 (A.H.) Zaranj, year 75 (A.H.).

(xxvii) Al-Muhallab ibn Abī Ṣufra (المهلّب بن ابي صفرة)

Although al-Muhallab was one of the outstanding generals of the cause of the Umaiyads, and one whose campaigns materially established their supremacy, he was for a time allied with the anti-Caliph 'Abdallāh ibn al-Zubair (q.v.). In those days he waged war against the Shī'a rebel al-Mukhtār as well as against the Khārijite agitators in the provinces, and at the same time kept the Syrian supporters of the Umaiyad

¹ Ibn al-Athīr, iv. 169; Anon. Chron., p. 143. The dirhams of 'Atīya were first identified by the writer in Num. Chron., 1934, pp. 294-9.

² Ibn Isfandiyār, Ta'rīkh-i-Ṭabaristān, tr. E. G. Browne, p. 104.

Caliph at bay at Mosul. When his superior Muṣʿab ibn al-Zubair (q.v.) was killed in A.H. 72, Muhallab had already withdrawn from the Zubairids and had sworn allegiance to the Umaiyad Caliph 'Abd al-Malik ibn Marwān.

Under Umaiyad rule he continued his struggle against the various parties of religious sectarians, who still maintained their hold on many of the provinces. The Khārijite rebel 'Aṭīya ibn al-Aswad (q.v.) was driven out of Kirmān c. a.h. 75/76. Muhallab next directed his attention to the suppression of the Azraķite claimant to the Caliphate, Ķaṭarī ibn al-Fujā'a (q.v.). As a reward for these successful punitive expeditions he received the governorship of Khurāsān in a.h. 78 under Ḥajjāj ibn Yūsuf (q.v.). On his way back from an expedition against Bukhārā he died in a.h. 82. Grief at the death of his son al-Mughīra (q.v.) is said to have contributed to his sudden end. Another son, Yazīd, succeeded him as governor of Khurāsān.

Muhallab's coins have an interesting connexion with those of his adversaries Kaṭarī and 'Aṭīya, whom he dispossessed, as can be readily seen from the following comparison of their respective mint activities:

Province	Mints	Kaṭarī 'Aṭīya	Muhallab
Fārs	Arda <u>sh</u> īr- <u>Kh</u> urra	75	76
,,	Bi <u>sh</u> āpūr	69, 75 —	75, 76
,,	Dārābjird	75	76
,,	Işţa <u>kh</u> r	크레이 후 를 다른 시트 리아 교육	78, 79
?	Uncertain	대한 기를 하고 다양 을 다르고 있는	76
Sīstān	Zaranj	75	75, 76
Kirmān	Kirmān	— 72–75 (or 76)	76, 77, 78

Although we have so far no coins of Kaṭarī struck at Iṣṭakhr it is not at all unlikely that this was also one of his mints, since Muhallab issued dirhams from it.¹ At all events the other mints in the same province of Fārs, namely Ardashīr-Khurra, Bishāpūr, and Dārābjird, passed out of the hands of Kaṭarī into Muhallab's control in the year A.H. 75/76. The coin of Muhallab in the Kaiser-Friedrich Museum (B. 37, p. 115), which was struck at Iṣṭakhr and has been conjecturally dated 69 by Nützel, is almost certainly to be dated 79, since Muhallab was not minting as early as 69 in the province of Fārs, and we know that in 69 his ally, a Zubairid governor, 'Umar ibn 'Ubaidallāh (q.v.), was actually in a position to issue coins at that mint and did so.

¹ See Mint Notes, p. cxxx, for its previous record as a mint under the Umaiyads and Zubairids in turn.

Moreover, the year 79 fits in with other known coins of Muhallab from the same source. As for the uncertain mint TART (no. 54), as I have pointed out in the Mint Notes (p. cxxx), it is almost certainly a variety of the mint-signature of Ardashīr-Khurra.

In the case of 'Aṭīya, whose mint issues were apparently confined to the province of Kirmān, the transition from his domination to that of Muhallab is just as clearly demonstrated by the coin data as in the case of Ķaṭarī in Fārs and Sīstān (capital Zaranj).

Incidentally there are no Arab-Sassanian coins so far known struck by Muhallab for any of the provincial mints of <u>Kh</u>urāsān, to which he was appointed in A.H. 78. This is not altogether surprising, since the new Reformed Currency was already in use in that outpost of the Caliphate. The last governor in fact whose name appears on Umaiyad coins of <u>Kh</u>urāsān is Muhallab's immediate predecessor, Umaiya ibn 'Abdallāh (q.v.).

After Hajjāj's governor in Sīstān Province, 'Ubaidallāh ibn Abī Bakra (q.v.), had ignominiously failed in his expedition against the native ruler of Kābul, a more energetic general was required. 'Abd al-Raḥmān ibn Muhammad was therefore appointed in A.H. 80 as governor of Sīstān. He is usually referred to as Ibn al-Ash'ath after his grandfather. Ibn al-Ash'ath was supported by a new contingent of troops recruited largely from natives of Kūfa and Başra. This formidable host was nicknamed 'the Army of the Peacocks'.1 Although Ibn al-Ash'ath began making steady progress in his campaign of subjugation, Hajjāj, with his characteristic impatience, urged him to accelerate his advance. Friction between the two ensued, and Ibn al-Ash'ath, supported by his 'Irākian levies, who naturally wished for a speedy return to their homeland and moreover detested Hajjāj, turned in revolt. Consolidating his rear by establishing his deputies in the key-cities of Sīstān, and making a pact with his old enemy Zunbīl, lord of Kābul, Ibn al-Ash'ath marched through the province of Fars, heading for 'Irāk. There his followers, elated at their successes, renounced the Umaiyad Caliph 'Abd al-Malik and paid homage to Ibn al-Ash'ath. Ḥajjāj, who endeavoured with his Syrian soldiers to stem the tide, was

thrust back. Baṣra itself, and later Kūfa, fell into the hands of the conqueror for a time. But soon, in A.H. 82, after a stubborn resistance, the fortune of war forsook Ibn al-Ash'ath and he was forced to retreat to Sīstān. After many vicissitudes, Ḥajjāj managed to bribe the lord of Kābul to get rid of him in A.H. 84 or 85.

Ibn al-Ash'ath's coins are exceedingly rare. Only two mints of his are so far known to me, both in the captured province of Fārs, namely, Bishāpūr (year 82) and Dārābjird (year 70). The latter date can only be satisfactorily explained by interpreting it in terms of the Yezdigird era, i.e. A.H. 81/82. The history of the mint of Dārābjird has numerous instances of the continued employment of this era.

(الحجاج بن يوسف) (xxix) al-Ḥajjāj ibn Yūsuf)

There is no more prominent personality in the annals of the Umaiyad Caliphate than that of Ḥajjāj. After he had completely stamped out the revolt of 'Abdallah ibn al-Zubair (q.v.) in Arabia, his career as the strong man of the Umaiyad party rapidly progressed. In A.H. 75 the Caliph 'Abd al-Malik appointed him governor of both Kūfa and Baṣra. When the tidings reached the great Umaiyad general al-Muhallab ibn Abī Sufra (q.v.) he is said to have acclaimed it with the words: 'A real he-man is now governor'. As viceroy of the Eastern Command Ḥajjāj had to employ stern measures to cope with the numerous dissenting forces and refractory parties that threatened at all times to disrupt the Caliphate. Perhaps the most formidable set-back he received was when his quondam lieutenant, 'Abd al-Rahman ibn Muhammad ibn al-Ash'ath (q.v.), almost overthrew him. But Hajjāj only emerged in the end stronger than ever. When he died in A.H. 95 of cancer he was only 52. His accomplishments had been historic. Not only did he consolidate the Umaiyad power, but his statesmanship left a deep impress on his age. One of the many reforms of which he was instigator was the use of Arabic in the 'Irāķian State Chancellory in place of Pehlevi,2 an innovation which is exemplified in his Arab-Sassanian coins (cf. Catalogue, Th. 16 and no. 229). But his chief numismatic interest lies in his close association with the reform of the monetary system under the Caliph 'Abd al Malik c. A.H. 75. The part he played in this is recounted elsewhere (below, p. exlvii f.).

[.] لقد أَتَى القومَ والِ ذَكَرٌ : Anon. Chron., p. 277

[.] اول من نقل ديوان العراق من الفارسية الى العربية : Kalka<u>sh</u>andī, Ṣubḥ al-Aʿ<u>sh</u>ā, i, p. 423

It is surprising that Baṣra is not represented amongst the few mints of Ḥajjāj, which are as follows:

Arda<u>sh</u>īr-<u>Kh</u>urra, years 77?, 78, and 79? (A.H.) Bi<u>sh</u>āpūr, years 76, 77, 78, 79, 80?, 81, and 83 (A.H.) Uncertain mint (no. 54), years 78 and 80 (A.H.).

With Ḥajjāj the Arab-Sassanian coins of the Umaiyad governors come to an end.²

II. The Arab-Ephthalite Coins

This small group of coins is really a sub-division of the preceding one. But their rather special character and their enigmatic nature mark them out for separate treatment. I have applied the term Arab-Ephthalite to these coins as a convenient label. Besides having legends in Arabic and Pehlevi these remarkable pieces also contain legends in a script of a type which is similar to that on the coins issued by the White Huns or Ephthalites. This Ephthalite script has not so far been satisfactorily deciphered, though several attempts have been made by orientalists. Among the most recent monographs bearing on the subject the following may be consulted:

- (a) Ernst Herzfeld, Kushano-Sasanian Coins, Calcutta, 1930, which demonstrates the evolution (or rather devolution) from ancient Greek of certain cognate forms of script.
- (b) Édouard Specht, 'Du Déchiffrement des monnaies Sindo-Ephthalites' (in Journal Asiatique, 1901, pp. 487-523), whose conclusions can be ignored.³
- (c) Jacques de Morgan, Manuel de Numismatique orientale, vol. i, pp. 447-8 (edited by K. J. Basmadjian), Paris, 1936, follows Specht in his attempted decipherment of the alphabet, but casts no light on the subject.
- (d) Heinrich F. J. Junker, Die Hephthalitischen Münzinschriften (Sonderausgabe aus den Sitzungsberichten der Preussischen Akademie der Wissenschaften, Phil.-Hist. Klasse, 1930, xxvii), proposes new interpretations which are very debatable. Apparently, though he does not call it such, the only specimen of an Arab-Ephthalite coin known to him was the one published by Vincent A. Smith (Catalogue of the Indian Museum, i, 1906, p. 230) and quite wrongly attributed by the latter to Umaiya ibn 'Abdallāh. Junker discusses this particular coin on pp.

¹ This is almost certainly a variant signature of the mint of Ardashīr-Khurra.

² For the uncertain governors (pp. 121 ff.) reference may be made to the corresponding Notes at the end of the Catalogue, pp. 200 f.

³ This is also the opinion of Herzfeld in a recent publication (*Arch. Mitt.*, 1938, p. 153, f.n. 1).

17–18 of his article. The Ephthalite legend in the field on the obverse he reads as ZOAOOO (i.e. reading from l. to r.). Alternatively, he adds that the penultimate letter may be a P, hence ZOAOPO or ZOYOPO. He says that the letter read as Z is not clear (he had not, of course, seen the perfectly clear examples of the British Museum) and might be merely a Querstrich, in which case the legend might be read (from r. to l.) as OPOhO. The second line he reads (from l. to r.) as $T\omega ZOIONO$ or $T\omega ZOIONO$ (or $T\omega ZIIONO$). i.e. $T\tilde{a}\tilde{z}a\gamma\tilde{a}nu=T\tilde{a}\tilde{z}i\gamma\tilde{a}n$. He next considers the marginal legends. The symbol $\tilde{\omega}$ he does not endeavour to explain. He correctly notes the Arabic basmala in the second quarter, and detects Vincent Smith's misreading of the Pehlevi legend in the third quarter.

He next considers Vincent Smith's interpretation of the reverse. The Pehlevi legend left of the fire-altar and attendants he accepts as ARBA, i.e. four; the legend on the right, which Smith read as Khurāsān, he emphatically, and in my opinion correctly, dismisses, although he does not suggest any possible alternative reading. An acquaintance with Arab-Sassanian coins, however, would have revealed to him the clue. It is none other than the Pehlevi date HSHTSHST, i.e. 68, somewhat truncated at the end. If this is so, it is natural to suppose that the other word on the left should be a Pehlevi mint-signature.1 This, or a similar mint-signature, is found on the Arab-Sassanian dirhams of the two governors 'Abdallāh ibn Khāzim and Umaiya ibn 'Abdallāh, who, we know, minted in Khurāsān. A comparison with the Pehlevi mint-name (no. 26) HURASAN, i.e. Khurāsān, indicates how closely the problematic word resembles the beginnings of the name of that province. It is not at all fanciful to interpret it as such, i.e. HURA. We may conclude that this particular Arab-Ephthalite coin was issued in Khurāsān in the year A.H. 68.2 The exceptional coin (Catalogue, no. 254, p. 129) struck at Merv in the year A.H. 69 amply confirms this interpretation.

What follows? From our knowledge of the Arab-Sassanian coins we know that about the years A.H. 68 and 69 there were two governors minting in the five great mints of the <u>Kh</u>urāsān Province (viz. Abra-shahr, Balkh, Herāt, Merv, and Merv al-Rūdh) and they were (a) 'Abdallāh ibn <u>Kh</u>āzim, who challenged Umaiyad authority, and (b) Salm

¹ That the usual positions of date and mint legends should be transposed is very uncommon but not unknown (e.g. Th. 18, p. 124).

² De Morgan, op. cit., p. 455, in considering a similar specimen in the Collection of Colonel Allotte de la Fuÿe, correctly notes that the legend on the right of the reverse is a date, which he reads as 80 or 68, and that the legend on the left is a mint, which he very hesitantly expounds as Suba (?). His view that these coins were associated with Sind leads him, however, to the absurd conclusion that they were posterior to the year A.H. 93, and that the puzzling name-legend might be that of Hajjāj ibn Yūsuf.

ibn Ziyād, who supported it. It is quite natural to imagine, therefore, that the name of one or other of these two governors should figure on the obverse after the traditional manner. If we take the Ephthalite legend on coins nos. 246-54 it seems to me that the name of the former has the better chance of being elucidated from the tangle. I suggest the following for the first line:

The only letters that seem to be probable are the following, which are collated with some equivalents which I have selected from Herzfeld's alphabetic list (op. cit., Table III) and Junker (op. cit., p. 24).

Greek	Herzfeld	Junker	$Arab ext{-}Ephthalite \ coins$	Value
a	0	. • • • • • • • • • • • • • • • • • • •	0	A
β	B	8	G	В
δ	A	٩	4	D
λ	*	.	,	L
ζ	2	2		\mathbf{z}

The last letter (z?) of this first line, I can only suggest, is a postposition having some significance in the Ephthalite language. At any rate it is of interest to observe that this first line is found, together with a symbol similar to the one mentioned above, embodied in certain countermarks (nos. 28, 34, and 40) on the regular Arab-Sassanian dirhams. These have been noted on coins of Salm ibn Ziyād and on one of the Arab-Ephthalite coins ascribed to 'Abdallāh ibn Khāzim (see Countermarks, p. cxliv). It is noteworthy that where these particular countermarks occur they are always on coins that must have circulated in Khurāsān and neighbourhood and never before or after the time of 'Abdallāh ibn Khāzim. Moreover, the present group of Arab-Ephthalite coins begin in the year A.H. 63, which was the year of 'Abdallāh ibn Khāzim's first recorded minting in Khurāsān of coins of Arab-Sassanian type.

It seems to follow that the first-line legend, therefore, must be complete in itself and cannot be interpreted, as I was at first inclined to do, on the analogy of the Pehlevi name-legends on the coins of the preceding series, as 'Abdallāh son of ——, leaving the second line to contain the patronymic. The last line, in this case, is probably a title. But whatever it is, it is interesting to observe that it is the same—apart from a slight difference in epigraphy—as the marginal legend on a coin of Sassanian type with the name of Khusrau II of uncertain mint and date which Thomas read as Arabic (see Catalogue T. 2, p. 14).

To return to the reverse legends. Besides those we have already considered above there remain the marginal legends, partly in Pehlevi and partly in Ephthalite. Junker correctly reads the Pehlevi legend in the second quarter, but wrongly interprets the Pehlevi gdh in the third quarter as ΣPI . Although he makes an effort to transliterate the puzzling Ephthalite legends in the first and fourth quarters he has to admit defeat, and the present writer must confess himself similarly baffled.

The same difficulty attaches to the unique Arab-Ephthalite coin in the American Numismatic Collection, New York, described on p. 127. I hazard the guess that it may be an issue of the Arab governor Rabī' ibn Ziyād for the following reasons:

- (a) the date in Pehlevi is NVSH, i.e. 39, which is probably to be regarded as a date in terms of the Yezdigird era, i.e. = A.H. 50/51.
- (b) Rabī' was active about this time in \underline{Kh} urāsān, the region where the other Arab-Ephthalite coins were almost certainly struck. In fact the city of Bal \underline{kh} in this year capitulated to him.
- (c) Professor Gibb, whose monograph The Arab Conquests in Central Asia throws considerable light on the history of Khurāsān as well as of the Transoxine regions at this period, has the following epitome of events (p. 16): 'Rabī' b. Ziyād al-Hārithī, the first conqueror of Sijistān, after reducing Balkh, pursued the Ephthalite army into Quhistān and dispersed it with great slaughter.'

Unfortunately the Ephthalite legends both on the obverse and reverse have so far refused to give up their secret. The only suggestion I can make is that the second line of the name-legend does appear to contain a short name like ZIAD, which would fit the above hypothesis, though this involves reading the legend from left to right, contrary to the way proposed on the coins ascribed to 'Abdallāh. It might either be the name of Ziyād, the father of Rabī', or else of Ziyād ibn Abī Ṣufyān, who was then governor of Baṣra and its dependencies. Rabī', as Ṭabarī says, was Ziyād's governor for Khurāsān.²

The Arabs called the rather mixed race of Ephthalites by the name of Haital, هيطل (plural, $Hay\bar{a}tila$, هيطل), a name which like the Greek Εφθαλῖται appears in the early Chinese records as Yen-tai-i-li-to, or in short, Yi-Ta. According to Professor Minns 3 the older name was Hua (in Sanskrit $H\bar{u}na$) which seems to be paralleled by the Chuni, Phuni,

¹ Tabarī (ii, p. 156) in recording this campaign calls the latter 'Turks' ($Atr\bar{a}k$).

[.] وهو عامل زياد على خراسان : ii, p. 161

³ Scythians and Greeks, p. 122.

Χοῦνοι, Φοῦνοι, and Οὖννοι of the Western chroniclers. These tribesmen, it is thought, may have been related to the Hiung-Nu hordes that, we are told, overran Central Asia in the second century B.C. At all events Ephthalites were in full force in the fifth century A.D. in the Cisoxine lands, since they captured the province of Khurāsān and exacted tribute from the dispossessed Sassanians. 1 Again, later on in the next century, we find them in the reign of Hormuzd IV (A.D. 579-590), penetrating by force of arms as far as Badhghīs and Herāt, according to Tabarī; 2 and, as Marquart (ibid., p. 65) adds, 'without doubt with the sanction of the Khākān of the Turks'. For years the internecine struggle lasted between the Sassanian monarchy and these nomadic peoples and the vast conglomeration of Turkish tribes. The encroachment of the Arab forces later on was encouraged, no doubt, by this very discord and lack of cohesion amongst the racial elements involved. The Ephthalite Principality of Herāt and Badhghīs actually offered little or no resistance to the Arab advance in A.H. 31. But it was not always so. Various tribal revolts of the 'Turks' (آزاك)—as the Ephthalite tribes are sometimes called in the Arab historians—broke out in the ensuing years. As Ephthalites they finally pass from the annals with the downfall of their leader the Tarkhān Nēzak (طرخان ننزك), who rose in rebellion in A.H. 90 and was killed by the great Arab general and viceroy of Khurāsān, Kutaiba ibn Muslim, who, as we shall see later, played so conspicuous a part in the subjugation of Bukhārā. That event, however, takes us beyond the period covered by the present coins.

III. The 'Abbāsid Governors in Tabaristān

For over a century after the great Sassanian Empire succumbed to the advancing armies of Islam the province of Ṭabaristān,³ protected on the south by the lofty Elburz mountain range, still stubbornly managed to maintain its independence. After the death of Yezdigird III, the last monarch of the house of Sāsān, a certain Gīl Gāubāra, son of Gīlānshāh, contrived by his warlike abilities to found a dynasty

¹ See Marquart, *Ērānšahr*, p. 62 f. ² i, p. 991.

³ The name applied to this territory in our modern gazeteers is, of course, Mazanderan (Arabic, Māzandarān). The province lies in the north of Īrān to the south-east of the Caspian Sea. The old historic name is, however, retained in this Catalogue for convenience since it is the one which occurs without exception on all the coins of these governors with whom we are dealing.

(c. A.D. 686) in the highlands of Ṭabaristān, which lasted for four generations until, under the 'Abbāsid Caliph al-Manṣūr, the country ceased to be autonomous. During the latter part of this period (from A.D. 711-761) these Zoroastrian princes or Ispahbads,¹ as they designated themselves, struck silver coins after the style of the Sassanian drachms of Khusrau II in much the same way as the Umaiyad governors in the Īrānian provinces had done previously. The distinguishing feature of the Ṭabaristān coins, however, was the fact that they were of much smaller module, being actually hemidrachms or half dirhams. As on the Sassanian coins their legends were written in Pehlevi, and their dates were reckoned in terms of a new era starting from the 11th June 652 (= A.H. 31), the beginning of the solar year following the death of Yezdigird III. This era is referred to in this Catalogue as the Post-Yezdigird era (P.-Y.E.).²

The coins issued in Tabaristān after the 'Abbāsid governors had displaced the last Ispahbad, Khurshīd,³ in A.H. 144 (A.D. 761) carried on the traditional characteristics of this provincial coinage system, namely, size, conventional portraiture, mint-name, use of the Post-Yezdigird era, and, to begin with, the exclusive use of Pehlevi legends, which changed finally, soon after the Arab governors inserted their own names on the coins, to a combination of Pehlevi and Kufic (i.e. monumental Arabic) script. The coinage was in silver; a possible use of copper may be admitted, but gold coins of this type are unknown.⁴

As our knowledge of the history of Ṭabaristān in these times is extremely scanty it will be readily seen that these carefully dated coins with governors' names furnish us with contemporary evidence that is of first-class value. The main extant historical account is preserved in Ibn Isfandiyār's $Ta'r\bar{\imath}kh$ -i-Ṭabaristān 5 compiled about A.H. 613 (A.D. 1216), though it is based on older works now lost. Ibn Isfandiyār's facts were more or less repeated with slight additions and alterations—in the characteristic manner of oriental historians—by Zahīr al-Dīn al-Mar'ashī about 260 years afterwards, and later still by Khwandamīr in his Ḥabīb al-Siyar.6

² See above, p. xxvii, for this and other eras used on Arab-Sassanian coins.

⁴ See p. 161 for reputed gold and copper coinage.

¹ The Arabic form of the title is Iṣbahbādh إصهاذ.

³ Sometimes, but erroneously, called <u>Khurshid</u> II on account of an unfortunate, but quite pardonable, numismatic error on the part of Mordtmann, first detected by Prof. Vasmer (*Encycl. of Islam*, art. *Māzandarān*, p. 429).

Abridged English translation by E. G. Browne in the Gibb Memorial Series, vol. ii.
 B. Dorn, Sehir-eddin's Geschichte von Tabaristan, Rujan und Masanderan; and Die

Several attempts were made by the Muhammadans to penetrate into Tabaristan in an endeavour to conquer the Ispahbads, or hereditary princes of that region, before the final subjugation of the territory under the 'Abbasids. The first advance is said to have been made under the early successors of the Prophet. About A.H. 18 or 22 (A.D. 639 or 642/3), under the Caliph Omar ('Umar), Suwaid ibn 'Amr ibn Mukarran, and later (c. A.H. 29/30 = A.D. 650/1), in the Caliphate of Othman ('Uthman), Sa'id ibn al-'As, governor of Kufa, both made attacks but with little success. Next, under the Umaiyad Caliphs, other abortive attempts at invasion were planned. Maskala ibn Hubaira al-Shaibānī during Mu'āwiya's reign led an army (c. A.H. 42 = A.D. 662 or A.H. 54 = A.D. 673) into the fastnesses of the country only to perish with the greater number of his mercenaries. In A.H. 77 (A.D. 696) Ishāk ibn Muḥammad ibn al-Ash'ath commanded troops in Ṭabaristān. About the same period Sufyān ibn al-Abrad was sent by Hajjāj, the Umaiyad viceroy of the East, to suppress Katarī (q.v.), the rival Caliph and leader of the Khārijites.

According to one account 1 Sufyān defeated and slew Ķaṭarī and remained with his army in Ṭabaristān until recalled in A.H. 82 = A.D. 701; another version 2 has it that the Ispahbad Farkhān (or Farrukhān) made a pact with Sufyān to rid him of Ķaṭarī in return for freedom from molestation by the Arabs. In the resulting combat Ķaṭarī was slain by the Ispahbad (c. A.H. 79 = A.D. 698).

That the native ruler of Ṭabaristān considered it politic to keep on friendly terms with the Umaiyads is confirmed not only by this last tradition but also by that given by Ṭabarī³ and Ibn al-Athīr,⁴ to the effect that he surrendered 'Umar ibn Abi'l-Ṣalt, who had sought refuge in his domain, out of fear of incurring the hostility of Ḥajjāj (A.H. 83 = A.D. 702). In A.H. 98 (A.D. 716) a determined effort was made by Yazīd ibn al-Muhallab to gain possession of Ṭabaristān, but with indifferent success.

In the reign of the last Umaiyad Caliph Marwan II (A.H. 127-132 =

Geschichte Tabaristan's und der Serbedare nach Chondemir, St. Petersburg, 1850. The latter is an extract from the Persian Chronicle with a German translation. Fortunately, the historical data relating to Tabaristān contained in these historians, as well as incidental references and details in Tabarī, Ibn al-Athīr, Balādhurī, and Ya'kūbī, have recently been collected by H. L. Rabino in his monographs. (See f.n. p. lxxv.)

¹ Tabarī, Annales, ed. de Goeje, ii. 1021.

² Ibn Isfandiyār, ed. Browne, p. 104. See also Biographical Notes, above, p. lxi. Unvala (*Numismatique du Țabaristān*, p. 31) has actually made Kaṭarī a general of 'Abd al-Malik.

³ ii. 1119.

A.D. 744-50), when revolt was the order of the day, the upheaval in the Caliphate had reverberations in Ṭabaristān. Abū Muslim, the great protagonist of the 'Abbāsid party, in the course of his victorious campaign in the East managed to obtain the nominal allegiance of the Ispahbad in A.H. 131 (A.D. 748). But Ṭabaristān was still independent. It was not, in fact, until the time of the second 'Abbāsid Caliph, Manṣūr, that the Arab governors obtained firm control of the province, and the last Ispahbad, Khurshīd, was ousted from his patrimony.

The approximate date when this conquest of Tabaristan by the 'Abbasids became a fait accompli was the year A.H. 141 = A.D. 758. The defeated Ispahbad, Khurshīd, however, did not die until A.H. 144 = A.D. 761. And, in fact, we actually have coins bearing his name dated as late as P.-Y.E. 114^{1} (= A.H. 148 = A.D. 765). These posthumous coins were almost certainly issued by the 'Abbasid governors. It is noticeable that in the year P.-Y.E. 110 = A.H. 144 there is a marked change in the bust of the Ispahbad depicted on these coins—it is broader. Although they bear no Arabic legend or name, or any definite indication that they were official 'Abbāsid issues, these coins have been included in this Catalogue as Muhammadan mainly on the grounds of chronology.2 Be that as it may, the earliest known Tabaristan coin of Arab-Sassanian type that we can with certainty regard as having been struck by the Muhammadan invaders is dated P.-Y.E. 116 (= A.H. 150= A.D. 767). In this case the name of the deceased Khurshid has been replaced by that of the 'Abbasid provincial governor, a practice which was to continue in the case of succeeding governors for a quarter of a century, as can be seen from the list on pp. lxxiv-lxxv.

In addition to the numismatic evidence given in the list one must reckon the following:

- (a) The posthumous coins of <u>Khurshīd</u> with dates ranging from P.-Y.E. 110-114 = A.H. 144-148 = A.D. 761-765. These partly fill the gap before the coins with the name of <u>Kh</u>ālid ibn Barmak.
- (b) The AFZUT or so-called 'anonymous' coins with dates from P.-Y.E. 129-143 = A.H. 164-178 = A.D. 780-794. This group contains isolated examples with the name of the governors Jarir' and Ma'add

¹ See Catalogue, p. 203, for a discussion of the coins attributed to the year 115.

² If one were to exclude these posthumous <u>Khursh</u>īd coins because of the absence of Arabic legends one would for the same reason have to do likewise with the majority of the AFZUT coins which occur later in the same series (see Catalogue, pp. 153 ff.). Unvala in fact has done so—an opinion which will be considered later.

³ Unvala's suggestion (Numismatique du Tabaristān, p. 12, § 5) that the name of Jarīr was a contremarque (sic) added to the coins when they circulated in the part of Tabaristān

written in the margin in the years 135 and 138 respectively. A section of the AFZUT coins fills the gap between Yaḥyā ibn Dā'ūd al-Ḥarashī and Jarīr. An attempt has been made¹ to attribute these AFZUT coins to the Zoroastrian insurgents who rose against the 'Abbāsid government in support of a native prince, Windād Hormuzd. This theory seems to me to be most improbable for the following reasons:

- (i) Some of these AFZUT coins bear the names of Arab governors in their margins, as well as Arabic expressions (such as غزين) and abbreviations (such as عند). If these coins were the product of a national movement they would be most unlikely to have legends written in the language of the hated oppressors.
- (ii) If they were struck for Windād Hormuzd it is very surprising that they do not bear his name, though some of them have the names of Arab governors in Arabic.
- (iii) They ceased being struck about the same time as the last coins of Tabaristān with the names of 'Abbāsid governors, and some time before the final submission of Windād Hormuzd to the 'Abbāsid Caliph Hārūn al-Rashīd.
- (iv) The AFZUT type of coin can be proved to have been used by the Arab conquerors as in the case of the coin of al-Fadl ibn Sahl (see below) as well as previously under the Umaiyads (see Catalogue, p. 124 f.). So why not in the present case?
- (c) The isolated coin with AFZUT obverse and with the name of al-Fadl ibn Sahl. This coin is dated P.-Y.E. 161 = A.H. 197 = A.D. 812. It shows the survival at a late date of the Tabaristān type, particularly the peculiar obverse of the coins of Sulaimān. But as the regular series of the 'Abbāsid coins of Tabaristān ceases with the year P.-Y.E. 143 (A.H. 178) it has not been considered necessary to extend the above list of governors to include al-Fadl.

The administration of Ṭabaristān under the 'Abbāsid Caliphs of Baghdad (Madīnat-al-Salām) was entrusted to a series of military governors, who resided in the principal towns of the country such as Amul or Sārī, or at Kajū, capital of al-Rūyān, a district which had for the first time under 'Umar ibn al-'Alā been attached to the province of Ṭabaristān. These governors or their deputies, or perhaps at times the leader of a military expedition, seem to have struck coins independently of one another in the same years with their own names

then under the control of the Arabs is ridiculous. The name is not a countermark but part of the original impression.

¹ Unvala, op. cit., p. 11, § 27; p. 13, § 9; p. 33, § 19 f.

LIST OF THE 'ABBĀSID GOVERNORS IN ȚABARISTĀN (A.H. 141-178 = A.D. 758-794)

The following list, compiled from the extant literary and numismatic sources, covers only the period of the coins described in this section of the Catalogue. The coin evidence is based on the conclusions reached by the writer. One or two dates which have not been verified at first hand, or are questionable, but which may possibly be correct, have been added within round brackets.

	Coin Evidence (Dates	Approximate Dates	
Literary Evidence	according to Post-Yezdigird Era)	A.H.	A.D.
Abu'l-Khasib		c. 141-	758-
Abū <u>Kh</u> uzaima <u>Kh</u> āzim

¹ For further details of these governors, reference should be made to H. L. Rabino's article 'Les Dynasties du Māzandarān' in J.A., 1936, pp. 397-474. The same author has since written a monograph, entitled Gouverneurs califiens du Tabaristān, which he has very kindly permitted me to see in manuscript, and which he hopes to publish shortly.

² Although Rauh, so far as we know, had no coins of Arab-Sassanian type struck with his name we do have dirhams of conventional Muhammadan type struck for Tabaristan in the years A.H. 147 and 148 bearing his name cet in the margin; see Lane Poole, B.M. Cat., ix, p. 43, no. 54 d, pl. iv, where the name was read, however, as 7 i. The specimen dated 148 came to the B.M. in 1922 from Valentine (Codrington). An earlier dirham of Tabaristan of conventional type dated 146 was published by Porter (in Num. Chron., 1921, p. 318). It is in the American University of Beirut. It has no governor's name, as I was able to verify from the coin itself. Zambaur in his review of Porter's article (in Num. Zeit., 1922, p. 5) draws attention to the fact that he himself published an earlier 'Abbāsid coin of Țabaristān, a fels of A.H. 145 (in his Contributions, i, no. 46). In the case of Zambaur's coin the date is defectively written سنة خدس which might readily stand for 155. Below the obverse central legend of Zambaur's coin is)-O-(which may be simply an ornament, as he takes it, or else, as I am 'Umar, for 'Umar ibn al-'Alā. There is actually a fels—though in Num. Zeit. he calls it a dirham (sic)!—dated 157 published على يدى عبد الله عمر بن العلا by Zambaur (ibid., no. 47) with the marginal legend in Arabic على يدى عبد الله عمر بن العلا by the agency of Allah's servant 'Umar ibn al-'Ala', and with the initial letter c on the Sassanian coins of Tabaristan described in this Catalogue and whose earliest coin is dated P.-Y.E. 120 = A.H. 155. This date would fit the circumstances.

on them, as can be deduced from several instances of overlapping dates in the above table. This seems to indicate some measure of delegation of authority.

The natives of Ṭabaristān seem to have been, on the whole, well treated by their conquerors, provided they paid the annual taxes and maintained the fighting strength of the garrisons at an adequate standard. Statistics have come down to us which reveal the presence in the early days of 'Abbāsid control of some 46 garrisons throughout the land with a complement of 40,500 soldiers. The revenue was likewise on a large scale. The land-tax alone yielded 4,000,000 dirhams.¹

But the 'Abbāsid occupation of Ṭabaristān was subject at times to violent interruption by the recrudescence of revolt in favour of a restoration of a branch of the native dynasty. The most outstanding example was the rebellion already mentioned of Windād Hormuzd.

Notes on the Governors and their Coins

(i) Khālid ibn Barmak (خالد بن برمك)

Shortly after the foundation of the 'Abbāsid dynasty <u>Kh</u>ālid occupied the important position of vizier. Of Īrānian origin, he was the head of the famous Barmecide family of court favourites who under Hārūn al-Rashīd perished so tragically.² Various dates for his governorship have been proposed by previous writers.³ The coins bearing his name in Pehlevi (HALIT) and issued for Ṭabaristān show that he was in power there between A.H. 150/1 and 154/5.⁴ His administration was apparently a wise one. He was on friendly terms with the native prince Windād Hormuzd, who was allowed a certain measure of control in the mountain fastnesses. <u>Kh</u>ālid's conciliatory policy is apparently reflected in his coins which have legends in Pehlevi script only.

(ii) 'Umar ibn al-'Alā (عمر بن العلا)

Although 'Umar was appointed governor in succession to Khālid in A.H. 155 his connexion with Tabaristān was earlier than this. At the

¹ Ya'kūbī, Les Pays, trans. by G. Wiet, p. 81.

² See L. Bouvat's monograph Les Barmécides d'après les historiens arabes et persans, Paris, 1912.

³ See Bouvat, op. cit., p. 40, who gives 148-152; so also Barthold in Encycl. of Islam, i, p. 692; Zambaur (Manuel, p. 187) has 148-154.

⁴ Both Ibn Isfandiyār and Zahīr al-Dīn state that he governed for four years.

conquest of the province under Abu'l- \underline{Kh} asīb in a.h. 141, 'Umar had proved himself to be very valuable as a guide to a terrain with which he had for some years become familiar as an exiled murderer.¹ 'Umar's first term as governor may be reckoned from his coins as being between a.h. 155 and 160 2 while his second term may be placed between a.h. 162 and 164.³ As for his third term (c. a.h. 167) we have no definite numismatic evidence. Some of the afzut coins of this period may be his, though none of them so far has been found to bear his name.

During his first term of office 'Umar's coins have his name-legends in three varieties: (a) in Pehlevi; (b) in Pehlevi and Arabic; and (c) in Arabic. The coins issued during his second period bear his name in Arabic only. Unvala (op. cit., p. 22, note) argues from the use of both Pehlevi and Arabic legends for the name of 'Umar that such coins were intended for two different regions of Ṭabaristān, the mountains and the plain, and that they emanated from two mints, Sārī and Āmul. This is most unlikely. On the same analogy one might declare that Khālid's coins, which have no Arabic legends, were intended for the mountainous regions where Windād Hormuzd had his semi-protectorate.

Besides these coins of Arab-Sassanian type 'Umar was also responsible for the minting of coins of conventional Muḥammadan type in Ṭabaristān (see foot-note, p. lxxv). These will be included in a subsequent volume of this Catalogue.

(iii) Sa'īd ibn Da'laj (سعيد بن دعلج)

For three years (A.H. 160–162/3) ⁴ Sa'īd governed Ṭabaristān between the dismissal of 'Umar ibn al-'Alā and his reinstatement. These two governors are the only ones in this series who have not only their own but their father's names on some of their coins. In both cases such varieties are rare. There is no example so far in the National Collection. From Sa'īd onwards also, the governor's name is invariably written in Arabic.

¹ Zambaur (op. cit., p. 187) makes him governor for the first time in A.H. 141. He was actually then in a subordinate capacity as a commander of troops.

² Zambaur (op. cit.) places it between 154-158. The latter date is due to the tradition that 'Umar was deposed by the new Caliph al-Mahdī who succeeded in that year, but there is no reason why the Caliph's displeasure should not have been vented some time after his succession. The coins, moreover, support this.

³ While Ibn Isfandiyār makes 'Umar's second term of office last only one year, Zahīr al-Dīn records it as three years. The coins support the latter.

⁴ Both Ibn Isfandiyār and Zahīr al-Dīn are agreed on three years as his period of office, a fact substantiated by the coins.

(iv) Yaḥyā ibn Mikhnāķ (يحيى بن مخناق)

This governor, who succeeded 'Umar Ibn al-'Alā after the latter's second term of office, is said to have been a pleasant official during the short time he was in power (A.H. 164–165). He was succeeded, however, by 'Abd al-Ḥamīd Maḍrūb (165–166) whose imposition of new taxes on the native populace provoked the celebrated insurrection of Windād Hormuzd.

(v) al-Ḥarashī (الحرشي)

In A.H. 166 a new governor was in control, another Yaḥyā, namely, Yaḥyā ibn Dā'ūd ibn Mamdūd al-Ḥarashī. In order to avoid confusion with his predecessor of the same name he has simply Ḥarashī on his, so far unique, coin. Mr. Rhuvon Guest tells me that Ḥarashī's father was first cousin of the king of Ṭabaristān, according to al-Kindī, Governors and Judges of Egypt, p. 122.

(vi) Sulaimān (سليمن)

Between Ḥarashī and Sulaimān none of the governors mentioned by the historians have so far been found on coins. But, considering that Ḥarashī's coin became known to us only in 1935, it is not improbable that the missing names may one day be found. Sulaimān is called Ibn Mūsā by Ibn Isfandiyār but Ibn Manṣūr by Ṭahīr al-Dīn. As his father's name is not found on the coins it is impossible to be certain which is correct. Sulaimān's governorship apparently lasted between A.H. 171 and 173.² His coins are remarkable in one respect. They have a geometric figure with an Arabic legend inserted in place of the face of the traditional figure of the Ispahbad. It is conceivable that this is an iconoclastic tendency on the part of Sulaimān in accordance with the strict Muḥammadan veto on the employment of images. A similar obverse type is revived on the unique coin of Faḍl ibn Sahl at a later date (Catalogue, p. 160).

(vii) Jarīr (جرير)

Jarīr's name does not appear amongst the governors of Tabaristān in the annalists. He was no doubt a regional commissioner. His coins are known between A.H. 170 and 172, overlapping some of Sulaimān's. Certain of the AFZUT coins also bear his name in the margin.

² Both Ibn Isfandiyār and Zahīr al-Dīn mention eight months, but the coins are definitely against this.

¹ Mordtmann (Z.D.M.G., 1865, p. 495; 1879, p. 110) actually ascribed the known coins of Yaḥyā (ibn Mikhnāk) to al-Harashī. Zambaur (Manuel, p. 187) has done the same.

(viii) Ma'add (معدّ)

Like Jarīr, Ma'add is only known from his coins of the year A.H. 173 (P.-Y.E. 138). He may have succeeded the former as sub-governor. A unique AFZUT coin has his name in the margin (Flag. 2, p. 158).

(ix) $H\bar{a}n\bar{i}$ (هاني)

Hānī ibn Hānī is mentioned by the historians as the successor of Sulaimān. Their coins overlap somewhat. Hānī's term of office, according to the numismatic evidence, was between A.H. 172 and 173. He is praised for his benevolent guidance of affairs. His coins have the Arabic letter & below his own name. If this stands for Justice' it seems not out of place in such a context. Unvala (op. cit., p. 12) mentions a variety without the & below the name—incidentally, he is wrong in calling it a countermark. Amongst the numerous examples of Hānī's coins that I have examined I have never encountered such an instance. One of the supposed cases quoted by Unvala (no. 1617) is the coin of Hani dated 138 which is in the Copenhagen Museum. This is the coin catalogued by Østrup (no. 85) which I have been enabled to illustrate in this Catalogue (Pl. XXXVIII. 13). It can readily be seen that Unvala is wrong and that the letter & is actually below the governor's name. This leads me to be very sceptical of his other citations which I have been unable to test.

(x) Mukātil (مقاتل)

History is silent regarding Muķātil. His coinage, which ranges from A.H. 172-176, shows that he was a sub-governor contemporary with Sulaimān, Jarīr, Ma'add, Hānī, 'Abdallāh, Ķudaid, and Ibrāhīm. Considering the comparatively lengthy term of office that he had, it is surprising that no mention of him has survived in the standard histories.

(xi) 'Abdallāh [ibn Kaḥṭaba] (عد الله بن قحطة)

'Abdallāh, according to the historians, was the successor of Hānī. It is permissible to regard him as a son or descendant of the renowned general Ķaḥṭaba who helped to establish the 'Abbāsid dynasty. 'Abdallāh's name appears on coins between the years A.H. 174–176. His coins are by no means common. The unusual varieties recorded by Unvala are commented on in the Catalogue (p. 151).

(xii) Kudaid? (قد بد)

It is only recently that the coinage of this new governor—unrecorded by the historians of Tabaristān—has come to light. Even his name is by no means certain, owing to the ambiguity of the Kufic script in which it is written (see U. 16, p. 152). His sole coin date is P.-Y.E. 140 = A.H. 175. This would indicate that he was a sub-governor under 'Abdallāh ibn Ķaḥṭaba.

(xiii) Ibrāhīm (ابراهیم)

Like Muķātil and Ķudaid, his contemporaries, Ibrāhīm has left no trace of his activities on the pages of history. His rare coins, however, show that he was in office during the years A.H. 175–176.

(xiv) al-Faḍl ibn Sahl (الفضل بن سهل)

Like the founder of the Barmecide family al-Faḍl was of Īrānian origin. He was converted to Islam only in A.H. 190, some seven years before the unique coin of his in this series was struck. After the death of the Caliph Hārūn al-Rashīd in 193 occurred the struggle between his sons al-Amīn and al-Ma'mūn for their rights. Al-Faḍl supported the latter. Following the defeat of Amīn's forces in 195 al-Faḍl had many honours heaped upon him. Ma'mūn gave him the post of governorgeneral of the Eastern Provinces and the title of <u>Dhu'l-Ri'āsatain</u>, 'Lord of the Two Commands' (i.e. chief minister of state and commanderin-chief of the army). Both his name and title appear on this remarkable coin of his struck for Ṭabaristān in P.-Y.E. 161 = A.H. 197.¹ By 202/3 he had fallen from grace and the Caliph had him assassinated.²

IV. The 'Abbāsid Coins of Bukhārā

Geographically these coins bring us across the celebrated River Oxus, our modern Amu Darya, into the Transoxine province of Sughd, the classical Sogdiana, in Central Asia, the two principal towns of which were Bukhārā (نخارا) and Samarkand (سمرقند). The Oxus, or 'the River' (al-Nahr), as the Arabs called it, was the general traditional line of

¹ His name also appears on the conventional 'Abbāsid coins, examples of which will be included in a subsequent volume of this Catalogue.

² The continuance of his title ذو الرئاسين on coins of Raiy (Muḥammadīya) as late as A.H. 204 rather impugns the authenticity of the historical records.

demarcation between the Persians and the Turks, that is, between Iran and Tūrān. At the time of the Arab penetration of Transoxiana numerous tribes of either Turkish or Ephthalite or mixed origin were in occupation. It is of interest in this connexion to note the statement of Mas'ūdī:1 'The Ephthalites (Hayāṭila) are the Sughd who live between Bukhārā and Samarkand.' We have already considered the Ephthalite power in the Cisoxine province of Khurāsān (see above. p. lxix). The intimate connexion between the two provinces, with their tribal relationship, is exemplified in the old-fashioned genealogical system which makes Khurāsān and Haiţal (the singular of Hayātila) the descendants of Noah.2 The Arabic historians, however, do not clearly distinguish between Hayāṭila (Ephthalites) and Atrāk (Turks), so that such racial classifications have to be taken with reserve. We know that Sogdiana was invaded by Turkish hordes at the end of the seventh century A.D. (c. A.H. 70); this was after the first Arab inroads. We also find an alliance being made between the natives of the Transoxine Province and the Turkish Khāns in order to expel the Muḥammadan governors.

Briefly the early history of the Arabs in Sogdiana, during the period with which we are concerned here, may be outlined as follows:

In a.h. 54 (a.d. 674) 'Ubaidallāh ibn Ziyād, the Umaiyad governor of Khurāsān, crossed the Oxus and encountered the army of the native prince whose title was the Bukhār-Khudā, literally 'Lord of Bukhārā'. The latter was defeated and a treaty was made, whereby tribute was paid to the conquerors. Two thousand of the enemy soldiery are said to have been transported by 'Ubaidallāh to Baṣra, his capital in 'Irāk, to form his personal bodyguard. In this we can see foreshadowed the later practice of the 'Abbāsid Caliphs of surrounding themselves with bands of Turkish mercenaries.

The available historical traditions of the period are far from complete or satisfactory. A semi-legendary figure of a Turkish queen-regent is credited with a role of some importance in the political affairs following the first Arab invasion. She is given the familiar Turkish designation of $\underline{Kh}\bar{a}t\bar{u}n$, or Lady. Tabarī³ calls her \underline{Kabaj} - $\underline{Kh}\bar{a}t\bar{u}n$, and makes her the wife of the ruling king of the Turks. But there is a great deal of discrepancy in the fragmentary accounts of her regency. The consideration that her son Tughshāda, on whose behalf she is sometimes said to have taken over the reins of government after her husband's death, is

¹ Murūj al-Dhahab, ii, p. 195, quoted by Marquart, Ērānšahr, p. 308.

² See Marquart, *ibid.*, p. 307.

apparently still only a youth some twenty years later, points to some chronological error in the historians.

After 'Ubaidallāh, Sa'īd ibn 'Uthmān in A.H. 56 carried the occupation of Sogdiana still farther. But the tide of conquest receded for a few years till Salm ibn Ziyād led a memorable expeditionary force into the province and spent the winter in Samarkand (A.H. 63-64). The general disruption about this time throughout the Caliphate not unnaturally led to a relaxation of the Arab control in Transoxiana. It was not until A.H. 77 that Umaiya ibn 'Abdallah endeavoured to restore the Umaiyad suzerainty in the province. But he was soon recalled and the administration of the Eastern Provinces and the extension of the Islamic state passed into the hands of the redoubtable Ḥajjāj ibn Yūsuf. Some years later he recommended to the governorship of Khurāsān the distinguished Arab general Ķutaiba ibn Muslim, who succeeded where his predecessors had failed, and for the first time firmly established Arab control in the territory across the Oxus. This was about the years A.H. 89-91. Nēzak, the Ephthalite rebel leader, was one of the many native princes in revolt who were destroyed in the campaign. But, generally speaking, Kutaiba wisely utilized these members of the petty dynasties of the land for his own purposes. Under Arab governors dispatched from Khurāsān the native chieftains retained their estates and a measure of local government. Kutaiba, for example, diplomatically installed Tughshāda, the son of the old Queen-Regent Khātūn, as Prince of Bukhārā. The latter strengthened his own position by becoming a Muslim, and is said to have ruled for thirty years until, about A.H. 121, he was murdered. But the Arab occupation of Sogdiana was far from consolidated. Especially after the death of Kutaiba in A.H. 96 we find a set-back to the Muhammadan advance. The Turkish tribes were not all willing to accept the loss of their former independence, and they appear to have received certain support from China. There are several records of Chinese embassies extant. It is also of some interest to note the appearance on the scene, during this period of flux, of a young Sassanian prince Khusrau, son of Fīrōz and grandson of Yezdigird III. His endeavour to restore the kingdom of his forefathers was unavailing. There were more formidable forces in conflict. After many reverses of fortune the Muhammadans once more gained the ascendancy in Transoxiana, following the appointment of the very capable Nasr ibn Saiyār as governor of Khurāsān and its Transoxine dependencies. Peace and prosperity came to Sogdiana. The payment of taxes—that ever

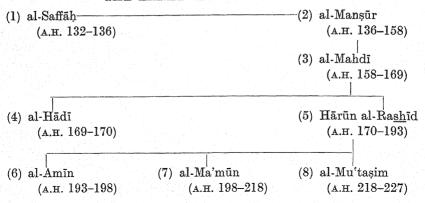

recurring source of contention—was regulated, though not without opposition. All landowners were compelled to pay the land-tax (<u>kharāj</u>), irrespective of their being Muslims. Many natives had gone over to the new faith of Islam expressly to avoid this taxation. But only non-Muslims were required to pay the poll-tax (*jizya*) as well. The revolutionary movements that hastened the downfall of the Umaiyad Caliphate, however, disturbed the last years of Naṣr's administration. He died in A.H. 131, having been spared the final triumph of Abū Muslim and the 'Abbāsid partisans.

About this time also we find mention again of the Bukhār-Khudā. This time it is Kutaiba, son of Tughshāda, who had been so named after the first great Arab conqueror of the land. He allied himself with Abū Muslim and helped to suppress a counter-revolutionary movement. Nevertheless, soon afterwards he is said to have been put to death by Abū Muslim's orders on the ground of apostasy. Whether he is also to be identified with a son of Tughshāda called Sakān (image), recorded by Narshakhī, is problematical. His brother (or son?), the Bukhār-Khudā Baniyāt, succeeded him. But having associated himself with the religious revolt of al-Mukanna', 'the Veiled Prophet of Khurāsān', he perished in the latter's downfall. The title, however, still survived as late as the Sāmānid dynasty.

Under the early 'Abbāsid Caliphs the administration of Transoxiana remained under the central control of the governors of Khurāsān. Time and again these governors were called upon to pacify or suppress rebellious elements in their territories. With these numerous disturbances we are not directly concerned here. The names of several of the governors, such as Musaiyab ibn Zuhair and Ghiṭrīf ibn 'Aṭā, are, however, linked with the history of the special Bukhārān dirhams which are described in this Catalogue. They will be dealt with in due course. So far as the subsequent history of Transoxiana is concerned, we can safely draw to a close with the successful policy of the seventh 'Abbāsid Caliph al-Ma'mūn (A.H. 198–218), who encouraged his Īrānian subjects by appointing them to administrative offices. The resplendent period of Islamic culture that resulted in these Central Asian Provinces must in large measure be credited to him.

As the coins described in this section of the Catalogue fall within the reigns of the first 'Abbāsid Caliphs the following dynastic data may prove useful:

THE EARLY 'ABBASID CALIPHS

The coins of Bukhārā with Sassanian types are, roughly speaking, of two classes: (1) those issued by the native Bukhārān princes, and (2) those issued by the Arab governors. All the second class have Arabic legends. It is with the latter that we are more particularly concerned in the present study, though it is necessary to deal briefly with the antecedent class as well.

The remarkable feature of all these coins of Bukhārā is that they are based on the coin-types of the Sassanian King Bahrām or Varahrān V—Bahrām the Mighty Hunter of Persian legend—who reigned three centuries before (a.d. 420–438). He had led a successful expedition against the Ephthalites in Khurāsān towards the end of his reign, and the extension of Sassanian influence into the Transoxine provinces thus inaugurated led, as we can imagine, to the circulation of his drachms amongst the populace, who must previously have used Kushān coins. This fact must account for the preference that the later Bukhārān princes during the Umaiyad Caliphate had for the continuance of this coin-type, whereas their Arab contemporaries in Īrān, almost without exception, favoured the types of Khusrau II (a.d. 590–628). Even in the Cisoxine province of Khurāsān the Arab-Ephthalite coinage, as we have seen (p. lxv), followed the Khusrau tradition.

The family resemblance between the Bukhārān coins and their prototype, the Sassanian drachms of Bahrām V, is readily seen in Plate XXVIII. Beyond a general gradual debasement the obverse and reverse types vary but little. The greatest change takes place in the legends. The reverse legend on Bahrām's coin is the Pehlevi mintname MRW (Merv), which corresponds to the later Pehlevi form of the

word on Arab-Sassanian coins (see Table of Mint-Names, no. 41). This disappears from the Bukhārān imitations, which have no mention either of mint or date.

The obverse Pehlevi legend on the Sassanian drachms of Bahrām V, beginning behind the king's head and running anti-clockwise, is as follows: MZDYSN BGI RAMSHTRI VRHRAN MLKAN MLKA (i.e. Mazda-Worshipper, divine being, prosperity of the realm, Varahrān, King of Kings). Of this legend the only portion that survives in a debased form on the Bukhārān imitations is that to the left of the king's head. The Pehlevi legend to the right of the king is displaced by another in a script that may conveniently be termed Bukhārān. This will be considered later. The debasement of the Pehlevi portion can be demonstrated from the following examples:

Thomas (Num. Chron., 1881, p.121, and Indian Antiquary, 1879, p.271) regarded the legend on the last two examples as Arabic for سنّى Sunnī, 'orthodox'. Markoff (Registre, p. 15) read it as the Arabic سمح. Allotte de la Fuÿe (Num. Chron., 1927, p. 167) also regarded it as Arabic, but of uncertain significance. Lerch (Sur les monnaies des Boukhâr-Khoudahs) correctly, in my opinion, considered it as derivable from the Pehlevi. An examination of the above table ought to make this view perfectly natural. For this reason the Museum specimens of this class are not included in the present Catalogue, except for a few representative specimens for purposes of illustration, since I do not consider that there is any evidence that they were actually issued by the Muḥammadan governors of Bukhārā. It is stated in some historical accounts that the minting of Bukhārān silver coins by the native princes was begun during the Caliphate of Abū Bakr (A.H. 11-13). This may or may not be true. But it is certain that at least during the Umaiyad Caliphate, and in the early years of the 'Abbāsid régime up to the appearance of the Bukhārān coins with the Arabic names of 'Abbāsid Caliphs and governors, these native dirhams were issued.

They unfortunately have neither date nor personal name of a ruler nor any other detail that could establish their precise chronological position. We can only conclude that most of them are pre-'Abbāsid.

Even this dating has only been made possible chiefly by the research of Pierre Lerch, who in 1876 was the first to read the Bukhārān, or as he called it the Sogdian, script on these coins, and was therefore enabled to attribute them to the Princes of Bukhārā. When Fraehn (Novae Symbolae, Pl. ii, no. 14, pp. 45-6) first published examples in 1819 he ascribed them to the Khazars. Later (in his Ibn Fozlan, p. 78) he doubted this, and regarded them as the coinage of the Turks of the tenth century who overcame the Sāmānids. Stickel (Handbuch, ii, p. 122) thought likewise. Then appeared Lerch's valuable contribution to the International Congress of Orientalists at St. Petersburg in 1876 (published in 1879 in the Travaux, vol. ii, pp. 419-29). He considered the undeciphered legend to consist of eleven characters in a form of script derived from Aramaic. His transcription was as follows:

#### i.e. (from r. to l.) Bukhār Khuddāt.

This Bukhārān name-legend incidentally takes the place of the Pehlevi name-legend on the Bahrām V prototypes. Lerch was also able to support his interpretation by quoting the 'History of Bukhārā' (الريخ بخارا) written by Narshakhī, which contains a chapter on the coinage of the country. As this provides historical data of numismatic importance to the present study it is necessary to consider it briefly.

The original Arabic text made by Narshakhī in A.H. 332, and presented to the Sāmānid ruler Nūḥ ibn Naṣr, was afterwards (in A.H. 522) translated into Persian by al-Ķubāwī, though with omissions. A further abridged edition was made by Muḥammad ibn Zufar about A.H. 574, and an unknown historian continued the tale down to the Mongol conquest. The Persian translator incidentally added information mainly from the 'Treasuries of Science' (خوائن العلوم), a book composed by the historian Naisābūrī (see Barthold, Turkestan, p. 15). The text has been published by Ch. Schefer¹ from manuscripts in Paris. The extracts quoted here are based on this edition.

¹ Description topographique et historique de Boukhara par Mohammed Nerchakhy, Paris, 1892. Although he promised to produce a translation, he failed to do so. There is also an edition lithographed in Bukhārā. A Russian translation by N. Lykoshin, supervised by Barthold, was published in 1897 at Tashkent. Lerch himself (op. cit., pp. 426-8, f.n. 1) gives the text of Narshakhī relative to the coinage, and Allotte de la Fuÿe in his article in the Num. Chron., 1927, pp. 159-60 provides a literal translation in French of certain passages from Schefer's text. See also Markoff's Registre, pp. 16 ff.

What then does Narshakhī tell us about the Bukhārān coinage?

- (a) 'Pieces of pure silver were struck in Bukhārā in the Caliphate of Abū Bakr. Previous to this period there was no coinage in Bukhārā' (p. 6). We have already dealt with the first part of this statement above. The second part can only be relatively true. Sassanian and Ephthalite coins must have circulated in Bukhārā before the Arab conquest, but the statement is probably correct if we confine it to coins with the title of the Bukhār-Khudā.
- (b) 'The first person to mint silver in Bukhārā was a king named Kānā (الح) Bukhār Khudāt (بخار خدات) who reigned in Bukhārā for thirty years. At Bukhārā there were merchants who sold linen and wheat who drew his attention to the fact that silver money was minted in other countries. So he ordered money to be minted at Bukhārā in pure silver [نقرة خال ] and commanded his portrait with crown to be engraved thereon. This happened in the time of the Caliphate of the Commander of the Faithful Abū Bakr (May Allah Most High be pleased with him!) and lasted until the time of Hārūn al-Rashīd, when Ghiṭrīf ibn 'Aṭā became governor of Khurāsān in the month of Ramaḍān A.H. 185. This Ghiṭrīf was the maternal uncle of Hārūn al-Rashīd...' (p. 34).

The numismatic evidence, as we shall see, is against this. It is true that we have Bukhārān coins with the name of the Caliph Hārūn (Catalogue, nos. 338-43, p. 168)—although so far none with Ghiṭrīf's name has come to light—but we have also got examples that can be placed even earlier, namely in the reign of the Caliph al-Mahdī (A.H. 158-169) (Catalogue, pp. 164-7). We shall deal with these later.

Narshakhī has more to tell us of the coinage of Ghiṭrīf, but as it largely deals with a metrological aspect of the Bukhārān coinage it is better considered when we come to that section (see pp. cl f.).

Before we pass on to the Bukhārān coins issued in 'Abbāsid times with legends in Arabic, we must turn our attention for a moment to the above-mentioned ingenious interpretation proposed by Lerch. Drouin (in Revue Numismatique, 1891, p. 224, f.n. 1) did not consider the reading Bukhār Khuddāt as sufficiently conclusive, though he did not supply an alternative. This opinion he based on the variant legends transcribed by Markoff (in his Monnaies Arsacides, &c., p. 133, nos. 1-9) from specimens in St. Petersburg. But Markoff's representations of legends, as I have occasion to point out more than once in this Catalogue, are far from reliable. Prof. Otto Donner (in Journal de la Société Finno-Ougrienne, vol. xiv, p. 37) has likewise been misled, as Drouin was,

by Markoff's alleged variants, which he reproduces. An examination of many specimens of these coins, both in this country and abroad, has shown me that this particular name-legend really varies but slightly. I am glad to note that Zambaur (in *Num. Zeit.*, 1928, p. 126) is of the same opinion that it occurs 'mit nur unwesentlichen Varianten auf allen Münzen dieser Serie'.

The attribution to the Bukhār-Khudās, so brilliantly made by Lerch, is beyond question. Nevertheless, his interpretation of the end of the Bukhārān coin legend is by no means established. Let us consider it. Lerch read it (from r. to l.) thus:

#### TADDUKH HILKS

To substantiate this reading of  $\underline{Kh}udd\bar{u}t$ , Lerch has to trace its history back to a more ancient Zend word  $\underline{Kh}wadd\bar{u}ta$ , meaning 'self-created' ( $\dot{-}\dot{c}c+\dot{c}c$ ), a special appellation of God which he considered came, in course of time, to be applied to the Princes of Bukhārā. But they are more likely to have been designated by the old Īrānian word which expressed the idea of 'God, or Lord' (modern Persian Khudā, cf. the cognate title Khedive) and which had no final t.

The difficulties arising from Lerch's reading of the end portion of the name-legend have been recently reviewed by the veteran numismatist Allotte de la Fuÿe (op. cit., pp. 175 ff.), who has proposed to read the disputed letters as KHUD KANA, thus making twelve letters instead of the eleven of Lerch, thus: 444 KANA instead of DAT. The similarity, and consequent confusion, between D and K in scripts

of the Aramaic family would easily account for the divergence of interpretation in the case of the first letter of this group. As for the last letter, Lerch regarded it as a  $\tau$  merely because of the form of the name Khudāt in Narshakhī. The interesting point about Allotte de la Fuÿe's reading is that the full legend becomes  $Bu\underline{kh}\bar{a}r$   $\underline{Kh}ud$   $K\bar{a}n\bar{a}$ , which can readily be equated with the actual name of the Prince of Bu $\underline{kh}\bar{a}r\bar{a}$  who is credited with introducing the local coinage according to Narshakhī, namely,  $K\bar{a}n\bar{a}$   $Bukh\bar{a}r$ - $\underline{Kh}ud\bar{a}$  (see above, p. lxxxvii).

Objections, however, can be raised against the reading <u>Khud</u> as much as against Lerch's <u>Khuddāt</u> as being linguistically weak. But Allotte de la Fuÿe, who recognized the difficulty, has published a Bu<u>khārān coin (Num. Chron.</u>, 1927, p. 166, no. 4, Pl. VIII. 3) with a different legend from the usual one, and one which, moreover, continues across the bust of the king. In this legend he maintains he finds justification for the form <u>Khud</u> (or hud as he transliterates it).

The transcription of the legend on this coin is given by him (p. 165, 4) as follows:

IOWS: PUKHNAADKHRAKHUB ? DUKHNAADKHRAKHUB

This he interprets as Bukhār Khudaan Khud, i.e. 'the Lord of Lords of Bukhārā'. The title as such would have analogies in the Malkān Malkā, 'King of Kings', of Sassanian, and the Shāhān Shāh, 'Shah of Shahs', of later Persian coins. Obviously, if this is the case, the rest of the legend across the bust contains the prince's name, but, as Allotte de la Fuÿe points out, the script is so uncertain that he cannot find in it either the name of Kānā, or of any other of the Bukhār-Khudās whose names are known to us from the annals. A second specimen of this type was sold at the White King Sale (Schulman, Sept., 1904, Pl. VIII, no. 848), though attributed wrongly to Bahrām Čöbīn. Markoff apparently bought it for the Ermitage, but I have been unable to verify this. The legend, however, in this case is not quite so distinct. After a careful examination of the legends of both specimens from plates, my opinion is that Allotte de la Fuÿe's interpretation is very feasible; although, no doubt, if clearer examples come to light some more decisive conclusion than this may be reached.

The more common legend, already considered, of Bukhar Khud Kānā (if we accept Allotte de la Fuÿe's reading) has a long run. It continues unchanged even along with the Arabic legends, until the times of the Caliph Hārūn al-Rashīd, when finally all traces of the local Bukhārān script disappear from the coins and the legends become altogether Arabic. None of these Bukhārān coins with Arabic legends can be dated

before the early 'Abbāsid dynasty. In the Catalogue they have been classified into two main divisions:

- A. With Bilingual Legends, and
- B. With Arabic Legends only.

We shall now consider these in turn and try to determine their chronology.

#### A. With Bilingual Legends

In all the coins of this group the usual Bukhārān legend referring to the Bukhār-Khudā occurs; but, in addition, on the left of the crowned bust, in place of the debased Pehlevi legend, there is substituted a legend in Arabic. As this legend contains the name of one of the early 'Abbāsid Caliphs, or of one of their governors, it is possible to place the coins in question in some sort of chronological framework. The following scheme is suggested as an approximation only, the reasons for which will be given below when we consider each case individually:

#### Bilingual Coins of Bukhārā

- (a) With name محمد (Muḥammad), A.H. 158-163 (A.D. 775-780)
- (b) With name المهني (al-Mahdī), A.H. 163-166 (A.D. 780-783)
- (c) With legend المهدي الفضل لله (al-Mahdī al-Faḍl lillāh), A.H. 166-169 (A.D. 783-785)
- (d) With legend مهدية الخليفة موسى (Mahdīyat al-<u>Kh</u>alīfa Mūsā), A.H. 169–170 (A.D. 785–786)

[Zambaur's unpublished coin with name جعفر (Ja'far), A.H. 171-173?]

- (e) With legend مهدية الخلفة هرون (Mahdīyat al-<u>Kh</u>alīfa Hārūn), A.H. 170–193 (A.D. 786–809).
- (a) The coins with the name *Muḥammad* are described in the Catalogue on p. 164. Several explanations of this name might be put forward:
- (1) As a pious reference to the Prophet of Islam himself. Allotte de la Fuÿe (op. cit., p. 184) considers that if this were the case these coins might have been issued by the early Bukhār-Khudās, such as Tughshāda and his son Ķutaiba, who were converts to the new Faith. This is most unlikely. The coins of this type are so closely linked in brevity of legend with the al-Mahdī coins, group (b), that they must be almost, if not completely, coeval.
- (2) The fact that the Caliph al-Mahdī's other name was Muḥammad would fit the circumstances very well. This member of the 'Abbāsid

royal house actually had his name al-Mahdī Muḥammad on coins of the conventional Muhammadan type struck during the reign of his father al-Mansūr (A.H. 136-158). As heir-apparent he was appointed to the governorship of the East in A.H. 141. In fact the great city of Raiy was rebuilt by him under the name of al-Muhammadīya, the new name which appears on the regular 'Abbasid coins from A.H. 148 onwards.1 It is therefore not at all improbable that the name on these Bukhārān coins may refer to the Caliph al-Mahdī, either before or after his accession in A.H. 158.

(3) The fact that the long variety of Arabic legend on these Bukhārān coins was in full use under the Caliphs al-Hādī and Hārūn al-Rashīd, as we shall see, makes it most unlikely that the simple legend type Muḥammad can refer to the later Caliph al-Amīn, who was also called Muhammad.

(4) There is a fourth possibility, which has the added support of the

annals, namely, that the name is that of some governor.

Al-Makdisī² in referring to the taxes of this period and region mentions three kinds of dirhams in circulation called, respectively, Muḥammadīya, Musaiyabīya, and Ghiṭrīfīya dirhams. He adds the interesting detail, which is certainly a romantic touch, that Muḥammad, Musaiyab, and Ghiṭrīf were three brothers who were responsible for the coins in question. The two last-named are obviously Musaiyab ibn Zuhair (A.H. 163-166) and Ghitrīf ibn 'Aṭā (appointed A.H. 185), both known governors of Khurāsān and the Transoxine provinces. According to Gardīzī (quoted by Barthold, Turkestan, p. 205) the first-named was Muḥammad ibn Dahda. As his name is not included amongst the known governors, he was probably a subordinate official in Bukhārā. Whether the coins with the name Muhammad bore his name, or that of the Caliph al-Mahdī, we are apparently not far wrong in regarding them as the Muḥammadīya dirhams (دراهم محمدية) of the historians, and their place in the above chronological framework seems justified.

(b) This group certainly bears the name of the third 'Abbāsid Caliph al-Mahdī (158-169). There are two varieties of these coins: (i) with three pellets on the bust; and (ii) a rare variety with the Arabic exclamation خ خ 'Bravo!' on the bust. These particular coins I consider to be the Musaiyabīya dirhams (دراهم مسينية) of the annalists, which were struck by the governor Musaiyab ibn Zuhair, who successfully

¹ See Miles, The Numismatic History of Rayy, p. 31.

² De Goeje, Bibliotheca Geographorum Arabicorum, iii, pp. 339-40.

quelled the rebellion of the 'Veiled Prophet' and his ally the Bukhār Khudā Baniyāt. He was in control in the years а.н. 163–166.

- (c) The Arabic on the coins of this group contains two names: (i) that of the Caliph al-Mahdī; and (ii) that of a governor named al-Faḍl. The phrase used al-Faḍl lillāh may be translated 'How excellent is al-Faḍl!'. A parallel to this usage has been noted on the Arab-Sassanian coins of the Umaiyad governor Ṭalḥa ibn 'Abdallāh (see p. 95). There are two governors of Khurāsān and its dependencies at this time of the name of al-Faḍl. (i) al-Faḍl ibn Sulaimān (A.H. 166–171) and (ii) al-Faḍl ibn Yaḥyā al-Barmakī (A.H. 177–179). The former is almost certainly the one recorded on the coins since, firstly, he succeeded Musaiyab, who was no doubt responsible for the coins of the preceding group (b), and, secondly, he was governing in the reign of al-Mahdī, whose name precedes his, whereas the other al-Faḍl did not function until later under the Caliph Hārūn. The reason why I have dated these coins between the years 166–169 is because a new type of coin (Group d) can be dated with certainty to the years 169–170.
- (d) This new group is due to my good fortune in coming across a unique and hitherto unpublished specimen in the Istanbul Museum with the legend Mahdīyat-al-Khalīfa Mūsā, i.e. 'Mahdīya of the Caliph Mūsā'. Mūsā was the other name of the Caliph al-Hādī, the son and successor of al-Mahdī and the brother of Hārūn al-Rashīd. His brief reign (A.H. 169–170) provides a most useful fixed date in the chronology of these Bukhārān coins. The word Mahdīya is obviously a coin denomination, having reference to the preceding coins with the name of al-Mahdī struck during his Caliphate. The feminine form of the name presupposes some word like sikka (الله in money' or fidda (الله in money')

'silver' understood, rather than dirham which is masculine.

Another unique Bukhārān coin, which no doubt ought to be included at this point in the chronology, is an unpublished specimen with the name Ja'far (جعفر) across the bust, which has been briefly mentioned by Zambaur, but neither illustrated nor described, in his review of Col. Allotte de la Fuÿe's article. The coin is in Zambaur's own collection at present housed in the Vienna Museum. It is to be hoped that it will be reproduced some day soon for the benefit of students. The name Ja'far may probably be that of the governor Ja'far ibn al-Ash'ath who ruled in the years A.H. 171–173, though it might also be that of Ja'far ibn Yaḥyā al-Barmakī, the favourite of the Caliph Hārūn al-Rashīd.

¹ Num. Zeit., 1928, p. 127.

Perhaps when the coin itself is published, however, it may be easier to decide.

(e) The Arabic legend on the coins of this group is similar to that on the preceding group (d) except that Hārūn's name has been substituted for that of Mūsā. A 'Mahdīya of the Caliph Hārūn' obviously falls within the years A.H. 170-193. If we regard these particular coins as being the <u>Gh</u>iṭrīfīya dirhams (دراهم غطريفية), which we have already mentioned, we might even date their first issue more precisely. Ghitrif ibn 'Atā was governor of Khurāsān and its dependent territories in the years A.H. 174-176. If this group of coins was struck at this date they might naturally follow the coinage with the name of Ja'far referred to by Zambaur, which I have suggested above might have been issued about A.H. 171-173. On the other hand, according to Narshakhī (p. 34) Ghitrīf's manipulation of the coinage, which we shall consider later, was in the year A.H. 185. Moreover, the coins of this group in the Museum Collection are far from betraying any considerable baseness in their metallic composition such as would warrant their being considered as Ghitrīfīya dirhams. So far, however, no coins with the name of Ghitrif have come to light to settle the difficulty. Perhaps his name was never put on the coinage. Barthold (op. cit., p. 207) is quite wrong in stating that, in his view, 'the words of Narshakhī and Sam'ānī (in spite of Prof. N. Veselovsky's opinion) do not allow of any doubt that the names of the three viceroys [i.e. Muhammad ibn Dahda, Musaiyab ibn Zuhair, and Ghiṭrīf ibn 'Aṭā] were engraved on coins, perhaps not in Arabic, but in Aramaic characters'. It was by no means a sine qua non that these governors' names should be placed on their coins, though it is always a possibility. We have, in fact, already noted two or three cases where they do occur. But that their names should be written in Aramaic (or Bukhārān) script is highly unlikely. As we have already mentioned the Aramaic legend on all these coins varies but little. The only real variant legend is simply an expansion of the Bukhār-Khudā title.

In concluding this outline of the Bilingual Coins of Bukhārā it should be noted that the 6^{me} Classe, Légende arabe مهدية الخليفة, of Allotte de la Fuÿe (op. cit., p. 171) is due to a misreading of the legend on a coin in the Stroganoff Collection illustrated by Tiesenhausen (Notice, p. 11, Pl. I. 6). The latter also misread the legend. An examination of the plate clearly shows that the correct reading is مهدية الخليفة هرون and the coin in question is but another specimen of the above group (e).

#### B. With Arabic Legends only

On coins of this class all trace of Bukhārān script has completely disappeared. Obviously they are later in date than the preceding coins. Internal evidence confirms this as we shall see. So far two Arabic legends only are known on the coins of this class:

- بسم الله محمد رسول الله محمدية مما امر به الامين على سليمن لله (i)
- بسم الله محمد رسول الله الخاقان الأعظم امين (?) امير المؤمنين (ii)
- (i) The interpretation of this legend presents several difficulties in the last four words only, the rest is beyond question. It goes: 'In the name of Allah; Muhammad is the Apostle of Allah; A Muhammadīya ordered by . . . .'. The first word that follows might be one of two things: al-Amīr, 'the Governor', or al-Amīn, a proper name. Markoff (Registre, p. 13) and Allotte de la Fuÿe (op. cit., p. 173), without considering the alternative, chose the former interpretation, no doubt influenced by the proper names that follow. But it seems to me on epigraphic grounds that this is inadmissible. The last letter of the word cannot be an r, since it does not resemble the Kufic r which occurs already in two words in the same legend, namely المر and المر. On the other hand, it most certainly agrees in shape with the last letter of Sulaiman سلمن. My conclusion is that the word must be read as al-Amīn. If so, then these coins were struck some time in the Caliphate of al-Amīn, A.H. 193-198. The coin denomination Muhammadiya we have already come across applied to the early 'Abbasid Bukhārān coins with the name Muḥammad. The present instance may be an extension of this usage, or else a reference to the Caliph al-Amīn himself, whose other name was Muhammad. The next two words that present difficulty can be read most naturally as 'Alī and Sulaimān. Markoff and Allotte de la Fuÿe read them both as the name of a particular governor. Markoff 1 wondered, however, whether the Arabic word ibn (ن) between the two might not be concealed in the ornamentation. But there is no trace at all of this. Another possibility على يدى سلمن stands for على سليمن that might present itself is that 'by the agency of Sulaiman', an oft recurring phrase in Arabic numismatic legends, especially after a preceding . This suggestion, however, I do not wish to stress. In fact I think the last word all lillāh is against this interpretation. It obviously tags on at the end of 1 Registre, p. 22.

the legend, although Thomas ( $Indian\ Antiquary$ , ii, p. 118, and Num. Chron., 1881, p. 128) thought fit to put it at the beginning. ' $Al\bar{\imath}$   $Sulaim\bar{a}n\ lill\bar{a}h$  seems to me to be analogous to  $al\text{-}Fadl\ lill\bar{a}h$  on the coins of Group (c) above. In consequence my translation of the whole legend is as follows:

'In the name of Allah: Muḥammad is the Apostle of Allah. (This is) a Muḥammadīya which al-Amīn ordered. Well done, 'Alī (and) Sulaimān!' As it is most unlikely that a Muḥammadan would have such a double name as 'Alī Sulaimān at this early date, it seems natural to consider two governors as being intended. The absence of a conjunction between the names is not without parallel.

Can these Bukhārān coins, then, have been struck on behalf of the Caliph al-Amīn? Let us glance at the historical situation. Al-Amīn was so called by his father Hārūn al-Rashīd in the year 173 (or 175) when he appointed him heir-apparent (ولي عهد). A few years later his brother 'Abdallāh, who was al-Amīn's senior by a few months, but the son of a Persian (?) slave-girl, was designated successor to the heirapparent (ولى ولى عهد) and called al-Ma'mūn. In 186 the lands of the Caliphate were apportioned amongst Hārūn's sons as follows: 'Irāk, Syria, Egypt, and Africa went to al-Amīn; Khurāsān and the Eastern Provinces, between Hamadhan and the Indus, formed Ma'mun's share; while the lands toward the Byzantine frontiers were allotted to a third son, al-Kāsim. Deep-rooted rivalry existed between Amīn and Ma'mūn, which came to a head with the death of their father in A.H. 193. Two years later Amin deposed his brother and sent a large army under the famous general 'Alī ibn 'Īsā to subdue the Eastern Provinces. The dramatic defeat and death of the latter near Raiy marked the beginning of Amīn's downfall. Ma'mūn owed his success to his commander Tāhir, the founder of the later dynasty of the Tāhirids.

If the above-mentioned coins were issued in Amīn's name as the legends seem to testify, they are the only coins of Bukhārā with his name. The regular 'Abbāsid dirhams of conventional Muḥammadan type begin in A.H. 193. The copper ones are earlier. One of this date has no Caliph's name and might therefore have been issued under Hārūn.¹ We have coins of Bukhārā with Ma'mūn's name on them as heir-apparent between the years A.H. 193–196. But from 195 onwards the coins of Bukhārā bear Ma'mūn's name and title as *Imām* or *Amīr al-Mu'minīn*.

¹ Lane Poole, B.M.C., vol. i, p. 69, no. 167. The year 103 for a Bukhārān coin given by Tiesenhausen (Notice sur la Collection Stroganoff, p. 11) is a mistake for 193, as pointed out by Markoff (Registre, p. 18, note 2).

The coins of Bukhārān type therefore, with Amīn's name, may have been a short-lived emergency issue about A.H. 193-195, if the above interpretation be true.

(ii) The only uncertain word in this legend is the third from the end, which has received various interpretations. In 1819 Fraehn (Novae Symbolae, pp. 45-6, Pl. II, no. 14) published the first known specimen of a coin (in the Nejelow Collection, Kazan) with this unusual legend. He proposed to read the doubtful word as خمال (or خما) 'sincere friend'. Markoff (Registre, p. 15, note 6) regarded this interpretation as very plausible. Another, but even poorer, specimen in the Asiatic Museum at St. Petersburg, which he referred to in his book Die Münzen der Chane von Ulus Dschutschis, &c., p. 53, left the problem just as obscure. Soret, in his Lettre à M. François Duval (p. 13), mentioned a new variety of this coin which, he believed, completed the legend on the Nejelow specimen. He stated that he distinctly read the word امن Amīn, i.e. 'fidèle, curateur, affidé'. The phrase امن would thus mean 'Confidant of the Commander of the Faithful'. However, Soret does not illustrate his specimen, so that the doubtful word still remains uncertain. The title preceding this phrase, however, is decipherable. It is الحاقان الأعظم al-Khākān al-A'zam, i.e. 'The Mightiest Khākān'. This name is a transcription into Arabic of the well-known Turkish regal title Kaghan, which, according to Barthold,1 was already borne by the rulers of the earliest people who called themselves 'Turks' (sixth century A.D.). We find the title 'The Mightiest Khākān 'appearing at a later date on coins of the Tīmūrids, Shaibānids, Mongols of Persia, &c. This fact has led those who have written about the present coin to attribute it to a late date, and the Sāmānid period has been chosen as the most likely. With this I cannot agree. The coin, it seems to me, in spite of its legend, has a close resemblance in style and fabric to the preceding coins of the 'Abbasid governors of Bukhārā—and it is most unlikely that any great interval of time elapsed between them. If, then, this coin was not struck during the Caliphate of Amin (A.H. 193-198), at least it was probably issued under his successor Ma'mūn (198-218). About this period in the Transoxine provinces various nomadic tribes of Turkish ancestry were in evidence in the midst of the political disturbances. For the most part these tribesmen sided with the various rebels who arose in those troublous times. Amongst the heterogeneous tribal chieftains in the lands across

¹ Encyclopaedia of Islam, article Khākān.

the Oxus of whom we read in the annals of the period are the Ikhshīd of Sughd, the Afshīn of Ushrūsana, the Jabghū of the Karluks, and the Khākān of the Tughuz-Ghuz (or Tokuz-Oghuz). It is therefore not surprising in the circumstances that the presence of these Turkish hordes should be reflected in the local coinage in the form of an outstanding Turkish title such as 'The Mightiest Khākān'. Who was the particular person, however, who was so designated on this coin issue? We can but guess. My own conjecture is that this particular coinage was issued under Ma'mūn. Perhaps permission was granted to 'The Mightiest Khākān' to do so, as a measure of appeasement at a time when Ma'mūn's attention was occupied by the quarrel with his brother Amīn (c. A.H. 195). Whoever he was, he must have been a vassal of the 'Abbāsid Caliph, since their titles are associated in the legend. The nearest we can get at present to any certainty, is the following interpretation of the Arabic legend:

'In the name of Allah, Muḥammad is the Apostle of Allah; The Mightiest Khākān, trusted one (?) of the Commander of the Faithful.'

## V. Isolated Coins of Arab-Sassanian Type

The coins in this group have one feature in common; they are all enigmatic. Little need be added to what has already been pointed out concerning each in the course of the Notes (pp. 216-17).

The remarkable coin of Tabaristan type, however, which was issued at the mint of al-Raiy and dated 168 (Catalogue, p. 174) merits some attention. The reverse legend, which is in Arabic, is beyond dispute. Dorn (Mélanges, iv, p. 22 f. = Mordtmann, Z.D.M.G., 1865, p. 475, no. 188) read this correctly-apart from some doubt regarding the mint-name—on a specimen in St. Petersburg. But he interpreted the puzzling obverse name-legend as 'Umar written in Pehlevi (AUMR). Stickel (Handbuch, ii, p. 107), following Dorn and Mordtmann, attributed it to 'Umar ibn al-'Alā, governor of Ṭabaristān (see above, p. lxxvi). Valentine (p. 105) did likewise. This is certainly wrong. Ghalib Edhem in his Catalogue (nos. 46 and 47) read the name as Arabic, Asad (ibn Yazīd) اسد بن يزيد. Asad ibn Yazīd ibn Mazyad was governor of Mosul in A.H. 184 and of Armenia in A.H. 185, but there is no record in the annalists of his having any connexion with al-Raiy, although coins of the regular Muḥammadan series are known which were struck at Muḥammadīya (i.e. al-Raiy) in 181 and 182 bearing a name which

may be read as Asad.¹ But epigraphically Ghalib Edhem's interpretation of the name-legend is not very convincing. It is tempting to read in the legend the name of Sa'd (سعد), a maulā of the Caliph al-Mahdī, who was actually in control of al-Raiy in A.H. 166, which is only two years earlier than the date on the coin.2 This involves, however, regarding the first stroke (which is very slightly bent) as a crescent and embodying it with the small star to the right of the crown as the usual star and crescent. But this rendering is likewise open to objection on epigraphic grounds. In fact, the circle in the middle of the legend is not attached to the base line of the legend and appears to have no linguistic significance, and the final letter of the name is more like a Pehlevi than a Kufic character, so that if we take the legend as Pehlevi it makes an exact transcription (NSIR) of the Arabic proper name Nusair (نصر). This is the interpretation suggested by Markoff and adopted by Unvala.3 But even so there is no record, so far as I am aware, of a governor of this name associated with al-Raiy at such a time, i.e. if we accept 168 as a Hijra date, as is most natural since it is written in Arabic. There is, however, a Nusair whose name appears in the year A.H. 168 on the coins of Mosul, 4 although his name does not figure amongst the governors of that place as given by Zambaur.⁵ There may be some connexion. This may be the Nuşair who on the death of the Caliph al-Mahdī (in A.H. 169) was wisely sent to Jurjān by Hārūn al-Rashīd to carry the imperial seal and sceptre to his brother, the newly appointed Caliph al-Hādī.6

Why the particular type of coinage favoured in Tabaristān should have been imitated by a governor of al-Raiy can only be surmised; that there was a close bond between the adjacent provinces of Tabaristān and Jibāl in which al-Raiy was situated can be readily imagined. Unvala's opinion (p. 22, note) that this unique coin 'indiquerait la prétention de ce gouverneur sur la partie montagneuse du Tabaristān' is without justification.

It is interesting to find the mint-name al-Raiy revived in A.H. 168, when on the regular coins of the 'Abbāsids its new name of al-Muḥammadīya—in honour of the reigning Caliph Muḥammad al-Mahdī—had been used since A.H. 148.7

#### III. MINT NOTES

On most of the Arab-Sassanian coins described in this Catalogue the place of minting is indicated. With three exceptions—so far known—the mint, when expressed, is in Pehlevi, either in full or in an abbreviated form. The three exceptions may be noted first of all. They have the mint-name written in Arabic in Kufic script. They are as follows:

- (a) Coins of Khusrau II type (see p. 23 of Catalogue) with the mint-name Dimishk (دهشت), i.e. Damascus, which was the Syrian capital of the Umaiyad Caliphs. These coins, which were struck in the years A.H. 73 and 74, were no doubt purely experimental forerunners of the Reformed Coinage of the Caliph 'Abd al-Malik, which about this time came into circulation and ousted the Arab-Sassanian type in due course. It is not surprising in the circumstances that the attempt should have been made in the Umaiyad capital. In fact, we actually have coins of the Damascus mint with the new Reformed Coinage type and legends dated in the succeeding year A.H. 75.1
- (b) A coin (Catalogue, no. 245) of barbarous type, hitherto unpublished, on which there appears to be on the obverse margin in Arabic ضرب بزرنج 'minted in Zaranj'. Zaranj was the capital of the province of Sīstān, and its Pehlevi mint-signature (zr, no. 57) is fairly common on the regular Arab-Sassanian coins (see below, p. cxxxi).
- (c) Coins of Tabaristān type (Catalogue, p. 174) struck at the mint of al-Raiy (الرى), which is also a frequently occurring mint-name in its Pehlevi form RD (no. 48) on the regular Arab-Sassanian coins issued there in the Umaiyad period (see below, p. cxxvi).

As has been said, however, most of the mint-names on Arab-Sassanian coins are written in Pehlevi, sometimes in full, but more usually in the form of a mint-signature consisting of one or more—usually the initial—letters of the mint-name. Not all of these can be identified with absolute certainty. Indeed the interpretation of the mint-signatures on Sassanian and Arab-Sassanian coins—for the two are naturally related—has long been a thorny problem. The difficulty is largely due to the deficiency and ambiguity of the Pehlevi script, as can be seen from a glance at the table on p. cliii. A useful guide in any

¹ Lavoix, Catalogue des Monnaies Musulmanes, i, p. 64, no. 184.

attempt at deciphering these mint-legends, however, is provided by our knowledge of the names of the mint-towns occurring on the Umaivad coins of the Reformed Currency, which are written in Arabic. As the Muhammadans altered little of the administrative system of the old Sassanian régime it is natural to suppose that, in the majority of cases at least, the mints were maintained by them as formerly before their invasion of the country. That this was so can be demonstrated in many instances, as can be seen from the list on p. cxl f., below. But unfortunately not all the Arabic mint-names on Umaiyad coins of the Reformed Currency can be equated with corresponding Pehlevi mintsignatures on Umaivad coins of the earlier Arab-Sassanian types, and vice versa. In some cases it is possible to conjecture, but until further enlightenment is forthcoming by the discovery of fresh numismatic or archaeological data we must be content to leave the matter in several cases in a state of uncertainty. Recently some new material, of the type that may conceivably settle the dubious cases once and for all, has been published by Prof. Ernst Herzfeld in the shape of Sassanian bullae collected by him in 'Irāk and Īrān.1 Still more from recent finds await publication. These bullae are pieces of fine clay stamped with seal impressions, with designs and/or names. The ones that concern us particularly are the official seals bearing the names of important towns and provincial centres of administration, since such places were also very often mint-towns. The important fact that emerges from an examination of these Sassanian bullae is that the place-name is sometimes written in the centre of the seal in an abbreviated form, but is repeated round the margin in its full form. This provides us with a definite key to certain of the mint-signatures on the coins. For example, BISH on the coins (mint-signature no. 12) is clearly indicated as BISHĀPŪR on the seals; while ART on the coins (mint-signature no. 9) is established as ARDASHĪR-KHURRA on the seals. It is to be hoped that more evidence of this nature will soon be forthcoming.

Until this happens we must utilize the data of the coins and the statements of the early historians and geographers ² in determining the location of the various mints. Such a close and exhaustive study is still a *desideratum*. In the following mint notes, although several of the identifications of Pehlevi mint-signatures are quite certain, some are very questionable, while some are, I fear—in the present state of

¹ Reference should be made to his article in the Transactions of the International Numismatic Congress, London, 1938, pp. 416-26.

² An important source utilized by the Arab geographers was the Pehlevi treatise  $\underline{Shahrh\bar{a}} \ \bar{e} \ \bar{E}r\bar{a}n$ , 'the Lands of  $\bar{I}r\bar{a}n$ ', as Herzfeld has mentioned (op. cit., p. 424).

our knowledge—quite beyond solution. For this reason I have refused on most occasions to mention the host of conjectural equivalents given by previous writers on the subject, particularly those of De Morgan (in Rev. Num., 1913), which are almost entirely fanciful and in many cases impossible. Nevertheless, I have ventured myself occasionally to interpret in a new way certain doubtful mint-signatures (particularly nos. 8, 15, 23, 25, and 63) as well as to emend, in two notable instances, the long-established interpretation held by my predecessors of mint-signatures nos. 14 and 52. In these last, at least, I am convinced that I have been successful in the elucidation. All other suggestions are offered with the utmost reserve. In consequence the large number of queries in the Table on pp. cii—cv is not excessive in the circumstances.

#### Pehlevi Mint-Names and Signatures

In the following notes the Pehlevi mint-signatures are referred to by the numbers in the Table:

Also known as  $N\bar{\imath}\underline{shappir}$  ( $\underline{\iota}\underline{u}$ )  $Nais\bar{a}b\bar{u}r$ , or  $N\bar{\imath}s\bar{a}b\bar{u}r$ ), Abrashahr was the capital of one of the four quarters of the great  $\bar{I}r\bar{a}$ nian province of  $\underline{Kh}$ ur $\bar{a}s\bar{a}n$ . Its possession of a mint in Sassanian times is vouched for by the occurrence of its mint-signature (no. 1) on coins from Kob $\bar{a}dh$  I (A.D. 488-531) until the time of Ardash $\bar{i}r$  III (A.D. 628-630). Under the Arabs its minting activities were continued, as the following numismatic data on the Arab-Sassanian coins of the Umaiyads testify:

- 2. APRSH, Ziyād ibn Abī Sufyān, year 54 (A.H.)
- 1. APR, 'Ubaidallāh ibn Ziyād, year 60 (A.H.)
- 3. APRSHT:, Salm ibn Ziyād, years 63, 64 (A.H.)
- 3. APRSHT:, 'Abdallāh ibn Khāzim, years 65, 67, 68 (A.H.).
- 3 a. ,, , year 69 (A.H.).

The earliest occurrence, so far known, of its Arabic name on the Reformed Coinage of conventional Muḥammadan type is A.H. 92.¹

The place was captured by the forces of 'Abdallāh ibn 'Āmir (q.v.) in A.H. 30, when he was governor of Baṣra, but a few years later the Muhammadans were driven out for a short time. On its recapture

during Mu'āwiya's reign, 'Abdallāh ibn 'Āmir, reinstated as governor of Baṣra, appointed Kais ibn al-Haitham al-Sulamī as his lieutenant in command of the place in A.H. 42. After Ziyād ibn Abī Sufyān had been appointed governor of Baṣra (in A.H. 45) he made Khulaid ibn 'Abdallāh al-Ḥanafī governor of Abraṣhahr (in A.H. 50). Ziyād was succeeded in turn as governor of Baṣra and its dependent provinces by his sons 'Ubaidallāh and Salm, a fact which is substantiated by the coins mentioned above. In A.H. 64 the Umaiyad governor Salm was driven out by the Zubairid governor 'Abdallāh ibn Khāzim who controlled the province of Khurāsān until his defeat and death in A.H. 72. The coins also corroborate this succession of governors.

Although other interpretations of the above mint-signatures have been proposed the one given here (first suggested by Mordtmann, Z.D.M.G., 1879, p. 124, no. 39) is the most probable. As has been demonstrated above, the numismatic and historic data support it. The above coins are obviously all dated in terms of the Hijra era.

#### 4, 4a. AHM, $Hamadh\bar{a}n$ (همذان)

The capital of one of the four divisions of the Jibāl Province, the ancient Media, Hamadhān was called under the Sassanians Ahmaðān,¹ the Ecbatana of classical writers. The Muḥammadan control of the city may be dated soon after the Battle of Nihāvand in A.H. 21, which was fought on the plain to the south-west. Examples of Arab-Sassanian coins from the Hamadhān mint are rare. The only ones known to me are:

 $\underline{\mathrm{Kh}}$ usrau II type, years 26 and 31 (the latter date on the authority of Mordtmann only)

Ziyād ibn Abī Sufyān, year 52 (A.H.).

The first two are no doubt dated in terms of the Yezdigird era (=A.H. 37 and 42), the last in terms of the Hijra era. Ziyād was Governor of Kūfa, as well as Baṣra, between the years A.H. 49 and 53, and in consequence the Jibāl Province was under his jurisdiction. The Hamadhān mint also later on issued coins of purely Muḥammadan type, the earliest dated specimen being A.H. 90.2

¹ The Pehlevi name in full (AHMTAN) on a Sassanian clay seal has recently been published by Prof. Herzfeld in the *Transactions of the International Numismatic Congress*, London, 1938, p. 421, fig. 20.

² Lavoix, Catalogue, i, no. 360, p. 95.

Various interpretations of the above mint-signatures have been proposed, including the most natural one of identifying them with the name of the country Ērān (modern Īrān). I have preferred, however, to accept Prof. Herzfeld's opinion 1 and regard it as the old town of Sūsa (in Arabie al-Sūs), the Biblical Shushan, under its official name Ērān-Xurrah-Šāhpuhr. Al-Sūs, at one time the capital of what became the province of Khūzistān, is known to us as an Umaiyad mint on the coins of purely Muḥammadan type as early as the year A.H. 80.2 As we have no coins of Arab-Sassanian type with the Pehlevi name of Sūsa (SHŪSH) 3—apart from the rare undated copper piece described below (p. 171)—it is natural to suppose that such an important mint must be concealed amongst the Pehlevi mint-signatures somewhere. The above group is a reasonable possibility.

The Arab-Sassanian coins with the above mint-signatures are known for the following dates:

- 5. AIR, <u>Kh</u>usrau II type, years 25, 37 AIR, 'Ubaidallāh ibn Ziyād, years 29 and 59 (according to Mordtmann)
- 6. AIRA, 'Ubaidallāh ibn Ziyād, year 56 (according to Mordtmann)
- 7. AIRAN, 'Ubaidallāh ibn Ziyād, years 30, 31, 32, 60, and 61.

As 'Ubaidallāh was not appointed governor of Baṣra and its dependencies, in succession to his father, until A.H. 55, it is obvious that some of the above coins must be dated in an era other than the Hijra one. As for the coins with the name of Khusrau II they can obviously be dated either according to the Yezdigird era (which would make them A.H. 36 and 48) or according to the Hijra era, since al-Sūs was captured by the Muslims as early as A.H. 17. The coins with the mintname AIRAN, dated 30-32, must be equated in terms of the Post-Yezdigird era, i.e. A.H. 62-64.

## 8. ARJN, Arrajān (أرجان)

The above is an interpretation which I offer for the first time. The mint-name occurs on the coins of two governors only, namely, 'Abd

¹ Trans. Inter. Num. Congress, p. 425. See also his recent article in Archaeologische Mitteilungen aus Iran, ix (1938), p. 149. Streck also, in the Encyclopaedia of Islam, article al-Sūs, suggested that the abbreviation אראן on the Sassanian coins of Susiana might stand for Sūsa.

2 B.M.Cat., Add. ix. 34. 135.

³ The name SHUSH is not found on any Sassanian coins.

al-Raḥmān ibn Ziyād, year 54 (A.H.) and al-Ḥakam ibn Abi'l-'Āṣ, year 56 (A.H.).

I have endeavoured to show, under the mint-signature no. 15 below, that these two governors had other mints in common, one of which I have proposed to identify with Birāmkobādh (نِعْقَادُ), which, I consider, occurs on Umaiyad coins of the Reformed Currency. Ṭabarī has told us that this was another name for the town of Arrajān which, if written in Pehlevi, might quite well be represented as the above. Arrajān was the capital of the district of the same name in the province of Fārs. If the interpretations proposed are correct, the occurrence of both Arrajān and Birāmkobādh on Arab-Sassanian coins is paralleled by that of Sīstān and Zaranj (nos. 51, 52, and 57).

## 9, 9a. ART, Arda<u>sh</u>īr-<u>Kh</u>urra (أردشير خُرَة

Various interpretations of this commonly occurring mint-signature have been propounded. It must obviously represent a place of considerable importance. The identification of Professor Herzfeld, as given above, seems to me the most satisfactory. Ardashīr-Khurra was the chief of the five districts of the province of Fārs, the Persis of the Greeks. The first conquest of the district by the Arabs dates from about the year A.H. 23, but the province was reconquered some seven years later, though various other insurrections disturbed its peace for years afterwards. That the place was an Umaiyad mint is vouched for by Muḥammadan coins of conventional Arabic type dated as early as A.H. 80.2 The coins of Arab-Sassanian type with this mint-signature are dated as late as A.H. 78. The Pehlevi abbreviation ART occurs on these coins as follows:

Khusrau II type, years 27, 29, and 39 (the last two on Mordtmann's authority)

'Abd al-Malik ibn Marwān, year 73 (A.H.)

'Abdallāh ibn al-Zubair, years 65, 66, 67 (A.H.)

'Abdallāh ibn 'Āmir, year 47 (A.H.)

Salm ibn Ziyād, year 26 (P.-Y.E.) = A.H. 58

'Umar ibn 'Ubaidallāh, years 68, 69, and 70 (A.H.)

Ḥumrān ibn Abān, year 72 (A.H.)

Katarī ibn al-Fujā'a, year 75 (A.H.)

Muhallab ibn Abī Şufra, year 76 (A.H.)

¹ Trans. Inter. Num. Congress, p. 425.

² H. Porter, 'Unpublished Coins of the Caliphate', in *Num. Chron.*, 1921, p. 317. I have since seen the actual coin, which is in the American University Collection, Beirut.

Hajjāj ibn Yūsuf, years 77?, 78, and 79? (A.H.) Uncertain governor, years 69? and 75? (A.H.)

'Abd al-Raḥmān (ibn 'Abdallāh ?), year 73 (A.H.). [See M. 54, p. 123.]

Most of these dates are obviously according to the Hijra reckoning. How closely they agree with already known historical data concerning the Caliphs and governors in question will be seen by a reference in each case to the Biographical Sketches given above (pp. xxxv f.). See also mint-signature no. 54.

# 10, 10 a, 10 b. ATRA, Adharbaijān (أُذربيجان)?

This is the identification proposed by Mordtmann (Z.D.M.G., 1879, p. 125, no. 47, and p. 133, no. 102). If it is correct, it is not surprising that its mint-signature occurs so seldom on these Arab-Sassanian coins, since this distant mountainous province in the north-west of Īrān, first conquered about A.H. 28, was of little importance under the Umaiyads. We know definitely, however, that during their régime Adharbaijān was a mint-city, since we possess coins of the Reformed Currency dated A.H. 105, on which the name is found.

The following are the Arab-Sassanian coins bearing the above mint-signature:

'Ubaidallāh ibn Ziyād, years 62 and 63 (A.H.)

'Abd al-Raḥmān ibn 'Abdallāh (an uncertain governor) has perhaps the same signature, but the date is questionable.

'Ubaidallāh's coins are obviously dated according to the Hijra reckoning since he was driven out of Baṣra in A.H. 64.

## 11, 11a. BH? Bihkubādh (بهقاذ)?

In the province of 'Irāķ there were three districts of this name: (a) Upper (الأُوسَط al-A'lā), (b) Middle (الأُوسَط al-Awsaṭ), and (c) Lower (الأُسْفَل al-Asfal) Bihķubādh. On the Umaiyad coins of the Reformed Currency examples are known of the two last mint-names and dated A.H. 90.² In all probability this mint-signature should be identified with one or other of these districts.

1 Tiesenhausen, Monnaies des Khalifes Orientaux, Pl. II. 13.

² Bihkubādh al-Asfal appears on a coin in the Bibliothèque Nationale, Paris (Lavoix, no. 247) as well as on one in the former Khedivial Library, Cairo (Lane-Poole's Catalogue, no. 84); while Bihkubādh al-Awsat is known to me from a coin, of which a cast was kindly sent me by the late Mr. Howland Wood, in the American Numismatic Society Collection, New York. The latter is, so far as I am aware, unpublished.

On the Arab-Sassanian coins we have the following occurrences:

Khusrau II type, year 35

'Ubaidallāh ibn Ziyād, years 60 and 61 (A.H.).

The first date may be either according to the Hijra or the Yezdigird era, more probably the latter; the other two dates are certainly in terms of the Hijra reckoning, since 'Ubaidallāh was made governor of Kūfa and its dependencies in the year A.H. 60.

## 12, 12a, 12b, 12c. BISH, Bishāpūr or Sābūr (سابور)

This mint-signature is one of those whose interpretation has been placed beyond all doubt by the discovery of Sassanian bullae with the name written both in an abbreviated and in a complete form. Mordtmann had previously, however, suggested this interpretation (Z.D.M.G., 1879, p. 121). Bishāpūr was the capital of one of the five districts (or kūras) of the province of Fārs. Under its later Arabic name Sābūr (where it appears as a mint-town on the Umaiyad dirhams of the Reformed Currency as early as A.H. 80.2

On the Arab-Sassanian coins it is one of the commonest of mint-signatures as can be seen from the following occurrences:

Khusrau II type, years 25, 26, 38?, 39?, 41?, 42?, 45, 47, 48, 49, 50

Ziyād ibn Abī Sufyān, years 25?, 47?, 50, 51, 52, 53, 54 (A.H.)

'Abdallāh ibn 'Āmir, year 44 (A.H.)

'Abdallāh, years 42?, 44 (A.H.)

'Ubaidallāh ibn Ziyād, years 51(= A.H. 63), 53(= A.H. 65)

'Abd al-Malik ibn 'Abdallāh, year 66 (A.H.)

'Umar ibn 'Ubaidallāh, years 67, 68, 69, 70 (A.H.)

Mukātil ibn Misma', years 71, 72 (A.H.)

Khālid ibn 'Abdallāh, years 71, 73?, 74 (A.H.)

Katari ibn al-Fujā'a, years 69, 75 (A.H.)

Muhallab ibn Abī Şufra, years 75, 76 (A.H.)

'Abd al-Raḥmān ibn Muḥammad, year 82 (A.H.)

Hajjāj ibn Yūsuf, years 76, 77, 78, 79, 80?, 81, 83 (A.H.).

Most of the above dates are expressed in Hijra years. The coins of 'Abdallāh (ibn 'Āmir) dated 44 must have been struck during the last year of his term of office as governor of Baṣra and its dependent provinces. As for the coins of 'Ubaidallāh ibn Ziyād, they are most probably dated in the Yezdigird era (i.e. A.H. 63 and 65) since he was

¹ See Herzfeld, Trans. Inter. Num. Congress, p. 418, fig. 6.

² P. Casanova, Inventaire Sommaire de la Collection des Monnaies musulmanes de S. A. la Princesse Ismail, Paris, 1896. I have seen the coin in question in the Arab Museum, Cairo. Lavoix (Catalogue, i, no. 195) has mention of one dated A.H. 82.

not governor of Baṣra until A.H. 55, and his appointment to the dual command of Kūfa and Baṣra was not until A.H. 60, and he was killed in A.H. 67. The coins of the other governors follow in a natural sequence if Hijra dates. The coins of Ķaṭarī, the heretical rebel Caliph, and those of his conqueror Muhallab, are significantly dated. So also are those of 'Abd al-Raḥmān and Ḥajjāj. It was in the neighbourhood of Biṣhāpūr that the campaign between them was waged for a time. It is of some interest also to note that the old Arab-Sassanian type of coin continued to be struck at this mint under Ḥajjāj and 'Abd al-Raḥmān ibn Muḥammad contemporaneously with the new type of Reformed Currency without effigies and with Arabic legends only. (See list, p. cxl, under Sābūr.)

## 13. BJRA, al-Baṣra (الصرة)

The interpretation of this mint-name is beyond any doubt. Başra, one of the two great garrison-cities founded by the Arab conquerors in 'Irāk, whose governors were to dominate the Eastern Provinces of the new Caliphate, was built about A.H. 16 (A.D. 637). In consequence its name occurs for the first time on Arab-Sassanian coins. The occurrences are as follows:

Ziyād ibn Abī Sufyān, years 51 or 53, 55 (a.H.)
'Ubaidallāh ibn Ziyād, years 51, 52, 56, 57, 58, 59, 60, 61, 62, 63, 64
Muş'ab ibn al-Zubair, year 66? (a.H.)

<u>Kh</u>ālid ibn 'Abdallāh, year 75 (a.H.)
'Umar ibn 'Ubaidallāh?, year 65? (a.H.).

All the above were governors of Baṣra. Ziyād's coin dated 55 is perhaps a posthumous issue (see p. xliii f.). As Ziyād was still alive and governor of Baṣra in A.H. 53 it follows that the early coins of his son 'Ubaidallāh struck at the Baṣra mint must be dated in the Yezdigird era (i.e. 51 and 52 = A.H. 63 and 64. Cf. analogous case of Biṣhāpūr above). The other dates are all obviously in the Hijra era. Khālid was deposed in A.H. 75, while Muṣ'ab was appointed about A.H. 66 or 67. The existence of the coin of 'Umar is very problematic, but would agree with historic facts.

With the exception of an erratic coin of conventional Muḥammadan type, dated A.H. 40, in Paris, the earliest occurrence of the mint of

¹ Considerable controversy has taken place over this coin, which is published by Lavoix in his *Catalogue*, no. 158. I hope to be able to deal with this coin in a subsequent volume of this Catalogue. The date is certainly due to a mistake on the part of the die-engraver.

Başra on Muḥammadan coins of non-Arab-Sassanian type is in the year A.H. 79.1

# 14, 14 a. BLH, Bal<u>kh</u> (بلخ)

The customary rendering of this mint-signature—which is of fairly common occurrence on Sassanian coins—has been BBA, and has usually been regarded as indicating the great winter residence of the Sassanian monarchs on the Tigris, which they called Medīnathā, 'the Cities', the name which the Arabs passed on as al-Madā'in (المدائن). Here had been the twin capitals of the Seleucids, Ctesiphon and Seleucia. Ctesiphon, we know, appeared in Sassanian times under the ideographic form dar, i.e. 'the Sublime Porte', a meaning which can certainly be paralleled in BBA or in the Arabic al-Bab, 'the Door' (par excellence). But there are strong arguments adducible against such an identification: (a) After the Arab conquest of 'Irāk, about A.H. 16, Ctesiphon sank into insignificance and the new Islamic foundation of Kūfa some miles away took its place as a centre of administration. (b) We have coins of this mint issued by the last Sassanian monarch Yezdigird III dated in the final year of his reign (A.H. 31), which is a considerable time after Medīnathā was in the possession of the Arabs. (c) As Yezdigird's last stand was made in the Khurāsān province the mint in dispute is likely to have lain in that region. (d) Moreover, supporting this last point, there is the fact that almost all the Arab governors we know to have struck coins with the above mint-signature were in charge of territories towards the Eastern districts of Iran, and all their other mints are actually located there. These considerations would lead us to conclude that wherever the mint lay it cannot have been in 'Irāk. Thomas (J.R.A.S., 1852, p. 391) actually wished to locate it in a suburb of the city of Merv. An objection to this, however, would be the fact that the same governors who issued coins with the mint-name in question have also coins with the mintname of Merv (MRW, no. 41).

It has occurred to me that if we regard the middle letter of the above Pehlevi signature as being the letter which stands for R or L, the name appears quite startlingly as BLH, and supplies us with the very name of the great metropolis of the <u>Khurāsān</u> province, which, incidentally, is otherwise unknown on Arab-Sassanian—or, for that matter, Sassanian—coins, a fact which is surprising considering the city's undoubted importance, not to mention its existence as an Umaiyad mint

¹ Lavoix, Catalogue, no. 174. A similar specimen has recently been added to the British Museum Collection.

on the Reformed Coinage. If objection be made to the unusual form of the letter R or L compare the following parallels:

BLH (no. 14) שיש אוניים (no. 26) איניים and Hura (no. 25) איניים מאר (no. 48) איניים אוניים אוניים

It seems to me that the above interpretation is by no means fanciful although it upsets a long-established opinion.

The following are the Arab-Sassanian coins struck at this mint:

'Ubaidallāh ibn Ziyād, year 62 (A.H.) Salm ibn Ziyād, year 67? or 68? (A.H.) 'Abdallāh ibn <u>Kh</u>āzim, years 67 and 68 (A.H.) Umaiya ibn 'Abdallāh, year 77 (A.H.).

All the above dates are obviously in terms of the Hijra era. Umaiya ibn 'Abdallāh, we know from the annalists, was governor of Khurāsān in A.H. 77. His coins are in agreement with this, as well as being in support of the above mint interpretation.

### 15, 15 a. BRM, Birāmķubādh or Birāmķobādh (برمقاذ)

This mint-signature is only known from two coins which are published in the present Catalogue for the first time. The above interpretation is made on the present writer's responsibility. It was arrived at by the following process of reasoning. Amongst the Umaiyad dirhams of the Reformed Currency we have examples of a rare mint which in its Kufic script is as follows . Various interpretations of this legend have been made by oriental numismatists, but no suitable geographical location was arrived at. Fraehn, Numi Kufici (1823), p. 30, Pl. XIX, no. 2, published the first specimen dated A.H. 80, and read the mintname as Beremkobad with a query and without succeeding in locating any such place. This was repeated by Moeller, De Numis Orientalibus (1826), i, p. 90, without comment. Dorn, Additamenta, i, p. 219, no. 33 a, mentioned another example dated A.H. 93. Stickel (in his Handbuch, 1845, i, p. 9) proposed an absurd attribution to Balkh. In 1859 Bartholomaei in his first Lettre à M. Soret in Revue de la Numismatique Belge (pp. 331-2, Pl. XIV, fig. 1) suggested reading Nerim Kobad (which

Stickel in Z.D.M.G., 1862, p. 780, tried to locate). Tiesenhausen (Catalogue, 1873, nos. 287 and 389, and additions on pp. 298-9, Pl. II, no. 8) added nothing to the elucidation. Lavoix (Catalogue, 1887, i, nos. 172 and 173) published two further specimens, one of which was dated A.H. 79, the earliest recorded date. He suggested the reading Bezmkobâd and endeavoured, but very unsatisfactorily, to locate a place of that name. This rendering was accepted by Stickel (Z.D.M.G., 1884, p. 690). The coin in the Princesse Ismail Collection, now in the Arab Museum, Cairo, dated A.H. 95, and said by Casanova (Inventaire Sommaire, 1896, p. iv and p. 4, no. 107) to be of uncertain mint is, as I have found after an examination of the coin itself, also of the above mint. A further example dated A.H. 90 was published in 1921 (Num. Chron., p. 318) by Porter from the Collection of the American University of Beirut. He adopted the rendering Narimkobād. Zambaur (Wien. Num. Zeit., 1922, pp. 4-5) in reviewing Porter's article preferred to follow Lavoix and Stickel. He went further, however, and identified the place with the Bezkobad (برقاد) or Abezkobād (ابرقاد) of the Arabic geographer Yākūt (i. 605), who placed it in 'Irāk not far from Maisān and Dasht-i-Maisan, both of which are, in fact, also Umaiyad mints. Zambaur regarded Bezkobād as a misspelling of Bezmkobād. That there has been a great deal of confusion in the spelling and location of this place is evident from the varying statements in the Arabic geographers and historians, e.g. we have بقاذ ارتقاذ (Yāķūt), إقاد (Marāṣid al-Iṭṭilā'). It has been placed: (a) between Maisān and Dasht-i-Maisān; (b) between Başra and Wāsit; (c) near al-Madhār, capital of Maisān district; and (d) it has been identified with Arrajan in the province of Fars.

Marquart (Ērānšahr, p. 41) has emended the name to الزفاذ (Īzkubādh) and derived it from an earlier form الزدفاذ (Īzadkubādh). He pointed out that the name has been frequently confused in the traditions with the official title of Arrajān, where the Sassanian king Kobād (or Kubādh) settled certain prisoners of war from Āmid. The Pehlevi title of this settlement was, according to him, Weh Amið-i-Kawāð, i.e. 'Good (or better) Āmid of Kobād', contracted to Wāmkubādh (وامقاد), or simply Amidkubādh (امدقاد). This, he states (f.n. 1, p. 42) ought to be the emendation made to the form of the name in Ṭabarī (i, p. ۸۸۷-۸۸۸), viz. Rāmķubādh (رامقاذ) or Ramķubādh (رامقاذ). On the contrary, it

¹ Ahmed Ziya (Cat. of Islamic Coins, pp. 4 and 165) records two coins of the year 80, whose mint-names he reads as bezmiqbad (bezmiqubad) and bezmiqbad élésa (bezmiqubad ulesa).

seems to me that the form in Ṭabarī gives us, in fact, the clue to the name on the Umaiyad coins. By restoring the prefix bi (ب) we get the full name Birāmkubādh (برمقباذ or in scriptio defectiva برمقباذ. Cf. Bishāpūr and Shāpūr) which may, it seems to me, be a possible interpretation of the mint-name. Moreover the rare mint-signature BRM on Arab-Sassanian coins, which we are now considering, would be an admirable equivalent. What then can the coins with this mint-abbreviation tell us?

- (1) It occurs so far only on the coins of two governors, viz.: (a) 'Abd al-Raḥmān ibn Ziyād; and (b) al-Ḥakam ibn Abi'l-'Āṣ. A collation of the mint occurrences in these two cases is very instructive:
  - (a) 'Abd al-Raḥmān's mints and dates, as so far known, are:

No. 8. ARJN, year 54

No. 60. Bj, years 52, 53

No. 15. BRM, year 54

No. 44. NHR, year 54.

(b) al-Hakam's mints and dates, as so far known, are:

No. 8. ARJN?, year 56

No. 15. BRM, year 58

No. 44. NHR, year 56

No. 47. PIL, years 56 and 57?

(2) It is obvious that these two governors, who must have followed close on each other, had jurisdiction over more or less the same area, although each has a mint which the other has not got, viz. Bj and PIL respectively. The other three mints are common to both. No. 44, NHR, is almost certainly Nahr-Tīrā (نهر قري), which is an Umaiyad mint of the Reformed Currency (see below, p. exli) and is in Khūzistān. The other places are consequently to be looked for in the same neighbourhood. If my interpretation of no. 15 is correct, then Birāmķubādh, if it is equivalent to Arrajān, is only across the Khūzistān frontier in the province of Fārs. It is also significant that mint-signature no. 8, according to my interpretation, gives us the Pehlevi equivalent of Arrajān (i.e. arðn), a mint-name that is confined to the above-mentioned governors.

Let us see what Tabari says (in the passage quoted above):

فى حدّ ما بين فارس وارض الاهواز مدينة وسمّاها رامقباذ وهى التى تسمى برمقباذ وتدعى ايضا أرّجان 'On the border between Fārs and Khūzistān [lit. land of the  $H\bar{u}z$ ] is a city named  $R\bar{a}mkub\bar{a}dh$  or  $Biramkub\bar{a}dh$  also called  $Arraj\bar{a}n$ .'

Rāmkubādh, or in its fuller form Birāmkubādh, has to be identified then with Arrajān. Whether this name has arisen from an earlier Wāmkubādh, with a still earlier history as Marquart has outlined, is a matter for the philologist and the historian of place-names. It seems to me at all events that with the evidence at our disposal it is quite feasible to equate the BRM of the Arab-Sassanian coins with the mintname on the later Reformed Currency, which can without any difficulty be read, as I have proposed, Birāmkubādh.

#### 16. BSH?

This mint-signature is of uncertain attribution; it may, in fact, be a badly written BISH (no. 12). Its occurrences are few: 'Ubaidallāh ibn Ziyād, years 51?, 58?, 59? 60 (A.H.) and Muṣ'ab ibn al-Zubair, year 68 (A.H.). [See M. 48, p. 103.]

There can be no doubt about the correctness of attribution of the above mint-signatures. On Sassanian coins there is an even more complete rendering of the name 13, i.e. DARAPKR(T). The above, however, are the only forms occurring on Arab-Sassanian coins.

Dārābjird, the name of one of the five districts of the province of Fārs, and also of its chief town, must be reckoned as a very important mint, as can be judged from its frequent appearance on these coins. In the Umaiyad Reformed Currency it appears under its Arabic name, (sic) Dārābjird, in the years A.H. 80 and 90–98, after which it disappears from Muḥammadan coins completely.² On the Arab-Sassanian coins so far known to us its minting activities can be gauged from the following summary:

¹ In the older cursive Pehlevi the letter  $\checkmark$  (B) is sometimes joined to the succeeding letter, as apparently in this case (see Nyberg, *Hilfsbuch*, i, p. 4).

 $^{^2}$  Its modern name  $Dar\bar{u}b$  is actually used by an Umaiyad poet, and corresponds to mint-signature no. 21 (see Schwarz,  $Iran\ im\ Mittelalter$ , p. 93, f.n. 3). The date 80 occurs on an unpublished dirham in Sir Richard Burn's Collection, Oxford, which I hope to reproduce in a subsequent volume of this Catalogue.

17. Khusrau II type, years 30, 41, and 46?

Mu'āwiya, year 41

'Abd al-Malik ibn Marwan, years 60 and 65 (= A.H. 72 and 77)

'Abdallāh ibn al-Zubair, years 53, 54, 56, 57, and 60 (= A.H. 65, 66, 68, 69, and 72)

Ziyād ibn Abī Sufyān, year 41 (= A.H. 52/3)

'Abdallāh ibn 'Āmir, year 41 (A.H.)

'Abdallāh, year 41 (A.H.)

'Ubaidallāh ibn Ziyād, years 26? (P.-Y.E. = A.H. 58?), 41, 43?, 45, 46, 47, 48, 51, 52

Salm ibn Ziyād, year 26 (P.-Y.E. = A.H. 58?)

Muhallab ibn Abī Sufra; year 76 (A.H.)

'Abd al-Raḥmān ibn Muḥammad, year 70 (= A.H. 82).

18. Mu'āwiya, year 41

Samura ibn Jundab, year 41.

19. Khusrau II type, year 30

Ziyād ibn Abī Sufyān, year 43 (= A.H. 55)

'Abdallāh ibn 'Āmir, year 41 (A.H.)

'Abdallāh, year 41 (A.H.).

20. 'Abdallāh ibn al-Zubair, years 54 and 56 (= A.H. 66 and 68).

21. 'Abd al-Malik ibn Marwān, year 60 (= A.H. 72) 'Abdallāh ibn al-Zubair, year 60 (= A.H. 72).

22. Katarī ibn al-Fujā'a, year 75 (A.H.).

As can be seen, most of the dates on the coins issued from the Dārābjird mint are expressed in the Yezdigird era. In the case of 'Ubaidallāh ibn Ziyād and his brother Salm, the post-Yezdigird era must be implied to explain the early date 26. The era on the coins of Khusrau II type is ambiguous as usual. As 'Abdallāh ibn 'Āmir was governor of Baṣra and its dependencies, including Dārābjird, in A.H. 41, his coins are obviously according to the Muḥammadan era. The coins of the Caliph Mu'āwiya begin with the year of his succession, and are, therefore, most likely to be dated according to the Hijra era, though a date in terms of the Yezdigird era is not out of the question. As 'Abd al-Malik ibn Marwān did not become Caliph until A.H. 65 his Dārābjird coins must be dated according to the era of Yezdigird. It is not surprising that the coins of the fanatic anti-Caliph Ķaṭarī are unquestionably Muḥammadan in their chronology.

## 23. DSHT?, Dasht-i-Maisān? (دشت ميسان)

I have suggested the above interpretation as a possibility only. The name is found on an Umaiyad coin of the Reformed Currency minted in the year A.H. 80 (see f.n., p. cxl). Its occurrence on Arab-Sassanian coins is by no means common:

Ziyād ibn Abī Sufyān, year 52 (A.H.) 'Ubaidallāh ibn Ziyād, years 56, 61?, 62, 63, 64 (A.H.) Muṣ'ab ibn al-Zubair, year 67 (A.H.).

The date on the coin of Muṣ'ab is significant. In A.H. 66-67 he was appointed by his brother as governor of Baṣra, in the neighbourhood of which lay the town of Daṣht-i-Maisān. The last date on 'Ubaidallāh's coins indicates also approximately the period when he must have lost control of this mint to the partisans of 'Abdallāh ibn al-Zubair and his brother Muṣ'ab.

### 24, 24a, 24b. HRA, Herāt (قراة)

There seems to me to be no reasonable doubt that the above mintname is to be identified with the important town of Herāt, now in Afghanistan, but in Umaiyad times the capital of one of the four quarters of the province of Khurāsān. De Morgan 1 rather absurdly argues against this identification on the grounds that a coin of Salm ibn Ziyād credited with this mint-name and dated 26 (see Catalogue, p. 76) could not have been struck at Herāt since that place was not in the possession of the Arabs in A.H. 26. But there is no reason to regard such a date as in terms of the Hijra era. In fact, if we take it as a date according to the Yezdigird era, i.e. = A.H. 37, there is no difficulty whatsoever, since Herāt was captured during 'Abdallāh ibn 'Āmir's expedition into Khurāsān in A.H. 30. But a very strong piece of evidence in support of the Herāt mint is the fact that we have coins of Muhammad ibn 'Abdallāh ibn Khāzim with the above signature dated 67. As we know that the latter was appointed governor by his father, who had subdued Herāt (A.H. 64-65), and that he died not long afterwards, it is certain that any coins he struck would most naturally bear the name of Herāt. Moreover, we know that Herāt was an Umaiyad mint, since we have dated between هراة dated between the years A.H. 90 and 99.2

Arab-Sassanian coins with the above mint-name are known for the following governors:

'Ubaidallāh (ibn Ziyād), years 52? and 56 (A.H.) Salm ibn Ziyād, years 67, and 69 (A.H.) Muḥammad ibn 'Abdallāh ibn <u>Kh</u>āzim, year 67 (A.H.) Kahtan?, year 67? (A.H.).

^{1 &#}x27;Ateliers monétaires des Sassanides', in Rev. Num., 1913, p. 344.

² S. Lane Poole, Catalogue of Oriental Coins in the British Museum, vol. i, no. 167, p. 26.

### 25, 25a, 25b, 25c. HURA?, Khurāsān? (خراسان)

These mint-signatures have not so far been satisfactorily identified. Thomas has read the first of these 1 as <u>Kh</u>ubus, but without being able to locate any such place. The others appear to be a variant of the same name. The fact that the first is found on the coins of 'Abdallāh ibn <u>Kh</u>āzim, governor of <u>Kh</u>urāsān, and also on the coins of Arab-Ephthalite type—as I have termed them—indicates the region in which we ought to look for the enigmatic mint. I have proposed to see in the signature a form of the Pehlevi name for the province of <u>Kh</u>urāsān, which we have in full on some coins (see below, no. 26), viz. Hura for Hurasan. If it be pointed out that the Pehlevi letter — is a B and not an R, it can be said in reply that it is not unlike the R in the mint-signature RD (<u>3</u>) (see no. 48, below). (See also note on BLH, no. 14, above, p. exiii.)

The occurrences of these problematic legends on Arab-Sassanian coins are as follows:

'Abdallāh ibn Khāzim, year 63

Arab-Ephthalite coins (ascribed to 'Abdallāh ibn <u>Kh</u>āzim), years 63, 68, and 69.

These are, of course, Hijra dates.

Umaiya ibn 'Abdallāh, year 64 (= A.H. 76).

This date is almost certainly in terms of the Yezdigird era (see pp. lvii f.).

### 26. HURASAN, Khurāsān (خاسان)

In the Umaiyad period this great Eastern Province of the Caliphate extended from Ķūhistān and Sīstān to the borders of Transoxiana. The first Muḥammadan invasion of Khurāsān began about the years A.H. 30–32 when an expeditionary force under Daḥḥāk ibn Ķais was dispatched there by 'Abdallāh ibn 'Āmir, then governor of Baṣra. But frequent insurrections marked its subsequent history. A second invasion of the province about the year A.H. 42 is recorded, following the establishment of the Umaiyad power in the person of the Caliph Mu'āwiya. Once again 'Abdallāh ibn 'Āmir, the re-appointed governor of Baṣra, directed the necessary operations. But it was his successor, the astute Ziyād ibn Abī Sufyān, who really laid the foundations of Arab control in the province, though revolts continued to break out periodically. The suppression of one of these in A.H. 51 by Rabī' ibn

Ziyād al-Ḥārithī, when he drove out an Ephthalite army, is of interest to us here because of the remarkable Arab-Ephthalite coin described on p. 127 which I have tentatively attributed to this governor. On the death of Ziyād his policy in Khurāsān was ably upheld by his three sons, who in turn governed the province, particularly 'Ubaidallāh and Salm. The province of Khurāsān in these days was administered from the great provincial cities of Abrashahr (Naisābūr), Balkh, Herāt, Merv, and Merv al-Rūdh, a fact which is reflected in Salm's mints of APRSHT (no. 3), Blh (no. 14), hra (no. 24), Mrw (no. 41), and Mrwrut (no. 42). In the year A.H. 64 the then governor of Khurāsān, 'Abdallāh ibn Khāzim, abandoned the Umaiyad cause in favour of that of the rival Caliph 'Abdallāh ibn al-Zubair, and managed to control the province in revolt until his defeat at the Battle of Merv in A.H. 72.

The full name of Khurāsān nowhere occurs on either the regular Sassanian coins or on those Umaiyad coins of the Reformed Currency. The only record, in fact, of its use on the Arab-Sassanian coinage is in the case of Umaiya ibn 'Abdallāh's coin dated A.H. 74.1 Whether the name in an abbreviated shape appears as mint-signature no. 25, 25 a-c, is a debatable point (see above, p. cxix). Other instances in this series are known of the use both of the name of a province as well as that of its chief town or towns, e.g. Sīstān (no. 51) as well as its capital Zaranj (no. 57); Arrajān (no. 8) and its capital Birāmķobādh (no. 15).

# 27. KNJA?, Kanja or Ganja (گنجة)

I am by no means confident about this identification which was proposed by Mordtmann (Z.D.M.G., 1879, p. 131, no. 95), but I can suggest nothing more feasible. The place is in the province of Arrān to the north-west of Īrān. As it is, its only appearance is on a coin reported, but not illustrated, by Mordtmann, with the name of 'Abdallāh (ibn 'Āmir) and dated 40 (see Catalogue, M. 32, p. 51).

## 28-37. KRMAN, &c., Kirmān (كرمان)

This mint-name—alone, or in conjunction with endings of uncertain import—is of frequent occurrence on Arab-Sassanian coins. The province of Kirmān, or its capital, is obviously indicated. None of its territorial sub-divisions can be with any certainty discerned amongst

¹ The Pehlevi form سرايسي Hurasan, however, is already known on the coins of <u>Kh</u>usrau II type with flaming halo (see Sir Alexander Cunningham, *Num. Chron.*, 1894, p. 291, and Herzfeld, *Arch. Mitt.*, 1938, p. 154).

the other Arab-Sassanian mint-signatures or suffixes, unless perhaps al-Shīrajān (no. 49). Lying on the main trade routes from Fārs to Sīstān and beyond to Khurāsān and India, this province was strategically of some importance. The first Arab invasion of this region was under Rabī' ibn Ziyād (c. A.H. 19). Another expedition about the same time was made by 'Uthmān ibn Abi'l-'Āṣ, brother of al-Ḥakam (q.v.), from the direction of the Persian Gulf. But the conclusion that there was little real success attending these ventures may be deduced from the fact that coinage does not begin to appear before A.H. 59. As an Umaiyad mint of the Reformed Coinage it is known from the year A.H. 90.1

The occurrences of the various mint-signatures are as follows:

'Ubaidallāh ibn Ziyād, years 56?, 59, 60, 61, and 62

'Abdallāh ibn al-Zubair, years 62, 63, 66, 67, 68, and 69

'Umar ibn 'Ubaidallāh, year 65

Muş'ab ibn al-Zubair, years 69, 70?, 71, and 72?

'Aṭīya ibn al-Aswad, years 72, 73, 74, and 75

Muhallab ibn Abī Şufra, years 76, 77, and 78.

All the above dates are in terms of the Hijra era. The coins fairly represent the history of the mint as well as the vicissitudes of the Umaiyad cause. The revolt of 'Abdallāh ibn al-Zubair and the overthrow of the Umaiyad governor 'Ubaidallāh are clearly represented. We also note the Zubairid supporters in the person of 'Umar ibn 'Ubaidallāh ibn Mi'mar and Muṣ'ab ibn al-Zubair in possession of the mint. The latter succeeded the former as governor of Baṣra and its dependencies—including Kirmān—in the year A.H. 66/67. His last dated coin A.H. 72 also marked the year of his death. The historians' report regarding the subsequent revolt of the religious sectarian 'Aṭīya ibn al-Aswad in Kirmān Province, and his defeat by the loyalist forces of Muhallab, is also corroborated by the above coin evidence.

## 38. KVAT?, -kobādh (?قاذ)

The only suggestion that I can offer regarding this mint-signature is that it conceals the name of some place associated with the Sassanian monarch Kobādh, after whom many towns were named. Even if this hypothesis be correct, however, there still remains the problem of its location. It might possibly have been in the district of Kobādh-Khurra in the province of Fārs. The sole occurrence of the name is on coinage of Ziyād ibn Abī Sufyān dated A.H. 52 (no. 66, p. 45).

¹ Lane Poole, Cat. of Oriental Coins, i, p. 23, no. 142.

#### 39. MTB?

Mordtmann identified this with Meibud in Kirmān. As its appearance on Arab-Sassanian coins is confined to a single example of the Khusrau II type dated 35, which is reported solely on Mordtmann's authority, it can scarcely demand any serious consideration from us here. [See M. 12, p. 13.]

Merv (or Marw), the capital of one of the quarters of the province of Khurāsān, was a great emporium on the trade-route from Īrān to Turkestan and the Chinese territories beyond. The Arabs captured it in A.H. 31, that is, in the twentieth year of the era of Yezdigird III, who perished in that very year in the neighbourhood of the city. Thereafter it was the centre of government and the rallying point for the early Islamic raids, such as those of Salm ibn Ziyād, into Transoxiana. The abbreviation of the town-name MR (no. 40) was commonly used on Sassanian coins—from the time of Bahrām V. On the early Arab-Sassanian dirhams this is also the form employed, e.g.

Yezdigird III type, year 20 = A.H. 31

Khusrau II type, years 21, 25, and 48, i.e. probably A.H. 32, 36, and 60.

But a complete rendering of the name MRW (no. 41) in course of time came into use under the Muhammadans on their coins, e.g.

Salm ibn Ziyād, years 62, 63, 64, 65, 66?, 67?, 68?, 69, and 70 'Abdallāh ibn <u>Kh</u>āzim, years 63, 64, 65, 66, 67, 68?, 69, 70, 72, and 73 Arab-Ephthalite (ascribed to the latter), year 69 'Abd al-Malik ibn Marwān, year 75.

These are all Hijra dates. Salm was definitely in control of the province of Khurāsān from A.H. 60 to 64, although the Zubairid governor 'Abdallāh ibn Khāzim disputed the honour with him from the year A.H. 63 onwards until his death in A.H. 72 or 73. That is why both antagonists have coins of the same years from the same mint struck in support of their respective claims. The coin of the Caliph 'Abd al-Malik ibn Marwān marks the end of the internecine struggle and the restoration of the Umaiyads to power.

The introduction of the new Reformed Coinage under this Caliph is testified by coins of the new Muḥammadan type struck at Merv as early as A.H. 73¹ so that both types overlapped. Moreover, even on the new type the Pehlevi mint-name survives alongside of the Arabic legends.²

About midway between Herāt and Merv, in the province of <u>Kh</u>urāsān, lay the important city of Merv al-Rū<u>dh</u>, 'Merv of the River'. Although it does not appear as a mint-town on the Umaiyad dirhams of the Reformed Coinage, it was certainly possessed of a mint under the earlier governors of <u>Kh</u>urāsān, who issued coins of Arab-Sassanian type. The known instances are:

Salm ibn Ziyād, years 63, 64, 67?, and 70 (A.H.) 'Abdallāh ibn <u>Kh</u>āzim, year 69 (A.H.) Umaiya ibn 'Abdallāh, year 64 (= A.H. 76?).

As in the case of the coins of Merv mentioned above, the coinage struck at Merv al-Rūdh also indicates the double claim of Salm and 'Abdallāh to the possession of mint-control in this region. Their coins are dated according to the Hijra reckoning. In the case of Umaiya, who was a loyal supporter of the Umaiyad cause, we must conclude from the above coin either (a) that he was a sub-governor of Khurāsān under Salm the Umaiyad governor, for which there is no evidence in the historians, or else (b) that the coin is dated in terms of the Yezdigird era and was struck in the year A.H. 76, at a time when we know from the annals that this governor was actually in charge of this province. The latter is the more probable conclusion.

Merv al- $R\bar{u}dh$  in its Pehlevi form also occurs as a countermark (nos. 41 and 47). See p. cxliv.

## (ماه البصرة) 43, 43 a, 43 b. NH, Nihāvand = Māh al-Baṣra (ماه البصرة)

Nihāvand (نهاوند) in the Jibāl Province was renamed under the Umaiyads Māh al-Baṣra, because its revenues were allotted to the payment of pensions for the soldiers from Baṣra. Under its new name it occurs as a mint-town on the Reformed Coinage from the year A.H. 79.3 Nihāvand occupied an important place in the early annals of Islam, because near the town was fought the famous battle which decided the

¹ Lavoix (Catalogue, i, no. 202).

² See, for example, Lane-Poole, B.M. Catalogue, Additions, i, p. 35, no. 156 q.

³ Hitherto unpublished coin in the Philip Thorburn Collection, London.

destiny of the Arab forces in their onslaught on the Sassanian empire. As a mint-town, under its old Sassanian mint-signature, it appears at an early date on Arab-Sassanian coins, e.g.

Khusrau II type, years 25, 26, 28?, 29, and 30 (= A.H. 36-41?) 'Abdallāh (ibn 'Āmir), year 41 Ziyād ibn Abī Sufyān, years 51, 52, and 53, and uncertain year 'Ubaidallāh ibn Ziyād, years 57, 58, 59?, 60, 62?, and 63 Mus'ab ibn al-Zubair, year 69? (on Mordtmann's authority only).

Apart from the coins of Khusrau type, whose era is uncertain, these coins are all in terms of the Muhammadan era.

This mint-name also appears in the form NIH (see nos. 45 and 45 a, below).

### (نهر تبرى) 44, 44 a, 44 b. NHR, Nahr-Tīrā

This place was situated in the province of <u>Kh</u>ūzistān to the west of Ahwāz on the road to 'Irāķ. The Arab-Sassanian dirhams issued from this mint are:

Yezdigird III type, year 20 (= A.H. 31) <u>Kh</u>usrau II type, year 27? (= A.H. 38?) Ziyād ibn Abī Sufyān, years 52 and 53 (A.H.) 'Abdallāh ibn 'Āmir, years 20? (= A.H. 31) and 48? (A.H.) 'Abd al-Raḥmān ibn Ziyād, year 54 (A.H.) al-Ḥakam ibn Abi'l-'Āṣ, year 56 (A.H.).

De Morgan (op. cit., p. 354), followed by Paruck (Sāsānian Coins, p. 163), rejected the identification of this mint-signature with Nahr-Tīrā because of the fact that, according to him, there are extant Sassanian coins of Yezdigird III dated in the years 19 and 20 (i.e. a.h. 30 and 31), at a time when Yezdigird had long been driven out of this district. But to my knowledge no such coins have ever been published. Certainly none is reproduced in Paruck. Besides we find amongst the Arab-Sassanian coins that Nhr was a mint possessed in common by two governors, 'Abd al-Raḥmān ibn Ziyād and al-Ḥakam ibn Abi'l-'Āṣ, who at the same time struck coins in Arrajān, which is on the borders of Khūzistān Province, so that the location of the mint cannot be far away from this region. Nahr-Tīrā is consequently quite suitable. Moreover we know that Nahr-Tīrā was actually an Umaiyad mint-town since it figures in the year a.h. 80¹ on dirhams of the Reformed Currency.

¹ Lavoix, Catalogue, i, no. 208.

#### 45, 45 a. NIH, Nihāvand (i.e. Māh al-Baṣra)

This is apparently the same mint as NH (no. 43, above). Its appearances under this form on Arab-Sassanian coins are:

- 45. Khusrau II type, years 33? and 37 (= A.H. 44 and 48?) Ziyād ibn Abī Sufyān, year uncertain.
- 45 a. 'Ubaidallāh ibn Ziyād, year 27? (P.-Y.E. = A.H. 59) [M. 45, p. 68] 'Umar ibn 'Ubaidallāh, year 69 (A.H.) [B. 35, p. 102].

#### 46. PALHAN?

This mint-name, which is only known on Arab-Sassanian dirhams of Salm ibn Ziyād of the year (A.H.) 63, has usually been identified with Balkh, the great metropolis of Khurāsān. But if this be the case, why is it of such rare occurrence, and why is it never found on the coins of the Sassanian monarchs? Besides, in the present writer's opinion, the mint of Balkh is to be identified with mint-signature BLH (no. 14). We must look elsewhere, then, for a solution. In Blochet's Liste géographique des Villes de l'Iran (in Recueil de Travaux, vol. xvii, pp. 166 and 174) there is a town-name which bears a certain amount of resemblance to this puzzling mint-name, namely PARHAN (or PALHAN, since R and L are represented by the same letter in Pehlevi script). This city was apparently built by 'Rûstâm roi du Sagastân' (i.e. Sīstān). It is natural to conclude, as Blochet does, that its situation was somewhere in the neighbourhood of the province of Sīstān. As most of Salm's mints are in the distant Eastern Provinces this suggestion is quite relevant, but far from conclusive. See, for example, the evidence of countermarks (p. exliv). In the circumstances it is better to leave it an unsolved problem.

## 47. PIL?, Fīl? (فا)

This mint-signature, which in the Arab-Sassanian series is only known on dirhams of Ḥakam ibn Abi'l-'Āṣ of the years (A.H.) 56 and 57?, has been variously interpreted. The most natural view, it seems to me, is to equate it with the Arabic  $F\bar{\imath}l$  which, we know, was an Umaiyad mint during the period of the Reformed Currency as early as A.H. 79. The mint of  $F\bar{\imath}l$  has been located in the distant province of Khwārizm in the town of al-Jurjānīa. But as this province was not conquered by

¹ Nützel, Catalogue, i, no. 327. Another example was previously mentioned by Casanova: Collection... Princesse Ismail, no. 20. The earliest notification of such an Umaiyad mint was made by Blau in 1855 (Z.D.M.G., p. 835).

the Arabs until A.H. 93 under Kutaiba ibn Muslim this seems an impossible identification. If the mint-signature PIL is the same as the Arabic mint-name Fil it seems to me that the place in question must lie nearer to the southern provinces of  $\bar{I}r\bar{a}n$ , since it is one of the mints of  $\bar{H}akam$  ibn Abi'l-' $\bar{A}s$ , whose other mints are located in  $\underline{Kh}\bar{u}zist\bar{a}n$  and  $F\bar{a}rs$ . Unfortunately I can find no record of any place of such a name in this region. We must, therefore, leave it as another unsolved mint problem.

48, 48a. RD, al-Raiy (الريّ)

These two mint-signatures, which are almost certainly to be regarded as variants of one and the same monogram, have occasioned much speculation on the part of scholars. The different interpretations, many of them quite fantastic, that have been proposed are summarized by Dr. George C. Miles in his important monograph, The Numismatic History of Rayy.¹ The correct identification, however, has in recent years been demonstrated by Prof. E. Herzfeld.² Briefly the philological aspect of the question may be simply explained as a pseudo-archaistic rendering of RY by RD.³

The important town of Raiy, the Rhages of the Ancients, in the neighbourhood of Teheran, in the Jibāl Province, was conquered by the Arabs between the years A.H. 18–24. Coins of the Umaiyad Reformed Currency struck at this mint are known from A.H. 81 onwards. The following are the known instances of the occurrence of the above mint-signature on Arab-Sassanian coins:

Yezdigird III type, year 21? (= A.H. 32)

Khusrau II type, years 25, 26?, 29?, 32, 35, and 37

Ziyād ibn Abī Sufyān, years (4)6? and 52 (A.H.)

'Ubaidallāh ibn Ziyād, years 38?, 60, 61, 62, 63, and 68 (A.H.)

Bishr ibn Marwan, year 74 (A.H.)

Uncertain Governor (Aslam?), year 67 (A.H.).

The coin of Yezdigird type said to be dated 21 is only vouched for by Mordtmann (see Catalogue, p. 5). Even if his reading be correct the date cannot be regarded as being according to the Hijra era.⁴ All other authenticated specimens of Arab-Sassanian coins of the Yezdigird

¹ pp. 1-3.

² Archaeologische Mitteilungen aus Iran, ii. 2, p. 96. See also Miles, op. cit., p. 3. Nöldeke had suggested it earlier (Z.D.M.G., 1877, p. 149 f. and Geschichte der Perser und Araber, p. 486, f.n. 2).

 $^{^3}$  Cf. the analogous case of mint-signature no. 52 which I have proposed to read as sx for  $S\bar{\imath}st\bar{a}n$  (Pehlevi,  $Sakast\bar{a}n$ ; Arabic,  $Sijist\bar{a}n$ ).

⁴ Miles, op. cit., pp. 5 and 221, has taken it so.

type are dated in the year 20, which marked the last year of his reign and also the triumph of the Muhammadan invasion. It was, moreover, used by the Arab governors on coins of this type, which they struck at mints which did not fall into their possession until long after A.H. 20. In consequence the date 20 on the Arab-Sassanian coins of the Yezdigird type only fits into the chronological scheme if we consider it in terms of the Yezdigird era, i.e. = A.H. 31. Mordtmann's coin, if correctly read, would be of the year A.H. 32.1

As for the coins of Khusrau II type of this mint, there is some uncertainty as to the era used. They may be dated either in the Muḥammadan or else in terms of the Yezdigird era. As they have no governor's name it is not possible to determine which was used. The coin dated 25 (Pl. XXX. 5) is the earliest Muhammadan coin from this mint so far illustrated. At the latest it must be of the year A.H. 36.

Ziyād's coins dated 4(6)? have a defective date, which might be read as SIH (30) or, as I have preferred to regard it, as SHSH (6), i.e. as the digit of some later year only partially expressed. As Ziyād was governor in Trāk from the year A.H. 45 until his death, the date on the coins is almost certainly to be taken as 46 (A.H.). A similar coin which was read by Mordtmann as of the year 30 was mentioned by him, but not illustrated, in Z.D.M.G., 1880, no. 562, p. 161. Miles (op. cit., p. 6, no. 4) came to the conclusion that Mordtmann must have been mistaken about Ziyād's name on the coin because, even taking the date as in the Yezdigird era, it would not agree with our knowledge of Ziyād's period of control in 'Irāk. The interpretation I have suggested above overcomes this difficulty. Two specimens of this coin are known to me, one in the Osman Arıdağ Collection, Istanbul, the other in the Convent of St. Anne, Jerusalem. I have been enabled to illustrate the former specimen on Pl. XL. 2. It will be seen that there is no doubt as to the governor's name.

Ziyād ibn Abī Sufyān, 'Ubaidallāh ibn Ziyād, and Bishr ibn Marwān in their capacity as governors of Kūfa (as well as of Baṣra) would have the Jibal Province under their jurisdiction. Their coins issued at the Raiy mint are all obviously in terms of the Hijra era,2 except in the case of the coin of 'Ubaidallāh (p. 68, I 35) with a date which appears to be 38, although it does not seem to fit any of the eras. At first I was inclined

¹ See further, above, p. xxxv.

² The same is almost certainly the case also with the Uncertain Governor (Aslam?) who coined at this mint in 67 Whoever he was, he was not Aslam ibn Zur'a al-Kilābi as one might be tempted to suppose, and as Miles (op. cit., p. 7) has suggested.

to regard this as a defective 68, but its unusual obverse margin is so similar to that on Ubaidallāh's coins of *Airan* (Sūsa), which are dated 29 and 30, that it is more than likely that the year in question is nearer 30 than 60. Unfortunately, I have been unable to illustrate the coin.

## 49. SHI, al-Shīrajān (الشيرجان)

The above interpretation is a mere conjecture on the part of the present writer. The town was the capital of the province of Kirmān. The name is known even in a contracted form  $\underline{\operatorname{Sh}}$ īr  1  in the historians. It is seldom found on Arab-Sassanian coins. The only instances known to me are:

<u>Kh</u>usrau II type, year 30 (= A.H. 41?) Ziyād ibn Abī Sufyān, year 11! (sic) 'Abdallāh (ibn 'Āmir), year 50 (A.H.).

The coin of Ziyād owes its surprisingly early date no doubt to the fact that an old Sassanian reverse die has been re-used at a later period.

## 50. <u>shush</u>, al-Sūs (السوس), i.e. Susa

On Arab-Sassanian coins the Pehlevi name of Sūsa is rare. So far, it makes its appearance only on certain recently discovered undated copper specimens (see Catalogue, p. 171). Otherwise, under an abbreviated Pehlevi title AIRAN (nos. 5-7, q.v.), it is to be found in the same series. Its Arabic name al-Sūs is a mint-name on Umaiyad dirhams of the Reformed Coinage from the year A.H. 80.

### 51, 51 a. SIZAJTA(N), Sijistān or Sīstān (سجستان)

This Eastern Province is otherwise represented amongst the mint-signatures on Arab-Sassanian coins by zR (no. 57) for Zaranj, its capital, and also, according to the present writer's theory, in the mint-signature no. 52 = sR, an abbreviation of the name of the province. On the Umaiyad dirhams of the Reformed Currency the Arabic name of the province  $Sijist\bar{a}n$  appears in the year A.H. 90. The only occurrence of the above Pehlevi forms of the name on Arab-Sassanian coins is on coins of Umaiya ibn 'Abdallāh, year 73 (A.H.) [pp. 107-8].

¹ Schwarz, Iran im Mittelalter, iii, p. 230.

#### 52, 52 a, 52 b, 52 c, 52 d. sk, Sijistān (سجستان)

This mint-signature has for long been read as IZD, and interpreted as the mint of Yezd (يرد), although this mint is not known at all on any of the Umaiyad coins of purely Muhammadan type. The present writer has reached the conclusion, after an examination of the whole series of Arab-Sassanian coins, that the region where coins with this particular mint-signature were struck must have been in the province of Sīstān, and it has seemed to him that it is quite possible to interpret the signature as the initial letters of this province, i.e. either as SD (cf. above, p. cxxvi, RD for Rhages or Raiy) or as SK (for Sakastān, the old name of Sīstān).

It is a common mint-signature on Arab-Sassanian coins, as can be seen from the following summary of its known occurrences:

Yezdigird III type, year 20 (= A.H. 31)

Khusrau II type, years 26?, 28?, 37, 38?, 45, 48, 61?, and 63?

'Ubaidallāh ibn Ziyād, years 56, 57?, 58?, and 63?

Salm ibn Ziyād, year 56 (= A.H. 68)

Talha ibn 'Abdallāh, years 64 and 66?

'Abd al-'Azīz ibn 'Abdallāh ibn 'Āmir, year 66

'Ubaidallāh ibn Abī Bakra, year 79

'Abdallāh ibn al-Hārith (?), year 66.

Most of the above dates are in terms of the Muḥammadan era. The last five governors, as can be seen by a reference to their biographical sketches, were in turn governors of the province of Sīstān. So it seems fairly obvious that their common mint is likely to have been located in that quarter. This signature is also found on the barbarous imitations, described on pp. 125-6, on one of which the name of the capital of Sīstān occurs.

## 53, 53 a, 53 b. st, Iştakhr (اصطخر)

Iṣṭakhr, the ancient Persepolis, was the capital of one of the five great districts of the province of Fārs. Its Arabic name appears on the Umaiyad dirhams of the Reformed Coinage from the year A.H. 90 onwards.¹

The place had had already a long mint history, in Arsacid and Sassanian times, before the Arabs took over control, first of all in A.H. 23 and later, after a period of revolt, c. A.H. 28 or 29.

¹ There is a questionable example of the year A.H. 79 in the British Museum, but little reliance can be placed on this date.

On Arab-Sassanian dirhams st occurs as follows:

Khusrau II type, year 31

Ziyād ibn Abī Sufyān, years 51 and 54 (A.H.)

'Ubaidallāh ibn Ziyād, years 52?, 60, 61, and 62 (there is a copper piece perhaps dated 59?)

'Abdallāh ibn al-Zubair, years 63? and 66 (A.H.)

'Umar ibn 'Ubaidallāh (supporter of the former), years 69, 70, and 71? (A.H.)

al-Muhallab ibn Abī Şufra, years 78 and 79? (A.H.).

Once again the coins chronicle the political movements of the period; the repulse of the Umaiyad cause by the rival Caliph 'Abdallāh ibn al-Zubair and his adherents, followed by their suppression by al-Muhallab ibn Abī Ṣufra and the restoration of the Umaiyad power in the Eastern Provinces.

The only suggestion that I can make regarding the significance of this mint-signature is that it is the same as ART (no. 9), i.e. Ardashīr-Khurra, with an added prefix of uncertain value. It is found on the Arab-Sassanian coins of the following governors:

'Abd al-'Azīz ibn 'Abdallāh ibn 'Āmir, year 71 (A.H.) al-Muhallab ibn Abī Şufra, year 76 (A.H.)

al-Ḥajjāj ibn Yūsuf, years 78 and 80 (A.H.).

Both Muhallab and Ḥajjāj have also coins of this year struck at Ardashīr-Khurra in the province of Fārs. This supports the above explanation.

## 55. TPURSTAN, Tabaristān (طبرستان)

Although this province appears in possession of a mint on a rare Umaiyad coin of the Reformed Currency of the year A.H.  $102^{1}$  it nowhere occurs on the Arab-Sassanian coins issued by the Umaiyad governors. The first occurrence of the Pehlevi name on Muḥammadan coins is c. A.H. 144, when the 'Abbāsid governors of the province took over the coinage system of the Ispahbads. These coins are described in the Catalogue on pp. 131–61. For an historical and geographical sketch of Tabaristān reference should be made to pp. lxix–lxxx.

¹ Lavoix, Catalogue, i, no. 440, Pl. III.

#### 56. ZANKAN?, Zanjān (زنجان)?

As Zanjān, a large city in the province of Jibāl, is not represented amongst the mints of the Umaiyad Reformed Coinage the above identification is put forward with considerable reserve. The only occurrence of the name in full is on the Arab-Sassanian coins of 'Ubaidallāh ibn Ziyād dated A.H. 63. The same mint-name, however, may be contained in nos. 62, 62 a-b below. Zanjān was an important station on the great highway from Adharbaijān to Ķazwīn. See also M. 25, p. 46.

# 57, 57 a, 57 b. zr, Zaranj (زرنج)

Zaranj is the capital of Sīstān Province (see nos. 51 and 52). On the Arab-Sassanian dirhams it is known in the following instances:

Khusrau II, year 47 (A.H.?)

'Abdallāh ibn al-Zubair, year 69 (on Mordtmann's authority)

Ziyād ibn Abī Sufyān, years 51, 52, and 53? (A.H.)

'Ubaidallāh ibn Ziyād, years 26 (= A.H. 58) and 57 (A.H.)

'Abdallāh ibn <u>Kh</u>āzim, year 64? (A.H.)

Katarī ibn al-Fujā'a, year 75 (A.H.)

Muhallab ibn Abī Şufra, years 75 and 76? (A.H.)

Uncertain Governor (Muḥammad), year 40?.

The Arabic name of *Zaranj* also appears on a barbarous imitation of an Arab-Sassanian coin of uncertain date (see Catalogue, p. 126).

#### 58. BN? or ZN?

I can offer no satisfactory equivalent of this mint-signature. In the Arab-Sassanian series it occurs on the following coin (p. 48):

'Abdallāh ibn 'Āmir, year 30.

This may be a Hijra date since 'Abdallāh was first appointed over Baṣra and its dependencies in A.H. 29.

#### 59. s?

This uncertain mint-signature occurs on the following Arab-Sassanian coin (p. 13):

Khusrau II type, year 35.

The era is indeterminate, probably Hijra.

#### 60, 60 a. Bj?

This puzzling signature might readily be regarded as an abbreviation of BJRA (no. 13), i.e. al-Baṣra, but as it is known on Sassanian coins of Yezdigird III long after that city was in Arab possession, as well as on Sassanian coins before Baṣra was founded, this explanation could not be sustained. As in the case of BLH (no. 14) the location of the mint would seem to be somewhere in the eastern territories. There may be some significance in the fact that the same form occurs as a suffix in the mint-name (no. 37) KRMANBJ. On Arab-Sassanian coins it occurs as follows:

Yezdigird III type, year 20 (= A.H. 31) 'Abdallāh (ibn 'Āmir), year 20? (= A.H. 31)

'Abd al-Rahmān ibn Ziyād, years 52 and 53 (A.H.).

#### 61. sr?

This may be a blundered form of st (no. 53), i.e. Iṣṭakhr. As such it was read by Père Paulin Lemaire (in *Num. Chron.*, 1938, p. 295), but it is more probably a bungled form of no. 54 (q.v.). The sole example on Arab-Sassanian coins is: al-Ḥajjāj ibn Yūsuf, year 80 (A.H.).

### 62, 62a, 62b. ZANK?

These may be variants of the mint-name no. 56 above, which has been conjecturally read as  $Zanj\bar{a}n$ . The following are the occurrences of these uncertain mint-signatures on Arab-Sassanian coins:

Ziyād ibn Abī Sufyān, year 54? (authority of Mordtmann) 'Ubaidallāh ibn Ziyād, years 60 and 63 (A.H.).

# 63. APNURAN ?, Ābnūrān ? (آبنوران)

This uncertain mint-signature occurs only on the unique Arab-Ephthalite coin described on p. 127. If the reading proposed is correct, there is a place called  $\bar{A}bn\bar{u}r\bar{a}n$  mentioned by the Arab geographer Ibn  $\underline{K}hurda\underline{d}hbih^1$  that might correspond. The place is also called  $\underline{A}nb\bar{u}r\bar{a}n$  and  $\underline{A}mur\bar{a}n$ . This was the name of a district and town in the province of  $\bar{F}ars$ . The town lay on the road to  $\bar{A}rraj\bar{a}n$ , west of

¹ 45. 5 (quoted by Schwarz, Iran im Mittelalter, i, p. 39).

² Le Strange, The Lands of the Eastern Caliphate, pp. 264-5.

Nawbanjān, in a very fertile region. The drawback, however, to this identification is the fact that the Arab-Ephthalite coins appear to be associated with the province of Khurāsān. As I can find no place in that province that can be made to fit the Pehlevi legend, I must leave the difficulty unsolved.

#### 64. SHAJA?

This uncertain mint-signature is found only on one coin, viz. al-Mughīra ibn al-Muhallab, year 71 (A.H.). See Notes, pp. 194-5.

#### Geographical Outline

A brief geographical survey of the Eastern Provinces and their known mints in Umaiyad times may be useful. The following notes are consequently best studied in conjunction with the map on p. cxliii and the details of Pehlevi mint-names already recorded above on pp. cii—cv. It must be borne in mind always that the name of a province may also—in fact, usually does—indicate its chief town, which is known by the same name although it may have another name as well, e.g. Sijistān or Sīstān (province) also stands for its capital Zaranj. Both names are in fact employed.

The province of ' $Ir\bar{a}k$ ' in early times was divided into twelve districts (or  $Ast\bar{a}n\bar{a}t$ ). Each district (or  $Ast\bar{a}n$ ) in its turn was subdivided into a variety of sub-districts called Tassūj. An outline of these to indicate the Umaiyad mint-towns may be useful; the known mints are underlined:

- A. East of the Tigris we have:
  - (1) the Astān of Shādh Fīrūz or Ḥulwān (حلون).
  - (2) the Astān of Shādh Hurmuz, round Baghdad, and including the sub-district of al-Madīna al-'Atīķa (المدينة العتقة) (ancient Ctesiphon).
  - (3) the Astān of Shādh Ķubādh comprising the sub-district of Khusrau Shādh Hurmuz (خسر شاذ هرمز).1
- B. In the territory watered by both the Tigris and Euphrates we have:
  - (4) the Astān of Nahrawān, in which al-'Āl and perhaps the rare mint of al-Jisr may have been situated (?).
  - (5) the Astān of Kaskar including the town of Kaskar (کسکر) and the important town of Wāsit (واسط) built by the famous Umaiyad Viceroy Ḥajjāj ibn Yūsuf (q.v.) in A.H. 84. The latter's

¹ Lane-Poole, B.M. Cat., ix, p. 31, no. 79 f.

late foundation precludes its appearance among the Arab-Sassanian coins of the Umaiyads. The mint of al-Mubāraka

is perhaps to be located in this district.

(6) the Astān of Shādh Bahman including the two sub-districts of Maisān (دشت مسان) and Dasht-i-Maisān (دشت مسان), the capital of which, al-Madhār, also appears as a mint-name. In this district was the celebrated Muhammadan capital of al-Baṣra (العرق)). The rare mints of al-Bayān and al-Furāt are also in this region.

#### C. West of the Tigris we have:

- (7) the Upper Astān (الاستان الاعلى).
- (8) the Astān of Arda<u>sh</u>īr Bāb<u>gh</u>ān. In this district was located the celebrated new garrison city of the Muḥammadans al-Kūfa.
- (9) the Astān of Bih Dhīvmāsufān.
- (10) the Astan of Upper Bihkobadh (ربهقاذ الأعلى).
- (11) the Astān of Middle Bihkobādh (بهقباذ الأوسط).
- (12) the Astan of Lower Bihkobadh (بهقباذ الأسفل).

Of the above mints, which we know were active in the Umaiyad period following upon the Currency Reform of 'Abd al-Malik, there is only one that can without hesitation be paralleled amongst the mints that issued Arab-Sassanian coins, viz. al-Baṣra = Bɜ̃ra (no. 13). The other Arab-Sassanian mint-name that is, almost without doubt, to be located in this province is BH (no. 11) = Bihkobādh, which might be any of the three districts of that name. Daṣht-i-Maisān may also be the equivalent of signature no. 23. The extraordinary thing is that the second of the two great garrison cities established by the Arab conquerors in this province, al-Kūfa, apparently does not figure amongst the Arab-Sassanian mint-signatures. The earliest record we have of it as a mint-city is the date A.H. 79 on an Umaiyad dirham of the Reformed Currency.

The province of al-Jazīra (الجزيرة), i.e. 'the Island', so called because it lay between the Tigris and the Euphrates, does not figure to any great extent in the coinage of the Umaiyad Caliphs. The only town of this province whose name occurs on an Umaiyad dirham of the Reformed Currency period is Ḥarrān.¹ Two other towns only occur as mint-names under the Umaiyads: al-Mauṣil (Mosul) and al-Ruhā (Edessa); both,

¹ The sole published example is in the Istanbul Museum (Catalogue, p. TV, no. AT, Pl. I). I have verified the date (A.H. 87) from the coin itself.

however, on the copper coinage. There is no evidence that any of the mint-signatures on the Arab-Sassanian coins belong to places in the province of al-Jazīra.

The province of Adharbaijān (اذربيجان) was of little consequence in the early days of the Caliphate. That it did possess a mint-town is evidenced by the presence of the name on dirhams of the Reformed Currency and its probable equivalent ATRA (no. 10) on the Arab-Sassanian coins. That is the extent of its numismatic interest to us in this work.

Of the north-west provinces those of Arrān (ارمنة) and Armīnīya (ارمنة) have a certain interest in the history of Umaiyad mints. The former is found on a dirham of the Reformed Currency of the year A.H. 90¹ and it is just possible that one of its towns, Kanja (قنجة), may be the equivalent of a rare mint-signature, reported but not confirmed, on an Arab-Sassanian coin, knja (no. 27). The latter province of Armīnīya not only occurs under its own name on the Umaiyad dirhams of the Reformed Currency from the year A.H. 81 onwards, but also under that of its capital Dabīl from the year A.H. 84. No mint-signature on the Arab-Sassanian coins has so far been definitely allocated to this province.

The province of Jibāl (جبال), the ancient Media, comprised four districts, of which the following four cities were the respective capitals:

(a) Ķirmīsīn (later Kirmānshāh); (b) Hamadhān; (c) al-Raiy; (d) Iṣfahān (Jaiy).

- (a) This district, now in the modern Kurdistān, has no numismatic interest for us here.
- (b) Hamadhān (همذان) is not only a mint-city on Reformed Currency dirhams from the year а.н. 90 onwards, but appears under its mint-signature анм (no. 4) on the Arab-Sassanian coins.
- (c) The important city of al-Raiy (الري), the ancient Greek Rhages, likewise appears on the Reformed Currency dirhams from the year A.H. 81 and on the Arab-Sassanian coins under the guise of the mint-signature RD (no. 48).
- (d) Part of the city of Iṣfahān (اصفهان) appears as a mint-place under the name of Jaiy (جي) on the Reformed Currency dirhams from the year A.H. 75 onwards; but no indication of its presence amongst the mint-signatures on the Arab-Sassanian coins has yet been detected.

¹ Arch. Soc. St. Petersburg., vi, p. 231.

In addition to the above the following places in the Jibāl Province are known to have struck Umaiyad Reformed Currency dirhams:

- (1) Māh al-Baṣra (ماه البصرة) from the year A.H. 79. This place is the old Sassanian city of Nihāvand, which appears on the Arab-Sassanian coins as NH and NIH (nos. 43 and 45).
- (2) <u>Dastawā</u> (دستوی), which was a town and district belonging partly to Raiy and partly to Hama<u>dh</u>ān, appears on the dirhams of conventional Muḥammadan type from the year A.H. 91. Apparently it does not occur on our Arab-Sassanian coins.
- (3) The same applies to the district of <u>al-Taimara</u> (التيمرة) or <u>Shakk</u> <u>al-Taimara</u> (شق التيمرة). Dīnāwarī¹ records that the district of Ispahān was split (شق) into the two divisions of Jaiy and al-Taimara (hence شق).

One other place in this province may perhaps have been an Umaiyad mint, viz. the town of Zanjān (زنجان) or Zankān (زنجان). Yāķūt² says it lay near to Ķazwīn and Abhar, which would be somewhere in the district of Dastawā. This seems to be the mint that appears on the Arab-Sassanian coins as Zankan (nos. 56 and 62); the name occurs nowhere, however, on the later Umaiyad coins after the Currency Reform.

The province of <u>Khūzistān</u> (خوزستان) comprising all the alluvial country of the river Kārūn—the *Dujail al-Ahwāz* or Little Tigris of the Hūz (tribe), who gave their name to the province—is quite rich in Umaiyad mints, though so far only two appear to be identifiable with any certainty on the Arab-Sassanian coins, viz. (a) <u>al-Sūs</u> (السوس) and (b) Nahr-Tīrā (نهر تيرى).

- (a) al-Sūs, the ancient Susa, not only occurs under the Arabic name السوس on the Reformed Currency, from the year A.H. 80, but also on the Arab-Sassanian coins, both under its Pehlevi name <u>shush</u> (no. 50) and under its Pehlevi official title <u>Airān-Khurra-Shāhpuhr</u> abbreviated to AIR, AIRA, or AIRAN (nos. 5, 6, and 7). The excavations of the French *Mission Archéologique* in that neighbourhood have been fruitful of numismatic discoveries, and more will, no doubt, be forthcoming.
- (b) Nahr-Tīrā, a town on the main road from the capital of Khūzistān Province, al-Ahwāz, across to the chief cities of 'Irāķ, had a mint

¹ Kitāb al-Akhbār al-Ţiwāl, ed. V. Guirgass, p. 68.

² Mu'jam al-Buldān, ed. Wüstenfeld, ii, p. 948.

under the Umaiyad Caliphs. Its earliest appearance on their Reformed Currency coins is A.H. 80. The mint-signature NHR (no. 44) on their Arab-Sassanian coins has been in consequence identified with this place.

The other Umaiyad mints in this province, which apparently do not appear on the Arab-Sassanian coins, are:

- (1) Jundai-Sābūr (جندى سابور), formerly the old Sassanian capital of Vēh-Andēw-Shāhpuhr, i.e. 'Good-Antioch of Shāpūr', and celebrated under the Arabs for its famous School of Medicine, appears on Reformed Currency dirhams in the year A.H. 80.
- (2) Sūķ al-Ahwāz (سوق الأهواز), the Arab provincial capital, appears at the earliest in the year A.H. 79.
- (3) Rāmhurmuz (رأمهرمز), the old Rām-Ohrmizd-Ardashīr was minting Reformed Currency dirhams in the year A.H. 80, as was also
- (4) Manādhir (مناذر), which was the name given to two districts and towns called, respectively, Great and Little Manādhir. Lastly,
- (5) we have the rare mint-name Surrak (سيرّق), a district in the south, which appears as early as A.H. 81.

The province of Fārs (فارس), the ancient Persis, to the east of Khūzistān, was divided into the following five districts: (a) Iṣṭakhr, (b) Sābūr (or Bishāpūr), (c) Ardashīr-Khurra, (d) Dārābjird, and (e) Arrajān. Each one of these appears on the Arab-Sassanian coins as a mint-name.

- (a) Iṣṭakhr (اصطنر), the ancient Persepolis of the Greeks, not only appears as a mint-town on the Reformed Currency dirhams as early as A.H. 79, but its Pehlevi name in abbreviation, sr (no. 53), is quite common on the Arab-Sassanian coins struck by the Umaiyad governors of Fārs.
- (b) Sābūr (سابور)—its fuller name is Bishāpūr (به شاپور)—appears as an Umaiyad mint of the Reformed Currency from the year A.H. 80 onwards. Although the capital of the smallest kūra, or district, of Fārs, its Pehlevi mint-signature візн (no. 12) is amongst the commonest on Arab-Sassanian coins, indicating its great importance.
- (c) Ardashīr-Khurra (اردشير خرّة)—its Arab capital, Shīrāz, was not built till A.H. 64—appears on the Reformed Currency in the year A.H. 80.¹ Its Pehlevi mint-signature ART (no. 9) is also of frequent occurrence on the Umaiyad coins of Arab-Sassanian type.

¹ Porter (in Num. Chron., 1921, p. 317).

- (d) Dārābjird (در بعرو) has its earliest known appearance on the Reformed Currency in the year A.H. 80. Nevertheless, that it was an important mint is proved by the frequent appearance of its Pehlevi mint-signature DA, &c. (nos. 17–22) on the Arab-Sassanian coins. One of its chief towns was Fasā (افف), which, although it apparently has no equivalent amongst the mint-signatures, does occur on the Reformed Currency in the year A.H. 79.
- (e) Arrajān (أَرْجان), which adjoins the Khūzistān Province, does not appear amongst the mint-names on the Umaiyad Reformed Currency. On the Arab-Sassanian coins, however, there is a mint-signature (no. 8) which the present writer has proposed to read as ARJN = Arrajān. There is also a hitherto unpublished mint-signature (no. 15) which the present writer has also suggested might be read as BRM and interpreted as Birāmkubādh (برمقباذ), which is another name for Arrajān city (see p. cxvi, above).

The province of Kirmān (كمان) had for its chief town the old Sassanian capital al-Shīrajān, the name which, the present writer suggests, may be concealed in the mint-signature SHI (no. 49), which appears on the Arab-Sassanian coins. The only mint-name from this province, however, that appears on the Reformed Currency is that of the province itself on coins beginning with the year A.H. 90. The Pehlevi equivalent of this, with various additional enigmatic letters, is fairly common on the Arab-Sassanian coins in this Catalogue (see KRMAN, nos. 28-37).

The province of Makrān (مكران) apparently had no mint, known to us, at work during the Umaiyad Caliphate and therefore does not concern us here.

The province of Sīstān or Sijistān (سجستان) not only appears on the Umaiyad coinage under its own name, but also under that of its capital Zaranj (زرنج). On the Reformed Currency dirhams the earliest occurrence of the former is in A.H. 90, while that of the latter is in A.H. 101, although there is a stray case where the Arabic name Zaranj is found on a barbarous imitation of a coin of Arab-Sassanian type (see Catalogue, p. 126, no. 245), which might be earlier. The Pehlevi mint-signatures on the Arab-Sassanian coins which have been identified with this provincial mint are as follows: SIZAJTAN? (no. 51) and ZR (no. 57). In addition the present writer, for reasons stated elsewhere, suggests attributing mint-signature no. 52 also to this mint.

The small province of Ķūmis (قومس) lay on the road from Raiy in the Jibāl Province to Naisābūr (Abrashahr) in Khurāsān. Its capital

Dāmghān was formerly often referred to by the name of the province, in accordance with a common Arabic custom. Kūmis is found as a mint-name on Umaiyad dirhams of the Reformed Currency for the first time in the year A.H. 91. There appears to be no trace of its mint activity, however, on the Arab-Sassanian coinage.

The province of Ṭabaristān (طبرستان), the mountain land north-east of Kūmis, for a long time remained independent of Arab control. Nevertheless, in Umaiyad times the Arabic name Ṭabaristān is found on dirhams of the Reformed Currency of the year A.H. 102. On the Arab-Sassanian coins issued during the Umaiyad régime there is no trace of such a mint, but on the coins with Pehlevi legends issued by the 'Abbāsid governors in Ṭabaristān the name TPURSTAN (no. 55) is a regular feature.

The province of <u>Khurāsān</u> (خراسان), the greatest of the Eastern Provinces, was divided into four districts, each with its capital of the same name: (a) <u>Abrashahr</u> (Naisābūr), (b) <u>Merv</u>, (c) <u>Herāt</u>, and (d) <u>Balkh</u>, all of which are represented amongst the Umaiyad mints.

- (a) <u>Abrashahr</u> (أبرشهر), later called Naisābūr or Nī<u>sh</u>āpūr, appears as a mint-city on the Reformed Currency dirhams in the year A.H. 92. But under its Pehlevi name it occurs in the mint-signatures APR, APRSH, and APRSHT: (nos. 1, 2, and 3) on the earlier Arab-Sassanian coins.
- (b) Merv or Marv (a, a) is known as an Umaiyad mint on the Reformed Currency as early as A.H. 73, so that there is an uninterrupted connexion with the coinage of Arab-Sassanian type of the same mint under its Pehlevi name MRW (no. 41).
- (c) <u>Herāt</u> (a) is found on the Umaiyad dirhams of the Reformed Currency beginning with the year а.н. 90, but under its Pehlevi name нва (no. 24) it appears earlier on the Arab-Sassanian coins.
- (d) Balkh (بلخ), the great 'Mother of Cities', first occurs under its Arabic name on the Umaiyad coins of the Reformed Currency in the year A.H. 114, although the form Balkh al-Baidā (بلخ البخ), i.e. 'White Balkh', is recorded in A.H. 111.¹ The present writer has suggested that we must look for this mint under the mint-signature BLH (no. 14), which has previously always been read as BBA. The mint-signature PALHAN (no. 46) has been interpreted as Balkh, but this is unlikely.

¹ This latter name has been attributed to another town in Daghestän (see J.R.A.S., 1871, p. 437), but I see no reason to support this. The style in both cases is the same.

In addition to the above note must be taken of the following:

(a) The Arab-Sassanian mint-signatures so far not identified. (See Table above, on pp. cii ff., especially nos. 58-64.)

(b) A few mint-signatures on Arab-Sassanian coins which have been interpreted as follows, but which do not occur on the Umaiyad coins of the Reformed Currency in this form, namely:

No. 8. ARJN, i.e. Arrajān (in Fārs Province)

No. 26. Hurasan, and no. 25, Hura, i.e. Khurāsān

No. 27. KNJA, i.e. Kanja (in Arrān Province)

No. 42. мвwвит, i.e. Merv-al-Rūdh (in Khurāsān Province)

No. 49. SHI, i.e. al-Shīrajān? (in Kirmān Province)

No. 56. ZANKAN, i.e. Zanjān (in Jibāl Province).

¹ The Pehlevi name does not occur on Umaiyad coins.

The remarkable fact is that the mint-town of Merv al-Rūdh (مرو الروذ), which is quite well known on Arab-Sassanian coins under its Pehlevi form MRWRUT (no. 42), nowhere makes an appearance, as one might expect, on the Umaiyad dirhams of the Reformed Coinage. On the other hand, another Umaiyad mint which was functioning in the days of the Reformed Currency was Sarrakhs or Sarakhs (سرخس), a town midway between the provincial capitals of Merv and Abrashahr. Apparently it occurs nowhere on Arab-Sassanian coins. Its earliest known date is A.H. 90.

The list on pp. cxl f. summarizes and collates the known Umaiyad mints both of the Reformed Coinage and of the Arab-Sassanian group. The earliest known date of the former as well as the latest known date of the latter are noted.

#### IV. COUNTERMARKS

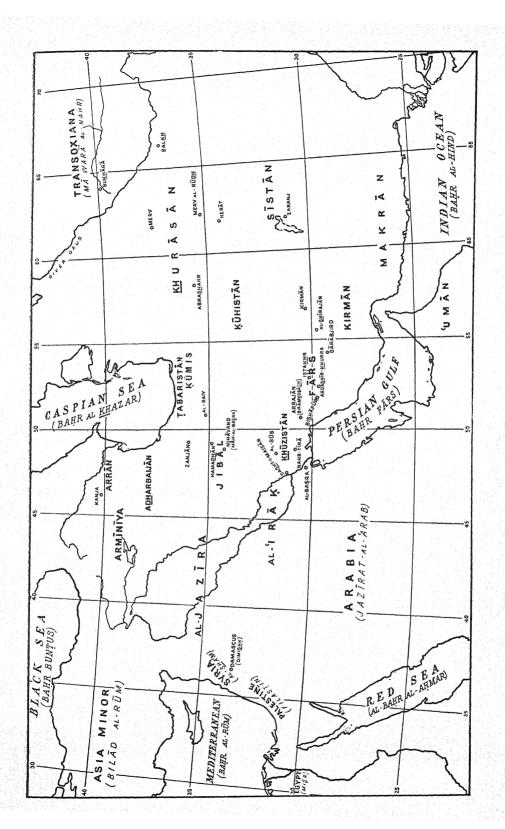

In the Arab-Sassanian series these are to be found only on the coins of the Umaiyad governors in the East. Two curious facts about them are: (a) they are always on the obverse, and (b) they are never stamped over the face of the conventional Sassanian effigy. A rough enumeration of the occurrences of the different countermarks shows that by far the commonest is no. 14 which is frequently used alone, but also quite as often in conjunction with no. 39 or variants of the latter (such as 32, 33, 38), which embody an Ephthalite legend. Most of these are counterstruck very appropriately on coins of Khurāsān.

In fact most of the countermarks are impressed on coins issued at one or other of the famous mints in that great province, where the practice was apparently more prevalent than elsewhere. The coins of 'Irāķ, on the other hand, are seldom counterstamped, and in the few instances where they are, they perhaps received this mark of guarantee in one of the Eastern Provinces in the course of circulation there.

A study of these countermarks can prove quite instructive. The following are some observations made.

One of the most important groups of countermarks is nos. 28, 34, and 40. Each consists of a legend in Ephthalite script, which I have elsewhere (p. lxvii) suggested might contain the name 'Abdallāh, together with a symbol  $u^1$  which closely resembles one  $u^2$  which occurs on

¹ Incidentally this symbol was reported on a coin vouched for by Mordtmann (see M. 28, p. 49) of the governor 'Abdallāh ibn 'Āmir, struck at Merv in the year 41. Unfortunately the reading is not confirmed.

the margin of all the Arab-Ephthalite coins which I have attributed to 'Abdallāh ibn  $\underline{Kh}$ āzim. In addition, countermarks 28 and 40 have pellets. The known occurrences of these countermarks are as follows:

No. 28. Salm ibn Ziyād, Merv al-Rūdh, year 70

No. 34. Arab-Ephthalite coin, Merv, year 69

No. 40. Salm ibn Ziyād, Merv, year 63.

It is noteworthy that such a countermark is *never* used on a coin dated either before or, what is more important, after the period when 'Abdallāh ibn <u>Kh</u>āzim was governor of <u>Kh</u>urāsān. That fits in with the interpretation of the legend above suggested.

Countermarks nos. 41 and 47 are forms of the Pehlevi name for the town of Merv al-Rūdh.¹ The known occurrences are:

Salm ibn Ziyād, Abra<u>sh</u>ahr, year 64; Herāt, year 67; Merv, years 63, 65, and 69

'Abdallāh ibn <u>Kh</u>āzim, Merv al-Rū<u>dh,</u> year 69 ; Merv, year 66 'Umar ibn 'Ubaidallāh, Bi<u>sh</u>āpūr, year 68.

With the exception of the last all these are products of mints in <u>Kh</u>urāsān. Merv al-Ru<u>dh</u> was a mint of both Salm and 'Abdallāh, although the latter apparently only struck coins there in one year, A.H. 69 (see p. 94). 'Umar's coin must have strayed from the province of Fārs where it was minted, and been guaranteed afterwards for currency in distant Khurāsān.

Another interesting group is nos. 6, 12, and 18 which depict a kneeling Bactrian camel. The recorded occurrences are:

No. 6. Salm ibn Ziyād, Merv, year 63; Merv al-Rūdh, year 63

No. 6. 'Abdallāh ibn Khāzim, Merv, years 66 and 69

No. 12. Salm ibn Ziyād, Palhan?, year 63

No. 18. Salm ibn Ziyād, Herāt, year 67.

With the possible exception of the puzzling Palhan (?) all the above coins were definitely minted in the great province of Khurāsān. A Bactrian camel as counterstamp is a very appropriate symbol for that region, which included the great metropolis of Balkh, the Bactra of the ancients. The coins of only two governors bear this countermark—Salm and 'Abdallāh—and both governed Khurāsān. It seems highly probable then that the uncertain mint-name (no. 46), which has been read as Palhan, should be located in this province. In the Mint Notes (p. cxxv) a place-name in Sīstān province has been suggested, but it is not unlikely that the unknown mint was in Khurāsān.

 $^{^{\}rm 1}$  Stickel,  ${\it Handbuch},$  ii. 99, misinterpreted it as 'passirt und gangbar'.

#### TABLE OF COUNTERMARKS

Countermarks nos. 43, 44, 49, and 50 have a Pehlevi word which has been explained as JHLAN, 'current'. If this is the case it is the equivalent of countermark no. 42 which is the corresponding Arabic word ...

The unique Arabic countermark no. 36 has never been satisfactorily explained so far. I have proposed to read it as a Pehlevi word in Arabic guise, namely , i.e. Jhrm (= Jahārum, 'fourth).' Perhaps instead of the ordinal the fraction 'quarter' was intended, in which case it could have a metrological significance. The mistake in the numeral, if such it be, is one that might readily be made by an engraver whose knowledge of Pehlevi was faulty. On epigraphic grounds the Kufic script in which the countermark is written can be ascribed to the first century of the Hijra.

Countermark no. 48, so far as we know, only occurs on coins struck in the province of Kirmān, although a similar countermark, minus the pellets and stroke below (no. 54), is found on a coin of 'Ubaidallāh ibn Ziyād of Baṣra, year 64. The occurrences of countermark no. 48 are as follows:

'Abdallāh ibn al-Zubair, years 68 and 69 Muş'ab ibn al-Zubair, year 69 'Aṭīya ibn al-Aswad, year 72.

It is possible that this might have been a special countermark adopted by 'Aṭīya and stamped by his authority on his own and his predecessors' coins since it consists of the Arabic phrase &, 'to Allah', which is the termination of the celebrated slogan employed by the Khārijites, to whose party 'Aṭīya at one time adhered, namely & \forall \tau', 'There is no judgement unless (that belonging) to Allah!'

As has already been stated none of the above countermarks is found employed in any other section of the Arab-Sassanian series, nor do they occur on the conventional Umaiyad or 'Abbāsid dirhams. The latest known date of any coin on which they are found is A.H. 76. They are not present on any coins of Ḥajjāj ibn Yūsuf, who was the last Umaiyad governor to issue dirhams of this type.

#### V. METROLOGY

The drachm of the Sassanians—the unit of their silver coinage—maintained an even standard of weight from Ardashīr I (A.D. 211/12–241) until the last of the dynasty Yezdigird III (A.D. 632-651). An

average of nearly 2,000 Sassanian drachms weighed by Mordtmann¹ yields the figure 3-906 grm. (60·3 gr.). The dirhams struck by the early Arab governors after the Sassanian type have an average weight that can be put round about the same figure, as can be tested by an examination of the weights of undamaged specimens described in this Catalogue. Zambaur² is therefore quite mistaken in asserting that the Arab governors struck their coins nach reduziertem Fusse. He is led into this error by supposing, for some reason not specified, that the Sassanian drachms had the same weight standard as the Attic drachm, of 4·25 grm. (65·6 gr.).³ Mordtmann's measurements show quite convincingly that they were never as heavy as this. Zambaur also states that many of the Arab-Sassanian dirhams weigh about 2·90 grm. and 'thus agree with the legal dirham', which is calculated as 2·97 grm., i.e. 7/10 of 4·25. Any Arab-Sassanian dirham with such a low weight as stated by him is obviously a clipped or damaged specimen.

The legal dirham (درهم شرعي) to which reference has been made is the approximate weight of the new silver coin of purely Muḥammadan type, which was introduced throughout the Caliph's territory by 'Abd al-Malik ibn Marwān and his celebrated governor-general Ḥajjāj ibn Yūsuf, c. а.н. 75–76. The Arabic chroniclers who mention the early coinage are unanimous in declaring that the relationship of the dirham to the mithkāl (i.e. the gold dīnār weight) was 10 to 7 as fixed by the new Reformed Currency decree. This proportion is amply attested by the evidence of the coins and the coin weights of the period.

Just as the Sassanian drachm furnished the prototype for the early Muḥammadan dirham of the Pre-Reform Currency, so the gold coin of the Byzantine Empire set the standard for the earliest purely Muḥammadan  $d\bar{\imath}n\bar{a}r$ , which first appeared under 'Abd al-Malik ibn Marwān. Most of these  $d\bar{\imath}n\bar{a}rs$  of the Umaiyads were struck presumably at their Syrian capital, Damascus (although they bear no mint indication). The Umaiyad Caliphs struck no gold coins in 'Irāḥ or  $\bar{I}ran$ ,' only dirhams with a few sporadic copper issues ( $ful\bar{u}s$ ). The weight of the Byzantine gold solidus (or nomisma) 'varied but little through the long period of its existence. It is always (when struck at the capital) of more than 60 grains, and the heaviest extant specimens usually weigh from 68 to

¹ Z.D.M.G., 1880, p. 147.

² Article 'Dirhem' in the Encyclopaedia of Islam.

³ These are his figures.

⁴ Though they did in North Africa and Spain. Regarding their reputed gold issues of Arab-Sassanian type see pp. 161. 191, and 193.

70 grains'.¹ The average weight of the Arabic  $d\bar{\imath}n\bar{a}r$  was about 65 to 66 gr., and varied but little. This  $d\bar{\imath}n\bar{a}r$  weight was called a  $mithk\bar{a}l$  and was made the fixed basis of the Muḥammadan monetary system. The weight of the dirham of 'Abd al-Malik's new currency, as has been said, was calculated as 7/10  $mithk\bar{a}l$ , i.e.  $7/10 \times 65.5 = 45.85$  gr. (2.97 grm.), which is about the average weight of the dirhams of the Reformed Currency.

The Arab writers in their occasional references to Muḥammadan numismatics also mention the reduction in the weight of the dirham that took place under 'Abd al-Malik and Ḥajjāj. Such numismatic references in Arabic chronicles have been usefully collected and translated by H. Sauvaire in his Matériaux, a summary of which in English was published by Lane-Poole in Num. Chron., 1884, pp. 66–96. Although much of this material is, at times, fantastic, it does contain elements of truth which can be verified by the coin evidence. Here is a case in point:

During the early Umaiyad Caliphate three classes of Arab dirhams were said to be current: (1) Baghlī dirhams (دراهم بغلية); (2) Ṭabarī dirhams (دراهم طبرية); and (3) Sumairī dirhams (دراهم طبرية).

(1) The Baghlī dirhams were the 'Persian' (or Fārisī) dirhams, which by reason of their usual Sassanian portrait type of Khusrau II were also referred to as Khusrau dirhams (دراهم كسروية). Their high weight in contradistinction to that of the other two classes earned for them the additional name of Wāfī dirhams (دراهم بغلة وافية), 'full-weight Baghlī dirhams'.

The Baghlī dirhams were said to derive their name either from a Jew named Baghl, or from a certain person Rās al-Baghl, who struck them for the Caliph Omar. This can be discounted as folk-etymology. The Baghlī is said to have been of the same weight as the  $mihk\bar{a}l$  and to be equal to 8  $d\bar{a}naks$ .

(2) The  $\bar{T}abar\bar{\imath}$  dirhams came next to the above in popular favour. They were exactly half the weight of the  $Baghl\bar{\imath}s$ , i.e. 1  $\bar{T}abar\bar{\imath}=\frac{1}{2}$  mith $k\bar{a}l=4$  d $\bar{a}naks$ .

Judging from the foregoing it is obvious that the Tabarī dirhams were a species of hemidrachms or half dirhams. But there are no such coins belonging to the Umaiyad period known, nor amongst the coins of the later Sassanian rulers. The half dirhams of the Ispahbads and

³ Ibid., p. 139.

² See Sauvaire, p. 138.

¹ Wroth, Catalogue of Imperial Byzantine Coins in the British Museum, vol. i, p. lxxiv.

the 'Abbāsid governors in Ṭabaristān, however, would fit the requirements not only in weight but also in name (Ṭabarī = belonging to Ṭabaristān). But their date is somewhat outside the period of the  $Baghl\bar{\imath}s$ . There are, however, numerous examples of Arab-Sassanian dirhams of the Umaiyad governors which have been clipped down to the Ṭabaristān size of hemidrachm. This may have been done in Umaiyad times. Such coins might well have passed as Ṭabarīs, although it is most likely that the Ṭabarī dirham was only a money of account.

(3) The Sumairī dirhams were so called because they were first struck by a Jew named Sumair, who recommended them to Ḥajjāj ibn Yūsuf at the time of the great Coinage Reform. These dirhams are obviously the new silver coins of purely Muḥammadan type, which, as we have seen above, were struck according to a reduced standard. This new dirham was equal to six  $d\bar{a}nak$ , which is the average of the weights of the foregoing  $Baghl\bar{\imath}$  and  $Tabar\bar{\imath}$  dirhams. The Sumair $\bar{\imath}$  was, therefore, equal to  $\frac{3}{4}$  of a  $Baghl\bar{\imath}$ , a fact which is corroborated by the average weights of the coins themselves; 2.97 grm. (45.8 gr.) and 3.90 grm. (60.2 gr.) respectively. The statement, however, that the  $Baghl\bar{\imath}$  was the equivalent weight of a  $mithk\bar{a}l$  is not justified.

This reduction in the weight of the dirham introduced at the time of Ḥajjāj was, we are also told, highly resented by the people in the Eastern Provinces. The new dirhams were called 'reprobates'. Nevertheless, the acceptance of the Caliph's new coinage was duly enforced. The demonetization of the old Arab-Sassanian silver proceeded apace. Ḥajjāj enacted that taxes should be paid in dirhams of the <u>Khusrau</u> type. Vast numbers of them must have passed from the Treasury to the various mints to be melted down before being transformed into new dirhams.

In addition to the legal currency in the early Caliphate of the  $d\bar{\imath}n\bar{a}r$  (of gold) and the dirham (of silver) use was also made for smaller commercial transactions of a sort of token money of copper. Such a coin was called a fals (plural  $ful\bar{u}s$ ), a word borrowed from the Byzantines. Just as the Arabs derived their  $d\bar{\imath}n\bar{a}r$  and dirham from  $\delta\eta\nu\delta\rho\iota\sigma s$  (denarius aureus) and  $\delta\rho\alpha\chi\mu\dot{\eta}$  (drachma) respectively, so they took their fals from  $\phi\delta\lambda\lambda\iota s$  (follis). The fals, however, had no fixed weight like the  $d\bar{\imath}n\bar{a}r$  or dirham, and its conventional value appears to have varied throughout different provinces. The Arab metrologists do not indicate that in the early Caliphate there was any fixed ratio between fals and  $d\bar{\imath}n\bar{a}r$  or dirham. The earliest specific mention of such a relationship is

at the outset of the 'Abbāsid rule in the East; on a coin of Sīstān struck in A.H. 136, which was published by the present writer (J.R.A.S., 1935, pp. 115-21). There we are told that that particular fals (weighing 49.6 gr.) was equal to 1/60 of a dirham, and at the same time 'current as a dānaķ'. But at later periods in the history of Islamic currency we find the ratio reduced to 48 or even 24 fulūs to the legal dirham. The countermark (no. 36) on coin no. 243, p. 125, may have some metrological significance indicating the change in the value or ratio of the coin, if the present writer's suggested reading of the legend be accepted (see p. cxlvi).

Local governors had the right of issuing such fulūs, just as in the Eastern Provinces before the Coinage Reform the Umaiyad governors could strike dirhams with their own names, without infringing the Caliph's prerogative of minting (sikka). The fulūs of Arab-Sassanian type—which are all we are concerned with here—are for the most part rare and usually anonymous.

We have already mentioned in the section on the 'Abbāsid coins of Bukhārā (p. xci) three specific varieties of dirham that were issued in that region: (a) Ghitrīfī dirhams (دراهم غطریفیة); (b) Muḥammadī dirhams (دراهم محمدیة); and (c) Musaiyabī dirhams (دراهم محمدیة).

All these Bukhārān dirhams (دراهم بخارية) have according to the Arab writers one feature in common. They are all of base silver. As Ya'kūbī¹ expresses it: 'They are like copper' (شبيه بالنحاس). The extant coins amply support this statement. In this Catalogue they are, therefore, classed as billon coins.

The most interesting account of these Bukhārān dirhams is contained in a continuation of the passage of Narshakhī quoted above, on p. xciii, regarding Ghiṭrīf ibn 'Aṭā.² When the latter came as 'Abbāsid governor to Khurāsān 'the nobles and notables of Bukhārā came to him saying that they had no silver (....) in the city, and requested him as Amīr of Khurāsān to order that silver be struck for them with the same die (...) as the old silver of Bukhārā'. They also stipulated 'that no person should take it from their possession or export it out of the city, so that they might make use of it in their transactions amongst themselves'. The old silver coinage of Bukhārā here referred to must be the Sassanian drachms of Bahrām V (see Plate XXVIII a), which were the prototypes of the native Bukhārān coinage of later days. The

¹ Kitāb al-Buldān, ed. Juynboll, p. 73.

² Ibn al-Athīr, vi, p. 148, gives his name as Ghiṭrīf ibn 'Aṭṭāb.

restriction of the proposed new coinage to home circulation had important economic consequences, as we shall see.

Narshakhī continues: 'At that date silver (قره) was dear. Consequently, the citizens were assembled and asked their opinion on this matter. They agreed that coins should be struck of six substances: gold, silver, musk, lead, iron, and copper. This they did. And with that old die with the name of Ghiṭrīf they struck them, that is to say, Ghiṭrīfī silver (سيم غطريفي), but by the common people they were called Ghidrīfī (غدريفي).' The formula of this alloyed coinage may be regarded as fanciful. Moreover, as has been mentioned already, no actual coins of this class bearing the name of Ghiṭrīf have so far come to light. It is also not the case that old dies were recommissioned. What happened was that new dies after the fashion of the old but with new legends were prepared.

Narshakhī, however, does record the important metrological difference: 'the old silver [coinage] was of pure silver (نقرة خالص) whereas this silver which they struck with alloy became black'. This is clearly the case in all classes of the 'Abbāsid coins of Bukhārā. Naturally the populace had to be compelled by law to accept them. They were tariffed by the government at six Ghitrifis for a dirham of pure silver and were current at this rate. (شش غدريفي بيك درهم سنك نقرة خالص) The effect of this debasement of the currency can readily be imagined. Narshakhī says: 'The kharāj (land-tax) of Bukhārā from 200,000 dirhams of silver, or a little less, all at once increased to 1,168,567 Ghitrīfī dirhams.' The Ghitrīfī, however, rose in value until it was equivalent to a pure silver dirham. In spite of this the scale of taxes remained the same, thus obliging the people of the land to pay six times the original tax. Moreover, the taxes had to be paid in the local currency of *Ghitrifis*. This led to a further increase in their value, to such an extent that some years afterwards these base metal coins were more valuable than fine silver dirhams.

Incidentally Narshakhī reports a tradition that the <u>Ghiṭrīfīs</u> were struck in the Castle of Mākhak (كشك ماخك) in the city of Bukhārā; the coins themselves have no mint-name. He also makes the statement that 'in every dirham there is an amount of gold, and in every ten dirhams it amounts to the weight of half a dirham up to four dānaks and a half'. An analysis of several specimens made for me by

¹ According to Barthold, Turkestan, p. 204.

² i.e. ³ dirham, which is absurd. Blake in his interesting article (in Harvard Journal

Dr. Plenderleith of the British Museum does not support this. In fact Narshakhī's statement can be taken as an early example of the canard that reappears in modern times in the form of the tale that pennies of Queen Victoria of a certain year contain gold.

Although Sauvaire does not quote Narshakhī in his *Matériaux* he has several briefer references from the Arabic historians and geographers on the subject, but they do not add to any extent to our knowledge and need not be repeated here.¹

The other two classes of dirhams, the Muhammadī and the Musaiyabī, have already been considered (p. xci). Like the Ghitrīfī dirhams these two classes were said to be restricted to specific regions. Their areas of distribution according to Ibn Khurdadhbih² were as follows: (a) Ghitrīfīs, Bukhārā; (b) Muhammadīs, Farghāna, Sughd, Kish, Nasaf, and Ushrūsana; (c) Musaiyabīs, Īlāķ, Khojand, and al-Shāsh; all within the territory of the Haital, i.e. the Ephthalite lands of Transoxiana.

#### VI. LEGENDS AND EPIGRAPHY

There are four languages with their corresponding scripts employed to express the legends on Arab-Sassanian coins, namely: Pehlevi, Arabic, Ephthalite, and Bukhārān. Many of these legends still present difficulties of elucidation, though most of them are now decipherable. In addition to the coin-legends we find several of the countermarks embodying inscriptions. These are discussed in the section on countermarks (pp. exlii ff.).

As the Ephthalite and Bukhārān legends have already been considered above (pp. lxv ff. and lxxxv ff.), in so far as our limited knowledge goes, it is unnecessary to consider them any further here. But the Pehlevi and Arabic scripts used on these coins supply us with valuable epigraphic material which is worthy of record. The following tables of the Pehlevi and Kufic (Arabic) characters employed show how liable the inscriptions are to ambiguity, and also the general difficulty of their decipherment, particularly in the case of the names of new governors or of isolated dates and mint-signatures.

of Asiatic Studies, ii, Dec.), 'The Circulation of Silver in the Moslem East down to the Mongol Epoch', p. 304, accepts the possibility of this noble metal content. He, however, betrays no acquaintance with the actual coins. He also mistakenly writes دنیق danāqs.

The Persian text has نانك dānak; in the Arabic writers, and on the unique coin quoted above, p. cl, dānak occurs. The plural is dawānik or dawānīk.

¹ See particularly Sauvaire, pp. 191-2.

² Bibl. Geogr. Arab., vi. 27-8. See Barthold, Turkestān, pp. 205-6; Sauvaire, op. cit., pp. 191-2.

PEHLEVI SCRIPT ON ARAB-SASSANIAN COINS

No.	Coin forms	Transliteration of Pehlevi	Corresponding Arabic letters	Transliteration of Arabic
1	, u	A	ه ع ا	A '(H)
2	ار د	В	ب	В
3	۷ (	ť	ص ز ج	J Z Ş
4	3 J	D	د د د د د د د د د د د د د د د د د د د	D
5	ע ע ע ע איי ע	H	ہ خ ح غ	<u>ен</u> н <u>кн</u> н
6		u or v	و	U or W
7		Z	ج ز	z J
8		I or Y	ی	I or Y
9	3 7 1) 1	K	ج ق ك	к ķ Ј(G)
10	· 1115533	L or R	ر ل	L R
11	0 66	M		M
12	+ 1 F F F	N	ن	N
13	ע יג נג ע נג	s s	س	s
14	000.	F or P	ب ف	F B
15	עו עיק עו עיק עיק עו	SH	<b>ش</b>	<u>SH</u>
16	विध्युत्वा ध्रम	<b>T</b>	د ط ت	ттр

The close resemblance between many of the above Pehlevi letters is obvious. The possible confusion is, however, increased when certain of these are in combination, e.g.  $\omega$ , which might be SH, or is or si, or do so so, &c., or  $\omega$ , which might be AU, HU, AN, HN, AR, or HR. Sometimes a loop is omitted, e.g.  $\omega$  (AP, &c.) instead of  $\omega$ . Moreover, these sixteen Pehlevi letters are used as equivalents of the twenty-eight letters of the Arabic alphabet, and not always consistently since, as the table indicates, we have the Arabic do (3), z (3), B (4), and J (5) each differently represented in the Pehlevi script, as can be seen by a comparison of the Pehlevi transliteration of the names Ziyād, 'Azīz, Ḥajjāj,

and Ṭabaristān. Moreover, at the end of certain Pehlevi words, e.g. in the word AFZUT:, occurs a vertical stroke which has no phonetic value, but acts as a divisional mark. In the transliteration employed in this Catalogue it is represented by a colon.

The inadequacy of the Pehlevi script is closely rivalled by that of Kufic which has similar drawbacks, as the subjoined table shows. The diacritical points, which in later monumental as well as in cursive forms of Arabic writing served to differentiate consonants of similar outline, are almost completely absent from the present coin-legends.²

27	₩ و	9 9- 9	9 9 9	
28	y or i		u	
lām alif	ነ lā	X x	<b>Y</b>	

It must always be remembered in deciphering unpointed Kufic legends that the consonants B, T, TH, and Y or I (except in its final form) are indistinguishable, and also that these letters in combination are likewise liable to be confused with the letter s or SH. In the same way each of the following groups: (i) J, H, KH; (ii) D, DH; (iii) B, Z; (iv) s, SH; (v) s, p; (vi) T, Z; (vii) GH; and (viii) F and K (except in their final forms) is represented by one character. Added to this is the confusion that naturally arises from the close similarity of certain of the letters, especially in the reduced scale necessary for die engraving.

In the above table the letters as found on these coins have been arranged so as to show certain minutiae of epigraphic development in

¹ A case in point is the marginal legend on the coin of Mukātil ibn Misma (no. 208) in which the second letter, if joined to the following one, must be a k (which would agree with the interpretation suggested on p. lvii), but if it is not, must be either a p or a DH.

their shapes with the passage of time. In the Umaiyad period there is definite Pehlevi influence discernible in the outline of certain letters, due no doubt to the employment of old Pehlevi punches in the preparation of the coin-dies. The clearest example of this is in the final h(L) which appears as L due to the use of the Pehlevi letter p(L) as a part of the outline. In the 'Abbāsid period there is no trace of this shape amongst the Kufic letters. The evolution of the script is most noticeably demonstrated in two groups: (i) J, H, KH, and (ii) ', GH. In (i) the final form changes from the archaic to the more cursive L, and in (ii) the ancient open pronged medial shape (L) is clearly closed at the top (L) as indeed it is in the modern alphabet (a). The fact that these modes of script can be dated from the coins on which they occur renders them all the more important for the history of early Arabic epigraphy.

The legends on Arab-Sassanian coins may be classified as follows: (a) Personal names or titles; (b) Dates; (c) Mint-signatures; and (d) Religious and other expressions. Group (a) will be found at the end under Index of Inscriptions; while group (c) is considered at some length under Mint Notes (pp. cii ff.). In group (d) the expressions have been interpreted, wherever possible, either in the Catalogue or in the Notes at the end. The references can easily be found from the Index of Inscriptions. The only other group, (b), that remains to be considered is of some importance, and is given in detail.

# Dates on Arab-Sassanian Coins

### (i) Pehlevi dates

No attempt is made in the following list to give an exact epigraphic representation of all the forms of the Pehlevi numerals that occur in the coin-dates recorded in this Catalogue. All the ordinary forms are given, and, in addition, only those date-legends which are sufficiently noteworthy as variants from the norm. Further minutiae can be extracted, if need be, from a close study of the Plates. Indeed, in all cases the evidence of the Plates is in the end, apart from the actual coins, the safest criterion. In transcribing such legends the pen can so easily exaggerate or distort the various curves and strokes of the original. In view of this I have endeavoured to illustrate as many examples as possible in the Plates so as to provide any check that may be required.

¹ The table of Kufic script here given is thus supplementary to that given by Moritz in his valuable article on Arabic epigraphy in the *Encyclopaedia of Islam*, i, Pl. I, p. 384.

C. 1	42.4 2.75	ÆR 1.15	There is a coin of this mint-signature and date recorded in the Copenhagen Collection (Ostrup, no. 61), although the old interpretation of the mint-signature as zD (= Zadracarta) is followed. But an examination of a cast of the coin kindly supplied to me by Dr. Galster and illustrated above (fig. 1) shows, in my opinion, that it does not belong to the Arab-Sassanian series at all but must be regarded as a rare variety of the regular Sassanian coinage. The remarkable marginal legend is certainly not Arabic, though I do not venture to interpret it as Pehlevi. The date also is problematical.

T. 2			Thomas (J.R.A.S., 1850, p. 283) mentions a coin in the Masson Collection with the mint-signature ZND (he gives the modern Pehlevi transcription (L.D.M.G., 1854, p. 150, no. 754) accepts this but reads the mint-signature as RIU. From Thomas's description it appears that the coin bore the remarkable Kufic legend (D.D.M.G.) From his transcription of this on his Plate II, fig. 20 (D.D.C.) it is obvious that this rendering is epigraphically impossible. The script is neither Kufic nor Pehlevi, but some form of writing resembling that on what I have termed the Arab-Ephthalite coins (see below, p. 127). The coin in question is actually now in the British Museum, having been part of the India Office Collection presented in 1882. As it bears no trace of having been minted by the Arabs I have not included it here. Miles (op. cit., p. 6, no. 5 x) has also noted that the supposed Kufic legend is not Kufic and has rejected the coin from this

M. 17			As Mordtmann (Z.D.M.G., 1879, p. 86, no. 21) is the sole authority for this mint and date, and the coin has never been illustrated, it is impossible to be certain of the accuracy of this attribution. The coin was in the Subhi Pasha Collection. Apparently the obverse margin was . It is of interest to note that on		
			the fourth quarter. The or come across is on the coin of I have attributed above (I	s a small triangle of dots in ally other case of this I have of Sir Richard Burn's which RB. 4, Pl. XXXI. 1) to the vable that both coins are of	
			Year 53?		
M. 18			Mordtmann (Z.D.M.G., 1880, p. 160, no. 561) records a coin in his own collection, which he ascribes to this year, with the mint-signature no. 43 = nh. The coin bears no legend in Arabic that would indicate that it was struck by an Arab Governor. The only reason why Mordtmann considers that it belongs to the Arab-Sassanian group is the fact that the year 53 exceeds the known regnal years of Khusrau II (38). Mordtmann's transcription of the date legend is used. It is more than likely that this is a mistake for this more than likely that this is a mistake for after the present series.

M. 21			The sole authority that I can find for this mint and date is Mordtmann (Z.D.M.G., 1879, p. 90, no. 33). The coin was in his own cabinet. The fact that the marginal legend was بسم الله ربى almost certainly points to a much later date. Unfortunately the coin was never reproduced. On the face of it it appears to me a most unlikely date. In order to fit it into the chronological scheme, in fact, Mordtmann (p. 92) has to equate it in terms of the so-called Tabaristan Era, i.e. the Post-Yezdigird Era.	
			Year 47? (A.H.)

			Baş Year 51 (A.H.)	ra
M. 23			Mordtmann (Z.D.M.G., 1854, p. 152, no. 764) attributes a coin in the Colonel Rawlinson Collection to this mint and year and states that it is apparently the same coin as that described by Thomas (J.R.A.S., 1850, p. 287, no. 1). If this is so, then Mordtmann's reading of the mint-signature was wrong, since Thomas's coin was of the mint of Bishāpūr. See note to ETN. 6 at end of the text. The coin (no. 57) described below, however, may be of this year.

M. 34			Mordtmann (Z.D.M.G., 1879, p. 93, no. 48) recorded a remarkable coin of this mint and year which was in his own collection. Apparently the governor's name aubitals was as usual r. of the bust, but in place of the customary afzut behind the head there was the second line of the name-legend (I-ZIYATAN). The margin was and the mint-signature no. 6=AIRA. While unwilling to doubt Mordtmann's statement about such an unusual variation in the name-legend, I am at the same time rather inclined to believe that the coin in question was one of those described below (O. 7, p. 74 with the name of 'Ubaidallāh only, and that Mordtmann interpreted as process.	
M. 35			Year 59 (A.H.)  The sole authority for this mint and date is Mordtmann (Z.D.M.G., 1879, p. 94, no. 54). Apparently it resembled Th. 10 above except that the mint-signature was no. 5 = AIR. The coin was in the Subhi Pasha Collection.

			Uncerta	in Mint
Т. 9			The coin described by Thomas (J.R.A.S., 1850, p. 291, no. 10) in the Masson Collection seems to be of this same mint (see his Pl. II, fig. ii). The date is uncertain (AMAPPA). Thomas read it as either 56 or 58. It might possibly be a defective 51 or 59. He also interpreted the mint-signature (no. 16) as BISH, but as it does not agree in style with any known examples of that mint (cf. above no. 76) Mordtmann (Z.D.M.G., 1879, p. 93 = Z.D.M.G., 1854, p. 154, no. 776) regarded the mint-signature as a variant of no. 14, which he interpreted as BBA, and the date as 59.	
			X	
М. 39			Year 58 (A.H.)  Mordtmann (Z.D.M.G., 1879, p. 93, no. 51) records specimens in his own and in the Subhi Pasha Collection with the above mint-signature, which he interprets as KSH (= KISHT). Apparently the margin was نسم الله :: « Neither coin was reproduced.

			B. Coins with the name	es of 'Abbāsid Governors
				ibn Barmak
			ل برمك)	(خالد بز
			Year 116 = A.H. 150	
Zub. 2			There is a coin with the name of this governor in Pehlevi characters of this date recorded by Prince Gagarine (Lettre à M. F. Soret, 1862, p. 8, no. 1), who, however, did not substantiate his reading by means of an illustration. Unvala records two examples which he has himself seen: (1) (no. 875) in the Zubov Collection, Moscow, on which the date appears normally as shippers, and (2) (no. 876) in the Stockholm Museum, on which the date has the exceptional form which he transliterates as šūnāčdah-sat (i.e. shunajdhst according to my skeleton transliteration). While not altogether happy about this explanation, I think the specimen in the Zubov Collection settles the matter of the date, which is unmistakable. In the Istanbul Museum I recently saw two specimens with date similar to that on the Stockholm coin recorded by Unvala. If the interpretation given by him is not correct I can only suggest that it is the date 119 (Direction of the beginning. Cf. the note at end to Th. 19 above for what may be a parallel case.

			date. If we compare the date-legend with that on coir of 126, which is a common year for the coins of th governor, the similarity suggests that it is more that probably a defective spelling of the latter date, which is sometimes written we spelling of the latter date, which is sometimes written we spelling of the latter date, which is sometimes written we spelling of the latter date, which is date, therefore, I am inclined to attribute it, the more so as the marginal legend in the second quarter is which is to my certain knowledge—discounting the apparent exceptions in Unvala's nos. 969 and 97 which I have already proved to be due to a mistake of the part of Thomas (see note to no. 266)—does not appear on any certain example before the year 125. The coin in question is in Stockholm—one of the numerous examples from Swedish treasure trove. Unvala's reference is to the Stockholm Inventory no. 8132.

			Year 128 = A.H. 163	
P. 7			The coin in the Paris Cabinet (Lavoix, no. 155) which is ascribed to this year is really dated 126. Mordtmann (Z.D.M.G., 1854, p. 176, no. 896) records a coin of this date in the Ismail Pasha Collection. If this was the case then it was not one of those that found their way into the British Museum through the generosity of Count de Salis, who purchased the Ismail Pasha coins. Thomas (J.R.A.S., 1871, p. 457) mentions this date also amongst the coins of Sa'id, but he may only be repeating the statement of Mordtmann. The coin in the Istanbul Museum (Catalogue, no. 29) which is attributed to this date, I have found on examination to be really 126. Dr. Unvala, however, reports two examples of this date (nos. 1257, 1258), one in the Zubov Collection, Moscow, and another in Stockholm. Unfortunately, beyond a transcription of the date and one or two other details given by Unvala, no specimen of this rare date has been illustrated. His citation from Markoff (no. 2055) of a coin of this date is due to misquotation, see above ANS. 19 note at end.

U. 4			Year 129 = A.H. 164  Unvala (no. 1259) records an example of this year in the Istanbul Museum from a cast with which I supplied him Unfortunately there was a mistake in the casting at the Istanbul Museum, and the reverse of a coin of Yaḥy (see below, I. 54) of this year was sent to me as a reverse of a coin of Sa'īd. It was only when I had an opportunity of examining the coins themselves some month ago that I was able to notice the confusion.		
			(b) With full no Year 125 = А.Н. 160	ame Saʻīd ibn Daʻlaj	
U. 5			Unvala (no. 1260) wrongly attributes to Stickel (Handbuch, ii, p. 114, no. 71) the description of a coin of this year with the governor's name written in full. In reality Stickel's coin is an ordinary coin of this year with the name Sa'id (cf. note to ANS.19 above), but he incidentally mentions that the coin recorded by Fraehn in 1826 (Recensio, p. 4, no. 3), and overlooked by Mordtmann, had also the additional name of ibn Da'laj. Fraehn did not record the Pehlevi date because Olshausen had not as yet deciphered the legends. So that there is no proof that the coin in question was of this date. All the certified examples in fact are of the following year 126.		
			Year 126 = A.H. 161

				til (مقاتل)
T. 19			Thomas (J.R.A.S., 1871, pp. 458-9, no. 10, Pl. II, no. 15) has quite wrongly attributed to this year a coin dated 139 (similar to nos. 296-8 below). Unvala (no. 1274) has accepted this and has reconstructed from Thomas's modern Pehlevi script a supposititious transcription of the date (present) which is not the same as in Thomas's plate. In the same reprehensible manner he has grouped three fragments of coins in the Ermitage, Leningrad, and in Stockholm (nos. 1275-7) which have no trace of Muķātil's name but have a date that, according to his drawings, must be 129. He has concluded that they must be Muķātil's, solely on the basis of Thomas's coin afore-mentioned. I have no hesitation in stating that there is no coin of Muķātil as early as this year.	
			Year 133 = A.H. 168	
U. 6			Unvala (no. 1278) has read the date on the Copenh coin of Mukātil as of this year, whereas I have for an examination of a cast of this coin that really the common date 139, and have illustrated (Pl. XXXIX. 1) in order to demonstrate this (see b. C. 10). Østrup (no. 81) tentatively read it as 131, whereas was the opinion of Olshausen (op. cit., pp. 24-5) also Krafft (p. 12, no. 10).  The only other coins attributed to this year are so read by Unvala (nos. 1279-81). They are in Muracciole Collection, Teheran. None of them, unfunctedly, has been illustrated. The transcription of Pehlevi date as given by Unvala is as follows: which on the face of it certainly looks like sisiver (but the fact that an additional stroke would ma

			Year $141 = A.H. 176$	ne accuse on the margin
U. 14			The sole authority for this new variety is Unvala (nos. 1655-6). He states that he has seen two examples, the one in the Ermitage, Leningrad, and the other in the Muracciole Collection, Teheran. Unfortunately neither has been illustrated. According to his description the coins apparently are similar to the 'Abdallāh coins described above, with this remarkable exception, that instead of the Pehlevi legend in the third quarter of the margin there is an Arabic legend in Kufic script as follows:  — Unvala interprets this as Ibn 'Arīf, although from historical evidence one would expect 'Abdallāh's patronymic to be Ibn Ķaḥṭaba. The date is 141 ——————————————————————————————————

U. 17			Unvala (nos. 1677 and 1678) attributes to this year two coins, one in the American Numismatic Society, New York, and the other in his own collection now in the K. R. Cama Oriental Institute, Bombay. The latter I have not seen, and unfortunately an illustration has not been published of it. There is no such coin amongst my casts of coins in the American Numismatic Society, which I communicated to Unvala. These I have illustrated in Pl. XXVI. 7 and 8, neither of which can be read as Unvala has done. In the absence of corroborative evidence I therefore strongly suspect his reading of the date on the other specimen in Bombay.

			Year 129 = A.H. 164	
Zub. 6			The first published example of a coin of this type date is that in the Königsberg University Cabine scribed by Nesselmann (Die orientalischen Münzen, 1 no. 6). Mordtmann (Z.D.M.G., 1865, p. 475, no. has misquoted the reference to Nesselmann in which is followed by Unvala (no. 1683). The latter, how has come across another example (no. 1684) in the Zi Collection, Moscow. According to him it has the lowing details: (1) In place of the name-legend AF (2) margin as on I. 56 above; (3) date LUDEN NUVISTST; (4) pellet over second T of mint-name; (5) star l. and crescent r. of flames. The coin describy Markoff mentioned above (Mar. 4) closely resenthis in salient details—and no doubt is another spec of this somewhat rare year. No example has yet illustrated.

			Gold Co	rinage (?)
			Year?	. 9 A
U. 20 (Fig. 9a)			Unvala (p. 9, Pl.) has drawn attention to a coin of the AFZUT type struck in gold which was recently acquired from Baghdad by the Kaiser Friedrich Museum, Berlin It resembles the usual silver type described above, particularly nos. 305-7 above, in which the breast-ornament has coalesced into a star. I have not had an opportunity of examining the coin itself but, as in the case of other so-called gold issues of the Arab-Sassanian type, I confess I am sceptical of its genuineness. (See note to 186, p. 191.)	
			Copper C	loinage (?)
U. 21	네 나는 사람들이 되었다. 나는 가장이 하는 사람들이 가는 사람들은 사람들이 하는 사람들이 살아 살아 있다.		of the AFZUT type, which he 0, though not without some eculiarity of the date-legend, Personally I see no reason traightforward SNVT: i.e. 93, ich case it would have been Arab rule in Tabaristān. As 'l'existence d'une monnaie (i.e. under the Ispahbads) ible', this is begging the et we have actually described coins with AFZUT in place of early as A.H. 68. Unvalare of the existence of such cluded in his recent paper in

			B. 'Abbāsid Period <i>Tabaristān Type</i> Al-Raiy (الرضّ) <b>Governor uncertain</b>			
		Nuṣair ? (نصير)				
			Frg. 19 Year 168			
I. 58 (Fig. 19)		#R -85	Usual Sassanian bust, etc., as on the coins of the 'Abbāsid governors of Ṭabaristān (see above, p. 133 f.); breast-ornament .; name-legendin Pehlevi	Usual Sassanian fire-altar and attendants as on the Tabaristān coins; small star l. and r. of flames; legend in Arabic beginning on l. and finishing on the r. بالرب سنه ثمان وستين ومئة (i.e. in al-Raiy in the year 168).		

I. 58. Istanbul Museum (Catalogue, no. 46).

P. 3. 1. This coin was illustrated by Lane Poole in Facsimiles of Manuscripts and Inscriptions, ed. by W. Wright for the Palaeographical Society, London, 1875-83, Plate XXII. He interpreted the Arabic legend in the margin as a proper name, Khālid (اخاله scriptio defectiva for خاله). Epigraphically the interpretation I have offered above is more probable. (See also note to B. 1 below.) The word is the Arabic equivalent of the Pehlevi word معن معه AFD which first appeared on the coins of Khusrau II's eleventh year, and which is still found on the coins struck by the Arab Governors in Ṭabaristān. (See p. 130.) The Arabic writers on metrology distinguish a good (جاله); plural زيوف respectively.

P. 3. Th. 1. The only other recorded example of this mint and date is Mordtmann (Z.D.M.G., 1880, p. 160, no. 559), although he gave no indication of the presence of the unusual marginal legend. The coin was in his own cabinet.

P. 3. B. 1. The remarkable marginal legend was read by Nützel as حمد, i.e. 'Praise'. See note to no. 1 above. He also considered the mint uncertain.

P. 4. 3. The mint-signature of this coin has usually been interpreted as IZD = Yezd, e.g. Nützel, nos. 80-3. For reasons which are stated in the Introduction (Mint Notes) I prefer to read it now as sk (i.e. Sakastān = Sīstān). The epigraphy of the obverse marginal legend betrays the fact that the engraver was more familiar with Pehlevi than Kufic script, or alternatively that the old punches used in producing the Pehlevi characters on the die were utilized to represent the new Kufic script.

P. 5. I. 1. A similar mistake in attribution is made in the Izzet Bey Catalogue, pp. ٣-٤, nos. 1-3 bis, where coins of Khusrau II type said to be of the mint of Herāt (HRA) and dated 20 are credited with the remarkable Kufic marginal legend الله والحمد لله! In fact the whole fifteen Arab-Sassanian coins recorded in the Izzet Bey Catalogue are alike fantastically interpreted and

the descriptions are without scientific value.

P. 6. 11. This is the coin mentioned by Mordtmann (Z.D.M.G., 1850, p. 505; 1854, pp. 149-50, no. 748). Cf. Leitzmann, Numismatische Zeitung, 1850, p. 10. Mordtmann (ibid., 1850, p. 96, no. 3) mentioned one of this year with mint-signature no. 6 = AIRA, which he read as Hira. Cf. Tiesenhausen (Catalogue, no. 67). The coin was also in the Ismail Pasha Collection.

P. 6. ANS. 1. Mordtmann (Z.D.M.G., 1879, p. 84, no. 2) recorded a similar example in the Cabinet of Subhi Pasha. Amongst the recent acquisitions of the Istanbul Museum I have seen another with the date also written defectively as

here.

P. 6. 12. Amongst the recent acquisitions of the Istanbul Museum I have seen a specimen of this mint but with the date written correctly as on coin no. 11. This, in my opinion, is the earliest known specimen of the Muḥammadan coinage of Raiy. See Introduction (Mint Notes).

P. 6. B. 2. Cf. Mordtmann (Z.D.M.G., 1879, p. 84, no. 1) who read the mint-signature as wh = Bihkobad. There is a specimen in the Convent of the Flagellation, Jerusalem, on which the date is defectively written as on ANS. 1 above.

- P. 8. M. 5. Djevdet-Éfendi (J.A., 1862, p. 185) reported a coin in the Subhi Bey Collection of this date with the marginal legend بسم الله ربى. The mint-signature was read as Hertek. This interpretation is certainly wrong. Whatever the mint was, the coin was certainly of a later date judging by the marginal legend.
- P. 10. 14. Cf. Mordtmann (Z.D.M.G., 1865, p. 485, no. 68) and Nützel, no. 90. The example mentioned by Nesselmann (Die orientalischen Münzen, p. 11) of this year and mint is not Arab-Sassanian at all, although Mordtmann (Z.D.M.G., 1865, p. 464, no. 151) thought it was. The marginal legend is Pehlevi and not Kufic, and the coin is a regular issue of Khusrau II's thirtieth year.
- P. 10. ETN. 4. In the same collection there is another example but with margin partly obliterated and edge clipped, which came from the Michael Sale (Schulman, March, 1914, p. 28, no. 388). Mordtmann recorded another specimen in the cabinet of S. Alishan (Z.D.M.G., 1865, p. 464, no. 152) but wrongly equated the mint-signature with Damegan.
- P. 12. 18. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 282) = Mordtmann (Z.D.M.G., 1854, p. 150, no. 750). The mint-signature was, however, wrongly interpreted. Miles  $(op.\ cit.,\ p.\ 6,\ no.\ 5\ A)$  gives the correct identification, but whether the date is according to the Hijra, as he takes it, or according to the Yezdigird era is uncertain. See Introduction (Mint Notes).
- P. 13. 20. See Thomas (J.R.A.S., 1850, p. 282) and Mordtmann (Z.D.M.G., 1854, p. 150, no. 752; 1879, p. 85, no. 10). The latter suggested the mint Jundai Sābūr (Gondischapur) represented by zu.
- P. 15. I. 8. Mordtmann (Z.D.M.G., 1858, p. 49, no. 289) records one of this year in the Subhi Pasha Collection with apparently the mint-signature no. 43 = NH and the marginal legend  $\mu$  only. See Tiesenhausen, no. 81. The marginal legend on the coin recorded by Djevdet-Éfendi (in J.A., 1862, p. 185) of this year is certainly misread.
- P. 15. RB. 3. Mordtmann (Z.D.M.G., 1865, p. 464, no. 153) records a specimen in the Subhi Pasha Collection of this year and mint-signature, which he interpreted as ZD = Zadracarta. Apparently, however, he changed his mind in the interim, because in 1879 (Z.D.M.G., p. 85, no. 14) he classes it under Yezd (i.e. the old reading of mint-signature no. 52), in which case, if correctly attributed, it would be a variant of coin no. 21 above. There was, apparently, no gdh l. of Afzut in the obverse, and in place of the usual basmala as marginal legend there was a Kufic legend which Mordtmann quite mistakenly transcribed as all of i.e. Friend of Allah) and regarded as evidence of Shī'a influence. Miles (op. cit., p. 6, no. 6 B) has accepted this last deduction since he refers to 'Ali's appointment of a Raiy governor in A.H. 37. As for the era of the date see Introduction (Mint Notes). The coin in the Bibliothèque Nationale (Lavoix, no. 138) has been similarly misinterpreted. See P. 1, p. 15.
- P. 15. P. 1. Lavoix, like Mordtmann (see the note to RB. 3 above) misinterpreted the marginal legend and the mint-signature. The first letter of the

former has been reversed, and the additional letter in the word 411 is no doubt due to the use of Pehlevi punches in preparing the die.

- P. 16. ETN. 5. This was the date proposed by the late Howland Wood when he sent me the cast. Unfortunately the end of the date is none too clear. It is just possible that it should be read as 48 (cf. Catalogue, nos. 26-9). I have not seen the actual coin. Djevdet-Éfendi (J.A., 1862, p. 185) recorded a coin of this year with the same marginal legend.
- P. 17. I. 9. In Ghaleb Edhem's *Catalogue* (no. 5) this coin is dated 43. There is a close resemblance between the two dates in Pehlevi. Cf. note to B. 3 below.
- P. 18. ANS. 3. This is the actual specimen from the Michael Sale (Schulman, March, 1914, p. 28, no. 389) where it was dated 35 and the margin wrongly read as bismillāhi al-mahdi.
- P. 19. 23. = Thomas [J.R.A.S., 1850, p. 283(d)] = Tiesenhausen, no. 92. Cf. Nützel, no. 86, Pl. I, which has a pellet in the first quarter of the reverse margin. The coin described by Olshausen (Z.D.M.G., 1847, pp. 334-5) as of the year 27 is really the same as the foregoing.
- P. 19. 24. I have, however, seen a specimen with similar mint-signature and date in the Osman Arıdağ collection in Istanbul, which clearly shows the word in the third quarter which is missing from the above. This is similar to Nützel, no. 91, which is wrongly dated 37.
- P. 20. RB. 4. There is a specimen of this mint and date illustrated in the Copenhagen Catalogue (Østrup, no. 62, Pl. I), wt. 3-52 gr. The coin in Paris catalogued by Lavoix (no. 137) as having date illisible is almost certainly of this year. It is the same as no. 25, but has a triangle of dots above the star and crescent in the margin on the r.
- P. 20. ANS. 4. There is a specimen in the collection of the White Fathers at St. Anne's, Jerusalem, which has the date more complete н<u>sн</u>тўнь.
- P. 21. 29. Coins of this date are apt to be interpreted as of the year 28 or 38. See above, p. 8.
  - P. 21. 30. Cf. Nützel, nos. 87-8; Num. Circ., 1935, col. 433.
  - P. 21. 32. This is no doubt the coin known to Thomas (J.R.A.S., 1850,
- p. 282) although his reading of the mint-signature was wrong.
  P. 21. 34. The specimen in the Berlin Cabinet (Nützel, no. 89) has the date
- written = PNJA. This is the coin recorded by Mordtmann (Z.D.M.G., 1879, p. 86, no. 20) where it is wrongly attributed by him to the Mint of Basra (BJRA). In the Osman Aridağ collection in Istanbul I saw an example with pellets in the margin, thus:
- P. 22. Th. 3. The style of this and the following coin bears a close resemblance to that of Th. 2 described above, the date of which I have read as 45.
- P. 23. I. 11. This coin, part of an unpublished hoard, I was privileged to examine in the Istanbul Cabinet. This is the first recorded example of such a reverse marginal legend. Unfortunately I have been unable to illustrate the coin.
- P. 23. N. 1. See note DD. 1 below. There is a similar example in the Istanbul Museum (Recent Acquisitions).
- P. 23. DD. 1. This remarkable coin was first published by the writer in Num. Chron., 1934, pp. 292-4, Pl. IX, no. 6.

P. 6. B. 2. Cf. Mordtmann (Z.D.M.G., 1879, p. 84, no. 1) who read the mint-signature as WH = Bihkobad. There is a specimen in the Convent of the Flagellation, Jerusalem, on which the date is defectively written as on ANS. 1 above.

- P. 8. M. 5. Djevdet-Éfendi (J.A., 1862, p. 185) reported a coin in the Subhi Bey Collection of this date with the marginal legend بسم الله ربى. The mint-signature was read as Hertek. This interpretation is certainly wrong. Whatever the mint was, the coin was certainly of a later date judging by the marginal legend.
- P. 10. 14. Cf. Mordtmann (Z.D.M.G., 1865, p. 485, no. 68) and Nützel, no. 90. The example mentioned by Nesselmann (Die orientalischen Münzen, p. 11) of this year and mint is not Arab-Sassanian at all, although Mordtmann (Z.D.M.G., 1865, p. 464, no. 151) thought it was. The marginal legend is Pehlevi and not Kufic, and the coin is a regular issue of Khusrau II's thirtieth year.
- P. 10. ETN. 4. In the same collection there is another example but with margin partly obliterated and edge clipped, which came from the Michael Sale (Schulman, March, 1914, p. 28, no. 388). Mordtmann recorded another specimen in the cabinet of S. Alishan (Z.D.M.G., 1865, p. 464, no. 152) but wrongly equated the mint-signature with Damegan.
- P. 12. 18. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 282) = Mordtmann (Z.D.M.G., 1854, p. 150, no. 750). The mint-signature was, however, wrongly interpreted. Miles  $(op.\ cit.,\ p.\ 6,\ no.\ 5\ A)$  gives the correct identification, but whether the date is according to the Hijra, as he takes it, or according to the Yezdigird era is uncertain. See Introduction (Mint Notes).
- P. 13. 20. See Thomas (J.R.A.S., 1850, p. 282) and Mordtmann (Z.D.M.G., 1854, p. 150, no. 752; 1879, p. 85, no. 10). The latter suggested the mint Jundai Sābūr (Gondischapur) represented by zu.
- P. 15. I. 8. Mordtmann (Z.D.M.G., 1858, p. 49, no. 289) records one of this year in the Subhi Pasha Collection with apparently the mint-signature no. 43 = NH and the marginal legend U only. See Tiesenhausen, no. 81. The marginal legend on the coin recorded by Djevdet-Éfendi (in J.A., 1862, p. 185) of this year is certainly misread.
- P. 15. RB. 3. Mordtmann (Z.D.M.G., 1865, p. 464, no. 153) records a specimen in the Subhi Pasha Collection of this year and mint-signature, which he interpreted as ZD = Zadracarta. Apparently, however, he changed his mind in the interim, because in 1879 (Z.D.M.G., p. 85, no. 14) he classes it under Yezd (i.e. the old reading of mint-signature no. 52), in which case, if correctly attributed, it would be a variant of coin no. 21 above. There was, apparently, no gdh l. of Afzut in the obverse, and in place of the usual basmala as marginal legend there was a Kufic legend which Mordtmann quite mistakenly transcribed as as a Kufic legend which Mordtmann quite mistakenly transcribed as (i.e. Friend of Allah) and regarded as evidence of Shī'a influence. Miles (op. cit., p. 6, no. 6 B) has accepted this last deduction since he refers to 'Ali's appointment of a Raiy governor in A.H. 37. As for the era of the date see Introduction (Mint Notes). The coin in the Bibliothèque Nationale (Lavoix, no. 138) has been similarly misinterpreted. See P. 1, p. 15.
- P. 15. P. 1. Lavoix, like Mordtmann (see the note to RB. 3 above) misinterpreted the marginal legend and the mint-signature. The first letter of the

former has been reversed, and the additional letter in the word 401 is no doubt due to the use of Pehlevi punches in preparing the die.

- P. 16. ETN. 5. This was the date proposed by the late Howland Wood when he sent me the cast. Unfortunately the end of the date is none too clear. It is just possible that it should be read as 48 (cf. Catalogue, nos. 26-9). I have not seen the actual coin. Djevdet-Éfendi (J.A., 1862, p. 185) recorded a coin of this year with the same marginal legend.
- P. 17. I. 9. In Ghaleb Edhem's *Catalogue* (no. 5) this coin is dated 43. There is a close resemblance between the two dates in Pehlevi. Cf. note to B. 3 below.
- P. 18. ANS. 3. This is the actual specimen from the Michael Sale (Schulman, March, 1914, p. 28, no. 389) where it was dated 35 and the margin wrongly read as bismillāhi al-mahdi.
- P. 19. 23. = Thomas [J.R.A.S., 1850, p. 283 (d)] = Tiesenhausen, no. 92. Cf. Nützel, no. 86, Pl. I, which has a pellet in the first quarter of the reverse margin. The coin described by Olshausen (Z.D.M.G., 1847, pp. 334-5) as of the year 27 is really the same as the foregoing.
- P. 19. 24. I have, however, seen a specimen with similar mint-signature and date in the Osman Arıdağ collection in Istanbul, which clearly shows the word in the third quarter which is missing from the above. This is similar to Nützel, no. 91, which is wrongly dated 37.
- P. 20. RB. 4. There is a specimen of this mint and date illustrated in the Copenhagen Catalogue (Østrup, no. 62, Pl. I), wt. 3.52 gr. The coin in Paris catalogued by Lavoix (no. 137) as having date illisible is almost certainly of this year. It is the same as no. 25, but has a triangle of dots above the star and crescent in the margin on the r.
- P. 20. ANS. 4. There is a specimen in the collection of the White Fathers at St. Anne's, Jerusalem, which has the date more complete HSH TJHL.
- P. 21. 29. Coins of this date are apt to be interpreted as of the year 28 or 38. See above, p. 8.

P. 21. 30. Cf. Nützel, nos. 87-8; Num. Circ., 1935, col. 433.

P. 21. 32. This is no doubt the coin known to Thomas (J.R.A.S., 1850, p. 282) although his reading of the mint-signature was wrong.

P. 21. 34. The specimen in the Berlin Cabinet (Nützel, no. 89) has the date written Prija. This is the coin recorded by Mordtmann (Z.D.M.G., 1879, p. 86, no. 20) where it is wrongly attributed by him to the Mint of Başra (Bığra). In the Osman Arıdağ collection in Istanbul I saw an example with pellets in the margin, thus:

P. 22. Th. 3. The style of this and the following coin bears a close resemblance to that of Th. 2 described above, the date of which I have read as 45.

P. 23. I. 11. This coin, part of an unpublished hoard, I was privileged to examine in the Istanbul Cabinet. This is the first recorded example of such a reverse marginal legend. Unfortunately I have been unable to illustrate the coin.

P. 23. N. 1. See note DD. 1 below. There is a similar example in the Istanbul Museum (Recent Acquisitions).

P. 23. DD. 1. This remarkable coin was first published by the writer in Num. Chron., 1934, pp. 292-4, Pl. IX, no. 6.

- P. 24. I. 12. This is the first example to be published with the name of Hormuzd IV and with Arabic legends demonstrating that it was struck during the Muḥammadan period. The unusual head-dress of the attendants is not only paralleled on the prototype  $\gamma$  (p. 2) but is also to be seen on the coins of the Ispahbads of Tabaristān described on p. 130. See also B. 39, p. 124, and note p. 201; also note p. 131 c. at end.
- P. 25. Zub. 1. This remarkable coin was first published by Nützel (*Trudy Moskowskago Numismaticheskago Obshchestwa*, iii, pp. 156-9, Pl. V, 1. Coins with Arab-Byzantine obverses and Pehlevi legends such as those which have been recently published by Unvala (*Num. Chron.*, 1937, pp. 287-92) will be included in a subsequent volume dealing with Muḥammadan Coins of Arab-Byzantine type.
- P. 25. 35. De Morgan (Rev. Num., 1907, pp. 86-7) describes another example in his own collection which he dates as 43 but which is really as the above. The coin described by Markoff (Catalogue des monnaies arsacides, &c., p. 129, no. 47) as reading Mu'āwiya ibn Abī Sufyān in Pehlevi ought to be ascribed to Mu'āwiya's brother Ziyād (see no. 58, p. 40).
- P. 26. B. 3. The first—and for a long time the only—known coin bearing the name of the Caliph Muʻāwiya was that published by Soret (Lettre à M. Olshausen, p. 8) in 1846. See Olshausen (Z.D.M.G., 1847, p. 334). This coin passed into the Jena cabinet (see Stickel, Handbuch, ii, pp. 85–6, no. 41). Mordtmann also mentioned it (Z.D.M.G., 1850, p. 506, no. 2; 1854, p. 156, no. 786) and Tiesenhausen (no. 25). In each case the date was read as sɔhl, i.e. 43, as in the case also of the Berlin specimen, instead of as yaıhl = 41. The same facile mistake is to be found in Müller (Der Islam im Morgen- und Abendland, i, p. 349). His reproduction and interpretation are repeated by K. A. C. Creswell in his Early Muslim Architecture, I, p. 95.
- P. 27. 37. This is the coin published by Thomas (J.R.A.S., 1850, p. 319, no. 65, Pl. III, fig. xxiv=Mordtmann, Z.D.M.G., 1854, p. 167, no. 849). By a printer's error the weight was given as 74.5 grs. See Thomas's additional remarks on the coin in J.R.A.S., 1852, pp. 412 ff. A complete specimen of the same mint is illustrated by Thomas (J.R.A.S., 1871, Pl. I, no. 7=Mordtmann, Z.D.M.G., 1879, p. 89, no. 32) where the date is clearly engraved on his plate as HFTAT=70, although in other respects it is the same as the coin described above and dated 73. As can be seen from Pl. V. 4 the British Museum coin has the Pehlevi digit  $\omega = sI$  usurping the place of the fillet which normally rises from the right shoulder of the attendant on the left of the altar. It is just possible that the engraver of the coin illustrated by Thomas was misled by this and drew the digit as the missing fillet. A photograph would have decided the matter. The coin in question was in the J. R. Steuart collection but its present whereabouts is unknown to me.
- P. 28. C. 3. Tornberg (Symbolae, iii, p. 24, no. 62, Pl. I, no. 3) published a coin of this mint and date in 1856. See also Dorn (Mélanges, ii, p. 260) and Tiesenhausen (no. 135). The date on Tornberg's plate was engraved as which is a defective form of SHST:=60. Mordtmann (Z.D.M.G., 1864, p. 473, no. 164) recorded an example in the Alishan Collection. In this case the date was given as Collection, I observed another specimen in the Osman Aridag Collection, Istanbul. The coin ascribed to 'Abd al-Malik of this mint and date in the

Istanbul Museum (Catalogue, no. 16) is actually one of 'Abdallah ibn al-Zubair as Amīr (see no. 47, p. 35). The difficulty that troubled Tornberg in connexion with the date is resolved by equating it in terms of the Yezdigird era which was commonly in use at the Dārābjird mint.

- P. 28. Asc. 1. The unusual mint-signature may be the same as the one mentioned, but not reproduced, by Mordtmann (Z.D.M.G., 1879, p. 89, no. 31) and read by him as DARAB.
- P. 28. P. 2. Lavoix, however, considered it a Hijra date. Mordtmann (Z.D.M.G., 1879, p. 89, no. 31) recorded a coin in his own cabinet of this mint and date. Apparently the mint-signature was DARAB; but as it was not illustrated it is impossible to be certain of its form. It might have been similar to the one recorded by Ascoli mentioned above (Asc. 1).
- P. 29. Cam. 1. This is the coin from the Masson Collection described by Thomas (J.R.A.S., 1850, p. 312, no. 45 = Mordtmann, Z.D.M.G., 1854, p. 167,no. 850 = Tiesenhausen, no. 233). It is here reproduced for the first time by kind permission of the authorities of the Fitzwilliam Museum.

Dorn (Mélanges Asiatiques, ii, p. 261) mentions a coin of 'Abd al-Malik in the Ermitage Museum dated 75 but he gives no further particulars as to mint or name-legend.

- P. 30. B. 4. There is a coin obviously of this governor and of this mint and date illustrated in Tornberg's Symbolae, iii, pp. 24-5, no. 63, Pl. I. 2 = Tiesenhausen, no. 184. Tornberg completely misinterpreted the legends.
- P. 30. 38. (ex Masson = Thomas, J.R.A.S., 1850, p. 317, no. 56, Pl. III, fig. xvii.)
- P. 30. Z. 1. This is the same coin illustrated in the Michael Sale Catalogue (Schulman, March, 1914, p. 28, no. 392, Pl. I).
- P. 31. B. 5. This is the coin described by Thomas (J.R.A.S., 1850, p. 297, no. 24, Pl. II, fig. iv) when it was in the General Fox Collection = Mordtmann, Z.D.M.G., 1854, pp. 160-1, no. 806. Nützel has wrongly read the date as SHST=60 and taken it as a date in the Yezdigird era.

P. 31. J. 1. The coin recorded by Bartholomaei (Revue de la Numismatique Belge, 1864, p. 327, fig. 25) is apparently a similar example though the date is mistakenly given as 97. Only the Pehlevi legend in the margin, however, is

reproduced.

- ANS. 7, 8. There is an example in the Istanbul Museum which has the P. 33. date clearly as on ANS. 7. Thomas (J.R.A.S., 1852, p. 412) published one in his own collection. A specimen of this mint and date was in the Strauss Sale (Schulman, Jan., 1913, p. 62, no. 993). It is certain that the coin described by Markoff (Cat. des monnaies arsacides, &c., p. 128, no. 45) has a date legend similar to the above, and cannot possibly be read as DVAJPNJA i.e. 52 as he has done. Mordtmann (Z.D.M.G., 1865, p. 472, no. 161) described an example of the same mint and date. The coins ascribed by Thomas (J.R.A.S., 1850, p. 316) and Nützel (Cat., no. 146) to this year ought to be dated 54. See nos. 42 and 43 below.
- P. 33. 42. Cf. Berlin Museum Catalogue, no. 146, where the date is =ўнриўан, though Nützel read it as 53.
- P. 34. 43. = Thomas, J.R.A.S., 1850, p. 316, no. 53, Pl. III, fig. xv = Mordtmann, Z.D.M.G., 1854, p. 160, no. 803. The latter read the date correctly as 54.

P. 34. 44. The date on the Berlin specimen (Nützel, no. 147) appears to approximate to this one.

P. 35. 46. In the Strauss Sale (Schulman, Jan., 1913, p. 62, no. 995) another example is recorded, but the reverse marginal legend is wrongly interpreted as the Arabic & lillāh. Cf. Mordtmann, Z.D.M.G., 1879, p. 88, no. 26.

P. 35. Th. 6. Cf. Mordtmann, Z.D.M.G., 1848, pp. 111-12; 1854, p. 160, no. 804, Pl. IX, no. 33; 1879, p. 88, no. 27. He also records (*ibid.*, 1879, p. 89, no. 29) a specimen in his own collection which had the  $\varphi$  r. of the fire-altar.

- P. 35. 47. This is similar to the coin described by Mordtmann (Z.D.M.G., 1879, p. 89, no. 28) in the von Prokesch-Osten Collection. Of three coins of this mint and date in the Istanbul Museum one is as the above, while the other two have date as the mint-signature. These latter are nos. 16 and 17 of the Catalogue of Ghalib Edhem who, however, attributed them in error to 'Abd al-Malik ibn Marwān. In the Kaiser Friedrich Museum, Berlin (Nützel, nos. 148-9), are two specimens, one with date and one as above. Djevdet-Éfendi (in J.A., 1862, p. 185) also recorded one of this year which he wrongly regarded as in terms of the Hijra. There is one of this date in the Bibliothèque Nationale (Lavoix, no. 144) which has been wrongly attributed to 62 (A.H.).
- P. 35. 48. There is a similar specimen in the Philip Thorburn Collection, London. In the Strauss Sale (Schulman, Jan., 1913, p. 62, no. 994) a coin of this mint dated 57 is mentioned. In the absence of corroborative evidence, however, I am inclined to regard this as a mistake for 67, especially as the marginal legend tallies with the above.
- P. 36. 49. Thomas (J.R.A.S., 1850, p. 316, no. 55, Pl. III, fig. xv/4) recorded a similar specimen, with countermark no. 39, in the collection of Gen. Fox, which is now in Berlin (Nützel, no. 144). Cf. Mordtmann, Z.D.M.G., 1879, p. 89, no. 30, where the mint-signature is interpreted as Adharbaijān, though in his previous paper (ibid., 1854, p. 161, no. 807) it was correctly equated with Iṣṭakhr (Persepolis).
- P. 37. Z. 3. Cf. above the coins of this mint and date with the name of Khusrau II, p. 21. I have seen another example of this year and mint in an uncatalogued collection in the Istanbul Museum.
- P. 37. B. 7. In the Ethnographical Museum, Ankara, there is a similar specimen with the date in this form. Nützel, however, read this date form as yajpnja (אֹנְפוֹנָא).
- P. 37. ETN. 6. In the Convent of St. Anne, Jerusalem, I have seen a similar specimen with this spelling of the date, and I have also seen another example in an unpublished collection in the Istanbul Museum. This is the spelling on the coin mentioned by Thomas (J.R.A.S., 1850, p. 287, no. 1) which he transliterated

P. 38. ANS. 9. See Tiesenhausen, no. 103 = Dorn, Mélanges, ii, p. 260,

no. 10.

P. 38. 54. See Thomas (J.R.A.S., 1850, p. 288, no. 2) and Stickel (Handbuch, ii, pp. 87-8, no. 43).

P. 39. B. 8. Mordtmann (Z.D.M.G., 1879, p. 91, no. 39) records a variant with the governor's name truncated thus: ziyat-i/abusuf (sic). Examples were in the Subhi Pasha Collection and in his own cabinet.

P. 39. 56. If the traditional date of Ziyād's death is accepted these are post-humous coins.

P. 40. CAM. 2. This is the same as the coin published by Thomas (J.R.A.S., 1850, p. 288, no. 6), who, however, only illustrated the mint, date, and namelegend (Pl. II, fig. I). There is a specimen in the Istanbul Museum. In the Osman Arıdağ Collection, Istanbul, I found another on which the hair at the back of the head has become and the date is defectively written as PN(J)PNJA. These must be considered posthumous issues if the traditional date of Ziyād's death (A.H. 53) be correct.

P. 41. 59. = Thomas (J.R.A.S., 1850, p. 315, no. 51) where the date was read as 43 (SIJHL), wrongly in my opinion. So Mordtmann (Z.D.M.G., 1854,

p. 152, no. 763) and Tiesenhausen (no. 86). See note to 60 below.

P. 41. 60. A similar specimen but with ear-ring as on no. 58 is illustrated in v. Schrötter's Wörterbuch der Münzkunde, Pl. 25, no. 408, although the date is wrongly read (p. 776) as 43 A.H.

P. 41. B. 9. Nützel read the date as 43 (sjhl) and (on p. 382) equated it with the Hijra era. There is an example in the Ashmolean Museum, Oxford,

which has the name-legend written in a somewhat angular script.

P. 41. 61. The coin in the Kaiser Friedrich Museum, Berlin, ascribed by Nützel (no. 97) to this date is really the same date as no. 58 above, which I regard as being dated 41. See note to B. 9 above. The coin of this date and mint from the cabinet of S. Alishan recorded by Mordtmann (Z.D.M.G., 1865, p. 465, no. 155) as having the name-legend ziat-i-abuahan i.e. Ziyād son of his father (غيادين) can only be regarded as a misreading of an imperfectly engraved legend. Ziyād's disputed paternity is most unlikely to have been so flagrantly proclaimed on an official issue from a mint under his control. See Introduction (Biographical Sketches).

P. 42. ETN. 7. Mordtmann (Z.D.M.G., 1858, p. 50, no. 294 = Tiesenhausen, no. 102) mentions a unique coin of this date, unfortunately not illustrated, on

which he asserts that in place of the mint-signature there is the name of ZIYAT. I suspect that the coin in question was similar to ETN. 7, or to no. 66, and that Mordtmann misinterpreted the rare mint-signature as the name of the Governor repeated on the reverse (Z.D.M.G., 1879, p. 90), a most improbable happening. The coin was in the Subhi Pasha Collection.

- P. 42. I. 16. There was another specimen in the Strauss Sale (Schulman, Jan., 1913, p. 62, no. 998) where the mint-signature was read as NI(SA).
- P. 42. 62. A similar coin in the collection of Dr. I. Pietraszewski was the subject of Olshausen's article in Koehne's Zeitschrift für Münz-, Siegel- und Wappenkunde, vol. iv (1844), pp. 367-71, Pl. XI. 2. The same coin is drawn on the front page of L.-L. Sawaszkiewicz: Le Génie de l'Orient, Brussels, 1846. Cf. Mordtmann (Z.D.M.G., 1854, p. 153, no. 766) where the mint-signature is read as NI(SA). An unclipped specimen in the Philip Thorburn Collection, London, weighs 60 gr. (3-88 grm.).
- P. 42. C. 5. In the Copenhagen Catalogue it has been wrongly dated 52 and the mint-signature has been interpreted as NI(SA). Previous to my obtaining a cast of the above coin the sole authority for this date was Thomas (J.R.A.S., 1850, p. 288, no. 4). His specimen, unfortunately not reproduced, was in the Stokes Collection.
  - P. 42. O. 1. Cf. the date on STA. 1 and O. 2, p. 43.
- P. 43. 64. This is the coin mentioned by Mordtmann (Z.D.M.G., 1854, p. 152, no. 765).
- P. 43. I. 17. Dorn mentioned an example of this mint-signature and date in his *Mélanges Asiatiques* (iii, p. 628, no. b = Tiesenhausen, no. 112).
- P. 43. STA. 1. Apparently this is similar to the coin recorded by Mordtmann (Z.D.M.G., 1880, p. 161, no. 562) in the Collection of Dr. Hartmann of Beirut, although it is not illustrated and is dated by him year 30. See Introduction (Mint Notes).
  - P. 43. O. 2. Cf. the date on O. 1 above.
- P. 44. I. 19. I am far from satisfied with my suggested explanation of the date legend; cf. no. I. 20, p. 44.
  - P. 44. I. 20. See M. 24, p. 44.
- P. 44. ETN. 8. This may be regarded as a posthumous coin if the traditional date of Ziyād's death be correct.
- P. 44. Dam. 1. The only feasible explanation of this remarkable date is that an old reverse die of a Sassanian coin has been re-used many years afterwards under the Arabs.
- P. 45. 65. Mordtmann (Z.D.M.G., 1879, p. 90, no. 36) recorded a similar example in the Subhi Pasha Collection. Another specimen in the Windisch-Grätz Collection (Zambaur, p. 9, no. 5) weighed 4-05 grm. (62-5 gr.).
- P. 45. I. 21. Mordtmann (Z.D.M.G., 1879, p. 91, no. 37) mentioned one in the Subhi Pasha Collection.
- P. 45. ETN. 9. There is another example in the Convent of St. Anne, Jerusalem.
- P. 45. 66. This mint-signature which is exceedingly rare, if not unique, is not found to my knowledge in the regular Sassanian series, and I suspect that it may possibly be a variant due to defective engraving with punches of the mint-

signature no. 23 (cf. ETN. 7). There is a close resemblance in style between the two coins.

- P. 46. M. 26. Mordtmann gave the date as SIJHL (i.e. 43) but I am inclined to regard this as the usual misinterpretation of the year 41. The coin tallies, so far as mint, date, and additional pellets are concerned, with the coins already described under Mu'āwiya (nos. 35 ff.) and Ziyād ibn Abī Sufyān (nos. 58 ff.) and those of 'Abdallāh ibn 'Āmir described p. 48 (nos. 70 ff.). The coin in the Kaiser Friedrich Museum, Berlin, of an uncertain governor mentioned by Nützel (no. 98) is almost certainly one of Samura's of the same mint and date. See also Introduction (Biographical Sketches).
- P. 46. Sch. 2. The coin in question was not properly attributed in the Catalogue, but judging from the illustration on Pl. I it certainly bore the name of Samura as described above. According to the Plate reference numbers only the obverse would appear to be illustrated, but strange to say the reverse of coin no. 2054 on the same plate agrees exactly with the reverse of the Samura coin described by Mordtmann. I have therefore no hesitation in deducing, on other grounds as well (see note to Th. 7 below), that the reverse in question has been transposed. I have restored the two in the illustration (fig. 3).

The obverse only of the same Samura dirham is illustrated also in E. Martinori: La Moneta: Vocabolario Generale, Rome, 1915, p. 112, but wrongly attributed to Khusrau III (591-628) [sic].

- P. 47. 67. Another specimen from his own cabinet is recorded by Mordtmann (Z.D.M.G., 1879, p. 98, no. 75) though he interpreted the mint-signature as UT.
- P. 47. 68. There is a similar specimen of this year and mint in the Istanbul Museum.
- P. 47. 69. There is also one in the Istanbul Museum with this transposed obverse name-legend, but with the date correctly written as on no. 68 above. I also noted an example in the Arab Museum, Damascus, on which the date was defectively written as with i.e. Jhirjhl (sic).
- P. 48. Th. 7. Another example of this type I have noted in the Arab Museum, Damascus. In the White King Sale (Schulman, June, 1905, no. 2054) a coin of this governor, wrongly ascribed to Mu'āwiya, is illustrated (Pl. I) with a reverse of this mint and date. The obverse is exactly like no. 69, p. 47, of the mint of BISH(āpūr) while the reverse tallies with the reverse of a coin of Samura ibn Jundab recorded by Mordtmann (see M. 26, p. 47). Moreover, a measurement of the diameters by means of a micrometer reveals the fact that the two sides cannot possibly belong to the same coin. The most natural deduction to make is that the reverse of the Samura coin (no. 2051) has been inadvertently allocated to the obverse of the coin of 'Abdallāh ibn 'Āmir (no. 2054). I have restored it to its proper context above (p. 46). See note to Sch. 2 above.
- P. 48. 72. There is an example of the same mint and date in the Philip Thorburn Collection, London.
- P. 50. 74. There is also a clear specimen in the American Numismatic Society, New York.
- P. 51. B. 10. In the Berlin Catalogue this date is read as YAJSI i.e. 31, which it closely resembles. Cf. note to SHM. 1 below.

P. 52. SHM. 1. This coin, part of a find, is illustrated in an article by Ulla S. Linder in the Nordisk Numismatisk Årsskrift, 1938, fig. 2, p. 116. Unfortunately (on p. 110) the date is wrongly read as siš-sih, 33 (cf. note to B. 10 above), and the name-legend is mistaken as that of Khusrau II on the authority of no less a person than Professor Nyberg (namnets skrivning högst sällsam och singulär)!

P. 52. 75. This unique coin was first published by the writer in Num.

Chron., 1935, p. 249.

P. 53. I. 23. Mordtmann (Z.D.M.G., 1879, p. 93, no. 43) recorded a similar specimen in his own collection.

P. 54. J. 2. Mordtmann (Z.D.M.G., 1879, p. 95, no. 65) quotes this coin, but prefers to read the date as 64. I have also noted another example of this same mint and date in the Istanbul Museum.

P. 54. B. 11. There are two specimens of this coin in the Istanbul Museum.

- P. 54. I. 26. Mordtmann ( $Z.\overline{D.M.G.}$ , p. 95, no. 64) recorded another example, in the Subhi Pasha Collection.
- P. 54. ETN. 11. In the E. E. Oliver Sale (Schulman, Nov., 1907, no. 731, Pl.) the obverse of a coin similar to this is illustrated (with countermarks) though it is wrongly attributed to 'Ubaidallah's brother Salm. It was said to be of this mint-signature (interpreted as Baba district de Merv) and dated 60, but as the reverse is not reproduced it is impossible to vouch for this reading.
  - P. 55. B. 12. = Mordtmann (Z.D.M.G., 1879, p. 94, no. 55).
- P. 58. 80. There was a specimen of this mint and date in the Davis Collection, Baghdad (now dispersed), on which there was a small star r. and small crescent l. of flames respectively on the reverse. The coin measured 1.25; and weighed 61.9 gr. (4.01 grm.). Lavoix, no. 139, is of the same mint and date; weight 3.94 though it is pièce fragmentée. Cf. Nützel, no. 103. See above M. 36.
- P. 58. 82. Cf. Mordtmann (Z.D.M.G., 1854, p. 155, no. 778; *ibid.*, 1865, p. 485, no. 70). In the former case the date is given as NUPNJA, but this is only Mordtmann's reconstruction of the date as reported by Thomas (J.R.A.S., 1850, p. 291) who merely refers to a specimen in the British Museum and another in the Masson Collection of this date without reproducing the Pehlevi form employed. Neither no. 81 nor 82 can be the particular coin quoted by Thomas.

Examples similar to no. 82 exist in the Fitzwilliam Museum, Cambridge, in the Convent of the Flagellation, Jerusalem, and in the Arab Museum, Damascus. The second is the one briefly noted by Père Paulin Lemaire in Num.

Chron., 1938, p. 295.

P. 58. 83. A coin in the Copenhagen Museum (no. 64) is like this. It weighs 2.70 grm. (41.7 gr.). It is clipped.

- P. 59. RB. 8. The specimen in the Kaiser Friedrich Museum, Berlin (Nützel, no. 104, Pl. II) is similar to this, only in addition it has countermark no. 11 in first quarter.
- P. 59. 86. The specimen mentioned by Père Paulin Lemaire (Num. Chron., 1938, p. 295) in the Convent of the Flagellation, Jerusalem, is like the above. I also noticed two other specimens of this date in the Osman Arıdağ Collection in Istanbul. One of them had the date somewhat truncated at the end so that it looked like 31 (see above, O. 3, Pl. XL. 3). There are two other specimens in the American Numismatic Society, New York, but each has been badly

clipped. There are two in the Fitzwilliam Museum, Cambridge, one of which is cut. One of these may be the coin from the Masson Collection which Thomas read as of the year 68. The coins in the Berlin Museum (Nützel, nos. 106 and 107) and in the Bibliothèque Nationale (Lavoix, no. 141) ought really to be dated 61 and not 68. See T. 8, p. 60.

P. 59. 87. There is a clearer specimen in the E. T. Newell Collection, New York. There was a clipped specimen in the Windisch-Grätz Collection (vol. VII. i, by E. v. Zambaur, no. 6).

P. 60. Ox. 3. Cf. date on B. 17, p. 70. There is a possibility that the digit may be for two (DU), cf. the syllable DU in the governor's name on P. 4, p. 64.

P. 60. B. 13. There is one like this in the Fitzwilliam Museum, Cambridge (Tremlett Bequest).

P. 60. O. 5. Previous to my seeing this coin the only record I had of an example of this mint and date was the statement of Thomas (J.R.A.S., 1850, p. 291) in which he mentioned a rare example in the Masson Collection. Unfortunately it was not reproduced or even described. It may be the coin now in the Fitzwilliam Museum, Cambridge. See Cam. 4, p. 60.

P. 61. 89. I am strongly inclined to regard this mint-signature as a variant of that of BJRA (Basra) because of the resemblance not only in workmanship but also in such details as the :: after the will in the margin and the breast-ornament so, but even more so the unusual form of the ear-ring ...

P. 62. Cam. 5. This is apparently the coin recorded by Thomas (J.R.A.S., 1850, p. 290, no. 8) from the Masson Collection. According to him it weighed 58.0 gr. (3.75 grm.). He regarded the date SHSHVIST (26) as a mistake for SHSHSHST (66). Mordtmann, however (Z.D.M.G., 1854, p. 154, no. 772) accepted the earlier date and explained it in terms of the so-called Tabaristān era (Z.D.M.G., 1879, p. 96), or, as I prefer to call it, the Post-Yezdigird era. This agrees with the historical data.

P. 63. 90. Thomas published this coin (in J.R.A.S., 1850, p. 290, no. 7 = Tiesenhausen, no. 89) but failed to note the unusual spelling of the Governor's name. There is also a similar example in the Istanbul Museum (Recent Acquisitions).

P. 63. B. 15. There is a coin of this mint ascribed to this date by Karabacek (in Wiener Numismatische Monatshefte, 1865, p. 67, Pl. 2, no. 4), but the engraving of the date is not too convincing. The coin is as B. 14, p. 62, with the following differences: obv. small crescent and pellet over l. shoulder; rev. small star r. and small crescent l. of flames, and in the margin 2. The weight is given as 58.9 gr. (3.82 grm.).

P. 63. O. 6. Mordtmann (Z.D.M.G., 1879, p. 93, no. 44) recorded a coin in his own collection of this mint and date, but unfortunately he did not illustrate it, though he stated that the marginal legend was  $\mathfrak{p}:M$  which if correct is a

variant of the above.

P. 63. I. 30. A similar coin was mentioned by Mordtmann (Z.D.M.G., 1879, p. 93, no. 45) as being in his own cabinet, but it was not illustrated.

P. 63. 91. I have seen a similar specimen in the Istanbul Museum (Recent Acquisitions) with the date thus:

P. 64. P. 4. Lavoix did not observe the change in the spelling of the

4.00

Governor's name. Another example is said to have been in the Johnston Sale (Sotheby, 16 July, 1906, p. 13).

- P. 64. 92. Three coins of this year with this mint-signature are in the Berlin Museum (Nützel, nos. 112-14), but they are wrongly attributed to Yezd.
- P. 64. 93. There is a better specimen, unclipped, of this variety in the Philip Thorburn Collection, London. It weighs 62.8 gr. (4.07 grm.).
- P. 65. 95. ex Masson Collection = Thomas, J.R.A.S., 1850, p. 291, no. 13. The same coin is illustrated in Wilson's Ariana Antiqua, 1841, Pl. XVII, no. 3. Mordtmann (Z.D.M.G., 1854, p. 155, no. 779) read the mint-signature as KRMANSF. See also Olshausen (Die Pehlew's-Legenden, 1843, pp. 53-6).
- P. 66. I. 32. Mordtmann (Z.D.M.G., 1879, p. 95, no. 68) described a similar coin in his own collection which, however, he dated as 69 (NAVSHST), and which would have made it a posthumous issue since 'Ubaidallāh was killed in A.H. 67. It weighed 55.6 gr. (3.6 grm.). Unfortunately it was not illustrated. The unusual Pehlevi epithet added to the governor's name means 'Victorious'.
- P. 66. 97. This is the coin recorded by Mordtmann (Z.D.M.G., 1850, p. 507, no. 10; 1854, p. 155, no. 781) who was also unable to decipher the Pehlevi legends in the first and third quarters. The extremely worn condition of the coin, particularly the obverse, renders it practically impossible to illustrate.
  - P. 68. I. 35. Cf. the coins of AIRAN, p. 52 f. See Introduction (Mint Notes).
- P. 68. 99. Cf. Dorn's example (Mélanges, viii, p. 276), Nützel, no. 117, and Ascoli, pp. 71-2, Pls. I and II, no. 10 where, however, the mint-signature is read as zp. There is a specimen similar to this in the E. T. Newell Collection, New York, but it has the usual ear-ring ••• on the obverse. See Miles (op. cit., p. 7, no. 7 B).
- P. 68. 100. = Miles (op. cit., p. 6, no. 7 a). In the Davis Collection, Baghdad (now dispersed), there was a specimen of this type with usual ear-ring on obverse and with a tiny triangle of dots above the left wing of the king's head-dress. The coin measured 1.25 in. and weighed 62 gr. (4.01 grm.).
- P. 69. 101. I noticed in a London sale room a similar specimen on which the Pehlevi legend in the first quarter of the margin was defectively written  $\sim$ . The coin weighed 63 gr. (4.08 grm.). There is a variant illustrated in Stickel (ii, Pl. 45).
- P. 69. 102. See Nützel, nos. 118, 119; Miles (op. cit., p. 7, nos. 8 A and 8 B); Num. Circ., 1935, col. 433.
- P. 69. 103. A similar, but clipped specimen with ear-ring as usual •• appeared in a London sale room recently; *Num. Circ.*, 1935, col. 433. See Miles (op. cit., p. 7, nos. 9 A and 9 B).
- P. 69. 104. Mordtmann (Z.D.M.G., 1879, p. 94, no. 57) mentions a coin, in his own collection, of this mint-signature, which he interpreted as ZD, and of this date, which apparently had another Pehlevi legend in the first quarter, namely with Unfortunately he did not reproduce this remarkable coin.
- P. 69. I. 37. I have dated this 63 with a certain amount of reservation since there is such a slight difference sometimes in the Pehlevi forms for 62 (TRINSHST) and 63 (TLISHST). Mordtmann (Z.D.M.G., 1858, p. 51, no. 299) recorded an example of this mint and year in the Jena Cabinet, but Stickel (Handbuch, ii, 1870, no. 45) correctly interpreted the date as 61. (See his Plate no. 45.) The

other example mentioned by Mordtmann (Z.D.M.G., 1879, p. 95, no. 62) of this date is no doubt likewise a misreading of 61. Unfortunately the absence of a reproduction leaves the matter in some doubt. Miles (op. cit., p. 7, no. 10) also accepts the reading 63 for a date which, as can be seen from his Plate I of a Herzfeld coin, ought really to be read as 61, as on no. 101.

- P. 69. B. 16. As 'Ubaidallāh was killed in A.H. 67, this coin must be a post-humous issue. Mordtmann (Z.D.M.G., 1879, p. 95, no. 67) also ascribed to this mint and year a coin in the von Prokesch-Osten Collection.
- P. 69. ANS. 11. This mint-signature is read by Mordtmann as KISHT of which he regarded the mint-signature no. 16, p. 61, as an abbreviated form, namely KSH.
- P. 70. I. 38. I came across another example in the Convent of St. Anne, Jerusalem. Unfortunately I have been unable to illustrate either specimen.
- P. 70. 105. I have seen another example like this one in the Istanbul Museum (Recent Acquisitions).
- P. 70. B. 17. Nützel regarded the date as uncertain. Cf. similar date on Ox. 3, p. 60, above.
- P. 71. 106. I have seen a similar coin with the same unusual form of the mint-signature in the Istanbul Museum (Recent Acquisitions).
- P. 71. I. 40. In the White King Sale Catalogue (Schulman, June, 1905, no. 2053, Pl. I) there was a coin ascribed to this mint, with no date specified. Unfortunately only the obverse was illustrated. I am inclined to regard it as being similar to B. 22, p. 72 (Pl. XIII. 1) because of the presence in the first quarter of the margin of a Pehlevi legend which, so far as I have found, only occurs on coins of this governor struck at this mint.
- P. 71. ETN. 15. There is also an example of this mint and date in the Osman Arıdağ Collection, Istanbul.
- P. 72. B. 19. This is the coin from the General Fox Collection described by Thomas (J.R.A.S., 1850, p. 291, no. 14) who read the mint-signature as YSHKAN or KSHKAN; Mordtmann, however, proposed Zangan (Z.D.M.G., 1879, p. 95, no. 60 b). In the Istanbul Museum (Recent Acquisitions) I came across an example of this same mint and date, which, however, showed that the margin was  $\hat{x}$ : Cf. coins B. 20 and B. 21, p. 72.
- P. 72. B. 21. Although the three coins described above (B. 19-21) are ascribed to separate mints by Nützel, it seems to me more than probable that they are all varieties of the same mint of which B. 19 above preserves the fullest form of the name. There are two other examples of the above variety in the Istanbul Museum.
- P. 72. B. 22. This is the coin mentioned by Mordtmann (Z.D.M.G., 1879, p. 93, no. 47). As I mentioned above (note to I. 40) the obverse of a coin illustrated in the White King Sale Catalogue appears to resemble the above obverse and shows the Pehlevi legend comparatively clearly as parent differences between the two obverses are that the White King coin had a small crescent over the I. shoulder of the bust and :: at the end of the basmala in the margin.

P. 73. ETN. 16. There is a similar example in the Istanbul Museum (Recent

Acquisitions).

P. 73. 108. This unique fals was first published by the present writer in Num. Chron., 1935, p. 250, Pl. XVIII. 6.

P. 73. Mar. 2. As I have not been able to see this coin or obtain a cast, the

description is based on that of Markoff (op. cit.). Cf. O. 7, p. 74.

- P. 74. O. 7. Although this mint is not represented amongst the regular coins of 'Ubaidallāh ibn Ziyād which bear his full name, there is no reason to suppose that the coins with the name 'Ubaidallāh only were issued for any other governor, especially since the mint in question (Herāt) was in that governor's jurisdiction at the date in question. I believe that the coin described by Mordtmann (Z.D.M.G., 1879, p. 93, no. 48) was really similar to the above. See above M. 34, p. 53.
- P. 74. 111. Nos. 110 and 111 are the coins mentioned by Thomas (J.R.A.S., 1850, p. 295, no. 22). Cf. Nützel, no. 128.
- P. 75. 112. Thomas (J.R.A.S., 1850, p. 294, no. 18) considered the date as a corrupt rendering for 66 (SHSHSHST). This mint is no doubt the one intended by Valentine (p. 78) instead of his put st which is vouched for by none of the authorities as a mint-signature of Salm.
- P. 75. 113. Cf. Thomas (Prinsep's Essays, i, p. 66) and note to no. 115 below.
  - P. 75. B. 23. It is possible that the date is  $H\underline{SH}T\underline{SH}ST = 68$  (A.H.).
- P. 76. 115. The example of this mint and date in the Copenhagen Cabinet (Ostrup, no. 65) has the date clearly written thus: HF(T)SHST. It has to be borne in mind that a defectively written 67 as on coin no. 115 is liable to be mistaken for a 70 (1222) HETAT). The specimen in the Ashmolean Museum, Oxford, has a defective date, which could easily be read as 70.
  - P. 76. 117. Cf. Nützel, no. 136, Pl. II and 137-40.
- P. 77. P. 5. This is the coin which was wrongly dated as 61 by both Thomas (J.R.A.S., 1850, p. 294, footnote) and Mordtmann (Z.D.M.G., 1879, p. 97, no. 70).
- P. 77. 122. ex Masson Collection = Thomas (J.R.A.S., 1850, p. 293, no. 15). This is the coin which Mordtmann attributed to Sīstān (in Z.D.M.G., 1854, p. 158, no. 789), reading the mint-signature as si, and later (in Z.D.M.G., 1879, p. 97) to Sūsa, reading the mint-signature as sv. Thomas read the Pehlevi letters as IZD and interpreted them as Yezd. Another example mentioned by Thomas is now in the Berlin Cabinet (General Fox Collection). Nützel (no. 141) followed Thomas's attribution. The Berlin specimen weighs 62·1 gr. (4·02 grm.).
- A similar interpretation of a mint-signature on the part of Mordtmann (Z.D.M.G., 1879, pp. 96-7) is no doubt his reason for his Sūsa year 54 with the marginal legend in fourth quarter) which he regarded as ohne Zweifel der Name Selem. Although he stated that this coin was in the Berlin Museum there is no trace of it in Nützel's Catalogue as such. Instead the coin described by Nützel (no. 141) and attributed to Yezd and dated 56 has countermarks which tally very closely with the legends recorded by Mordtmann. What the latter regarded as the Arabic for Salm is, if this is the correct deduction, none other than the countermark no. 39 badly stamped.
- P. 77. 123. ex Masson Collection. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 294; cf. Mordtmann, Z.D.M.G., 1854, p. 158, no. 790).

Thomas read the date as אלמשמו = TLTSH(s)T i.e. 63 (cf. C. 6, p. 82). Mordtmann suggested reading the countermark no. 52 as 'Iṣṭakhr in Persia'.

- P. 78. 126. There is an example in the Ashmolean Museum, Oxford, on which the date is similarly written, but the obverse has small crescent over l. shoulder.
  - P. 79. 131. This coin has been cut down to the Tabaristan standard.
- P. 79. 132. There is also a specimen illustrated in Wilson's Ariana Antiqua, Pl. XVII, 2. See Olshausen, pp. 49 ff. and p. 75. The latter read the governor as 'Amr ibn Ziyād. Krafft (p. 19, no. 3) and Mordtmann (Z.D.M.G., 1850, p. 507) corrected this.
- P. 80. B. 24. Olshausen, p. 79, recorded one in the Pogge Collection, Greifswald. See Krafft, p. 19, no. 5. The countermark on the Berlin coin is described by Nützel as a horse's head with a wing behind and with a legend which he regarded as Arabic _4] (?). With this opinion I cannot agree. The countermark resembles no. 7 in my list of countermarks and the script above the head is not Arabic but Pehlevi.
- P. 80. B. 25. The date, however, is only presumably 67, it may, in fact, be an indistinct 70 (1211) = HFTAT). Cf. note to no. 115 above. Thomas (J.R.A.S., 1850, p. 294) declares that this is a common date. So far I have seen no certain example of it amongst the coins of this governor struck at this mint. But see mint of Merv al-Rūdh.
- P. 81. 138. The additional Kufic word on the obverse margin is al-'Azīz 'the Mighty', one of the nine and ninety beautiful names of Allah. It also appears on the coins of 'Abd al-'Azīz ibn 'Abdallāh ibn 'Āmir. Note diacritic point over the first zain in the legend as it appears on the coin.

The unusual Ephthalite legend on the reverse margin is paralleled on the

Arab-Ephthalite coins described below on p. 127.

P. 82. 145. There is a coin of this mint ascribed to the year 62 in the Johnston Sale Catalogue (Sotheby, July, 1906, p. 13) but I suspect that it is a

misreading of the date 63.

- P. 82. C. 6. Østrup wisely described the date on this coin as douteuse. Nevertheless I am inclined to read it as 63 as being the most probable explanation. In spite of the countermarks in the second quarter I can see no trace of any underlying Arabic legend as one would expect. Østrup regarded the marginal legend as being effaced. With this I cannot agree. This absence of the customary Arabic marginal legend is by no means unique. Cf. nos. 161-2.
- P. 83. B. 26. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 294, no. 17a) as being in the General Fox Collection (=Mordtmann, Z.D.M.G.,

1854, p. 159, no. 795).

- P. 83. 150. ex Masson Collection. This unique coin is the one mentioned by Thomas (J.R.A.S., 1850, p. 295) although his transcription of the mint-name is not accurate (Pl. II, fig. 15); hence Mordtmann's אול palch, balch (Z.D.M.G., 1854, p. 158, no. 792) and Valentine's palk (p. 80). See also Tiesenhausen, no. 150. The coin is reproduced here for the first time (see Mint Notes).
- P. 84. Ox. 4. Of this remarkable coin, hitherto unpublished, I have seen two other examples, one in the Fitzwilliam Museum, Cambridge, and one in the Istanbul Museum (Recent Acquisitions).
  - P. 84. 151. = Thomas (J.R.A.S., 1850, p. 317, no. 55), who suggested that

the mint was Baṣra. See Mint Notes, s.v. Bǐ. Mordtmann, however (Z.D.M.G., 1854, p. 169, no. 857), read the mint-signature as BI = Bihistun. See *Tiesen-hausen*, no. 104. Another specimen in the Ashmolean Museum, Oxford, is the coin from the Bardoe Elliot Collection recorded by Thomas (J.R.A.S., 1852, p. 408).

P. 85. 152. This and Dam. 7, p. 86, are the first examples of this mint-signature to be published (see Mint Notes).

P. 86. J. 4. Another specimen in Mordtmann's own collection is mentioned by him (Z.D.M.G., 1879, p. 100, no. 78) similar to ETN. 17. It weighed 58.7 gr. (3.8 grm.).

P. 87. ETN. 18. The specimen of this mint wrongly ascribed by Tiesenhausen (no. 116, Pl. I, no. 11) to the year 53 is similar to the above. It was in the Prince Gagarine Collection. Tiesenhausen interpreted the mint as Fīl (علی) which actually is a rare Umaiyad mint in the regular Muḥammadan series of dirhams (see Nützel, Pl. IV, no. 327). The coin also wrongly ascribed by Nützel (no. 100) to the year 53 and to the mint of Fīrūzābād, is similar to the above. It weighs 48-6 gr. (3-15 grm.). Nützel (p. 381) wrongly dated it in terms of the era of Khusrau II following Mordtmann.

P. 87. B. 27. Nützel read the date as sipn ja = 53 and equated it with the era of Khusrau II.

There was a coin of this governor, judging by the marginal legend (ب الكم ) in the Siouffi Collection, Mosul (Supplement, no. 1, 1891, p. 20), but no particulars as to mint or date are given.

P. 87. B. 28. This is the coin mentioned by Mordtmann (Z.D.M.G., 1879, p. 101, no. 81).

P. 88. B. 29. The countermark is described by Nützel as 'Kopf und Hals eines Fabeltieres'.

P. 88. 158. Cf. Nützel, no. 156, though he read the mint-signature as BABĀ.

P. 89. 162. A variety of this date illustrated in the Michael Sale Catalogue (Schulman, March, 1914, Pl. I, no. 393) is now in the Philip Ziegler Collection, Manchester. It weighs 46.6 gr. (3.02 grm.) only, since it is slightly clipped.

P. 89. 163. Cf. Nützel, no. 158, where the date is HSHTSH(S)T:

P. 90. 166. This coin, or a similar one, was first published by Thomas (J.R.A.S., 1850, p. 300, no. 27) but never illustrated, hence Mordtmann's doubts regarding the rare form of the date (Z.D.M.G., 1854, p. 161, no. 809). But this hybrid dating, half Aramaic and half Pehlevi—not as Mordtmann regarded it 'halb arabisch und halb persisch'—is not exceptional (see C. 6, p. 82).

Thomas read the mint-signature as Khubus but I prefer to regard it as an abbreviation of the name of  $\underline{Kh}$ urāsān, the province over which 'Abdallāh ibn  $\underline{Kh}$ āzim was governor. The same mint-signature is to be found on the coins described on pp. 127-9, which I have named Arab-Ephthalite, and which I

consider to have been issued by this same governor.

P. 90. 167. This date was first recorded by Thomas (J.R.A.S., 1850, p. 300, no. 25) but not illustrated. Vincent Smith (Catalogue of the Coins in the Indian Museum, Calcutta, i, p. 230, no. 3) also mentions an example of this mint and date which he read as SISHAST, but I have been unable to verify this. Stickel's example illustrated in his Handbuch (ii, p. 92, Pl. no. 50) is wrongly dated.

The correct date is 69 (NAVSHST). Cf. the examples nos. 175-84 of this date, particularly the appearance of the pellets in the reverse margin (**), which definitely fixes the later date.

P. 93. 184. Thomas (J.R.A.S., 1850, p. 300, no. 25 f) mentions an example with the name of 'Abdallāh's father spelled HAZM (presumably in Pehlevi. As he does not illustrate the coin we have only his word for this variety.

Another example, with countermarks, of this mint and date is illustrated in Stickel's *Handbuch* (ii, Pl. no. 50) where it is wrongly ascribed to the year 63. See also Nützel, nos. 162-4.

P. 94. 186. There is a coin of this mint and date, with pellet in addition to cross l. of crown, in the American Numismatic Society Collection, New York. In the *Transactions of the Russian Archaeological Society* [in Russian], St. Petersburg, vol. vi (1892), Tiesenhausen published and illustrated (pp. 229-30; Pl.) a gold coin in the Collection of Gen. Komarov with the name of 'Abdallāh ibn Khāzim and of the above mint and date. The following is a description of it from the plate:

As no. 186 above, but without countermarks; breast-ornament *; small crescent over l. shoulder [holed l. of crown].

As no. 185 above; margin without additional pellets.

The coin is said to weigh 35.9 gr. (2.33 grm.) and to measure 1.1 inch (30 millimetres). This seems a ridiculous weight for a gold coin of this size and has no parallel with any gold coin of the Sassanian or Muhammadan series. I conjecture that it is really gilt. It differs from any of the official silver, described above, of this mint and year in the epigraphy of the name-legend (thus and any of the coins of this governor known to me; and lastly in having the margin without the additional pellets characteristic of the coins of this mint from 67-73. Unlike the gold forgeries of coins of 'Umar ibn 'Ubaidallāh mentioned (p. 193), however, it is not cast from a silver coin die. Cf. the so-called gold coin of AFZUT type in the Tabaristān section (p. 161).

P. 94. B. 31. This is the coin referred to by Thomas (J.R.A.S., 1850, p. 300, no. 25i) as being in the General Fox Collection. As 'Abdallāh died in A.H. 72 this coin is a posthumous issue (cf. Mordtmann, Z.D.M.G., 1879, p. 102). I see no reason to doubt this date, although there is but very little difference between 72 and 73 in Pehlevi script.

P. 95. Ox. 5. This is the unique coin first published by Thomas (J.R.A.S., 1852, pp. 411-12 = Mordtmann, Z.D.M.G., 1854, p. 190, no. 49 = Tiesenhausen, no. 176). This is the first time, however, that it has been reproduced.

P. 95. 191. The coins of this governor were published for the first time in Num. Chron., 1934, pp. 290-2. There they were dated A.H. 74 and attributed to Talḥa ibn 'Abdallāh ibn 'Auf. Since then I have revised my opinion and have come to the conclusion that they belong to the preceding decade, and were struck in the name of Talḥa ibn 'Abdallāh who was appointed governor of Sīstān in A.H. 63. Two other specimens of his coinage were also published in the same article (see below). Since then I have come across another example—though much corroded—amongst a collection of coins brought back by Mr. G. P. Tate

from Sīstān itself, which coincides with my proposed interpretation of the above mint-signature.

P. 96. 192. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 304, no. 34) who, however, read the Kufic legend in the third quarter as المدلى, which Mordtmann (Z.D.M.G., 1854, p. 164, no. 838) gave as المديل, and which Tiesenhausen (no. 169) transmitted. The word is actually المزير (al-'Azīz i.e. 'the Mighty'), one of the ninety-nine beautiful names of Allah and an appropriate one for a governor to employ whose name means 'Servant of the Mighty'. This same legend occurs also on the coins of Salm ibn Ziyād (see above no. 138 and note, p. 189). In this case, however, there is no diacritic point on the coin legend.

P. 96. Cam. 7. This is the coin from the Masson Collection mentioned by Thomas (J.R.A.S., 1850, p. 304, no. 35). Mordtmann (Z.D.M.G., 1854, p. 164, no. 837) interpreted this mint-signature as si=Sijistān, of which province we know 'Abd al-'Azīz was governor. Cf. note to 122, p. 188.

- P. 97. B. 32. As can readily be seen on examination of the Plate the attribution to this governor seems far from convincing. This particular coin. formerly in the General Fox Collection, was first published by Thomas (J.R.A.S., 1850, p. 320, no. 66 = Mordtmann, Z.D.M.G., 1854, p. 171, no. 871 = Tiesenhausen, no. 227). The difficulty of decipherment was apparent to all. Only Thomas had seen the coin itself before it passed into the Berlin Cabinet. Thomas. who left the reading of the governor's name an open question, dated the coin 73 (SHAFTAT) and interpreted the mint-signature as TAUMA. Mordtmann, not having seen the coin, accepted these data. But when the coin went into the Berlin Museum he read the mint-signature as TAUT, apparently not realizing that the coin was one and the same as that previously mentioned by Thomas. Thus (Z.D.M.G., 1879, p. 106) he has made two different versions of the same coin and classified them as separate entities. At the same time he has gone farther and interpreted the governor's name on the Berlin specimen as 'Abd al-Rahmān ibn 'Abdallāh. Nützel, however, disagreed with this rendering and substituted 'Abd al-'Azīz ibn 'Abdallāh, and also, correctly in my opinion, read the date as 71 (in the form YAJHFTAT). During an examination of the coins in the Istanbul Museum (Recent Acquisitions) I came across another example of the above, but unfortunately the governor's name was just as problematical so that I am no nearer a solution. It is just possible that Mordtmann's 'Abd al-Rahman may be the correct name, with the form of which it bears a close superficial resemblance, as can be seen by comparison with the actual coin of that governor described on p. 123. An argument against the 'Abd al-'Azīz attribution is the fact that the name on the above coin does not have the complete form which is characteristic of the coins of 'Abd al-'Azīz minted elsewhere (see no. 192, Cam. 7 and Ox. 6, pp. 96-7).
- - P. 98. 193. = Numismata Orientalia DXL. Marsden was unable, however,

to attribute this coin and a similar specimen was illustrated by A. de Longpérier in his Essai sur les médailles des Rois Perses (Paris, 1840, Pl. XII, no. 2) and attributed to Sarbaraz by error. Olshausen (p. 47) correctly attributed it though he went wrong over the mint-signature. Thomas (J.R.A.S., 1850, p. 303, no. 32) states that examples of this mint and date are common. He gives the average weight of four specimens as 60.7 gr. (3.93 grm.).

- P. 98. ANS. 14. Cf. Thomas (J.R.A.S., 1850, p. 303, no. 32a). There is a similar specimen in the Istanbul Museum.
- P. 99. B. 34. In the same Collection there is another specimen of this mint and date similar to the above but with countermarks nos. 14 and 43 on the obverse, and with pellet l. and r. of mint-signature (Nützel, no. 171). See also Tiesenhausen, no. 213, and Stickel (Handbuch, ii, no. 52).
- P. 99. 194. There is also a (clipped) specimen of this date in the American Numismatic Society Collection, New York.
- P. 99. 195. There is a specimen like this one, but unmarred by countermarks in the Philip Thorburn Collection, London. It weighs 62.3 gr. (4.04 grm.). Cf. the two examples in Berlin (Nützel, nos. 173, 174).
- P. 99. 196. There are three specimens of this date in the Fitzwilliam Museum, Cambridge, one of which has the countermark no. 47 = MRWRUT (cf. Thomas, J.R.A.S., 1850, p. 303, no. 31). Thomas (op. cit.) gives the average weight of seven specimens which he had seen as 62.8 gr. (4.07 grm.).
- P. 100. 197. Cf. Nützel, no. 175. There is a fine specimen of this date in the E. T. Newell Collection in the American Numismatic Society, New York, which shows the pellet on the r. margin clearly. When Thomas wrote in 1850 (J.R.A.S., p. 303, no. 31a) he only knew of one specimen of this date in the Masson Collection. This coin is now in the Fitzwilliam Museum, Cambridge. The coin described in the Istanbul Museum Catalogue (no. 18) and dated 72 is actually a coin of the above year as I found on examination.
- P. 100. 201. In the British Museum there are two casts in gold of this mint and year both from the same mould. One came from the Claude Stewart Collection 1848, and weighs 68.8 gr. (4.46 grm.); while the other came from the Prinsep Collection, 1847, and weighs 66.3 gr. (4.30 grm.). Thomas (J.R.A.S., 1850, p. 303) accepted these as genuine gold coins struck by the Arab Governor 'Umar ibn 'Ubaidallāh. They are both obviously cast from the same silver coin. Cf. note to 186, p. 191. Mordtmann (Z.D.M.G., 1854, p. 164, no. 834) and Tiesenhausen (no. 211) have repeated Thomas's assertion.
- P. 101. 203. Thomas (J.R.A.S., 1850, p. 302, no. 30) records a coin of this mint and date but with marginal legend which he states is in the British Museum. As there is no such coin in the National Collection and the above specimen which was acquired in 1845 was not mentioned by him, I can only conclude that his description of the marginal legend must be at fault. Mordtmann (Z.D.M.G., 1850, p. 163, no. 825 = Tiesenhausen, no. 164) transmitted Thomas's description; but he had not had an opportunity of seeing the coin itself. In 1879 (Z.D.M.G., p. 102, no. 84) he recorded an example of this mint and date in the von Prokesch-Osten Collection. In this case the marginal legend tallied with coins nos. 202 and 203.
  - P. 101. Cam. 10. ex Masson Collection. This is the coin mentioned by Thomas

(J.R.A.S., 1850, p. 303, no. 33 = Mordtmann, Z.D.M.G., 1854, p. 164, no. 831). Olshausen (Pehlewi-Legenden, p. 79) and Nützel (no. 180) described a similar specimen. Amongst the Recent Acquisitions of the Istanbul Museum there is another, but without the additional pellet in the fourth quarter of the obverse.

P. 102. 205. There is a similar specimen in the Fitzwilliam Museum,

Cambridge.

P. 102. B. 35. This is the coin mentioned by Mordtmann (Z.D.M.G., 1879, p. 103, no. 85) who read the mint-signature as NIH=Nishapur. The coin is so badly broken that the casting has been a very delicate operation.

P. 102. I. 42. Until I came across the above coin in Istanbul the only other record I had of such a remarkable piece was a statement by Mordtmann (Z.D.M.G., 1879, p. 103, no. 86) of one in the Subhi Pasha Collection.

P. 103. Th. 12. Dorn (Mélanges, viii, p. 276) gives another example with the above countermark.

P. 104. 207. This is the coin described by Thomas (*J.R.A.S.*, 1850, p. 306, no. 36) who read the mint as Kermansir (?). See Mordtmann (*Z.D.M.G.*, 1854, p. 165, no. 839).

208. The date I prefer to read as a variant of 71 rather than as 73. (سوسوروسی), especially as we know from the historians that Mukātil was slain in A.H. 72 (cf. Cam. 11, p. 106). Mordtmann (Z.D.M.G., 1879, p. 107, no. 95) published, without illustration unfortunately, a coin which he incorrectly ascribed to a governor named Muhammad ibn Maslama, but a comparison of his transcription of the legends on his coin with those on the above clearly demonstrates that they are meant to be the same. Moreover, the unique marginal legend in the third quarter, for which I have been unable to suggest a satisfactory explanation (and which Mordtmann quite wrongly read as Bassrie) leaves the matter beyond dispute. The date on his specimen he read as 72 (see below Ties. 3). Valentine (p. 97) read the governor's name quite wrongly as Muhammad or Modud bin Musalman (sic). When the present writer first published the above coin in 1935 (Num. Chron., pp. 250-1) he was unaware that he had been forestalled in the correct interpretation of the governor's name by Tiesenhausen in 1891 (in the Trans. of the Russian Arch. Soc., vi, p. 259, no. 76). Tiesenhausen's coin is described under the year 72 (Ties. 3, p. 105).

P. 106. Cam. 11. This is the unique coin first published by Thomas (J.R.A.S., 1850, p. 319, no. 64), who read the date as SHFTAT (73) and the mint-signature as SHŠS (?). The governor's name eluded him though he almost stumbled upon it in Prinsep's Essays, I, p. 68. The first part he read correctly as al-Mughīra (with un- for al- in the Pehlevi transcription) but the father's name as Muslim (I-MSLMAN). Mordtmann (Z.D.M.G., 1854, p. 170, no. 870; see also 1865, pp. 461-3), who had only Thomas's transcription to work on, read the name as Numaīra ibn al-Muhallab and the mint-signature as SHAŠA. In 1879 (Z.D.M.G., p. 109, no. 22) he even expressed his doubt of the last name. The correct interpretation is to be found in a combination of the readings of both Thomas and Mordtmann, namely, al-Mughīra ibn al-Muhallab, which has the added advantage of coinciding with known historical data. (See Biographical Sketches.) Tiesenhausen (in his Monnaies des Khalifes, 1873, p. 26, no. 225) first suggested this, though he strangely misspelled the Arabic name of the governor's father under the suggested the strangely misspelled the Arabic name of the governor's father under the suggested the strangely misspelled the Arabic name of the governor's father under the suggested the

for النهابي). He regarded the mint as being Marw al-Shāhijān (النهابي) or simply Shāhijān, which is the name of Great Merv in contradistinction to Little Merv or Merv al-Rūdh (мижит of these coins). Valentine (p. 98, no. 22) for some reason gave the mint as Nahavan (sic).

P. 106. 209. I have interpreted the mint-signature as above because of its resemblance to that on the coins of 'Abdallāh ibn Khāzim of the year 63 as well as on the Arab-Ephthalite coins which were almost certainly issued for Khurāsān. See Mint Notes.

P. 107. 211. This is the coin described by Thomas (J.R.A.S., 1850, p. 308, no. 39).

P. 107. B. 36. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 308, no. 40) in the General Fox Collection. He read the date as 74; but Nützel's rendering is the more likely, judging from the Plate, though he dates it

in terms of the Hijra era. Cf. date on no. 209, p. 106.

P. 108. Cam. 12. This is apparently the coin described by Thomas (J.R.A.S., 1850, p. 307, no. 37). The other coin of this mint and date, which he mentioned as being in the General Fox Collection, is now in the Kaiser Friedrich Museum, Berlin (Nützel, no. 185, Pl. III). Nützel, however, refused to express an opinion on the mint-name which is the same as on the B.M. coin (no. 212). Dorn (Mélanges, II, p. 260, no. 17) mentions another specimen which he ascribes mistakenly to 'Abdallāh ibn Umaiya by a sort of hypallage. Cf. the coin of Salm ibn Ziyād (Ox. 4, p. 84).

P. 109. 215. This is the coin described by Thomas (J.R.A.S., 1850, p. 309,

no. 41 = Mordtmann, Z.D.M.G., 1854, p. 166, no. 844).

P. 109. So. 1. In the Johnston Sale Catalogue (Sotheby, July, 1906, p. 13, lot 132) there is a coin of this governor said to be of this mint and of the year 74. I am inclined to regard this as due to a misreading of the mint of BISH. The statement is without any confirmation.

P. 109. Th. 13. This unique coin was first published and attributed to this governor by the present writer in *Num. Chron.*, 1934, pp. 284-8. The correct interpretation of the mint-signature, however, was first given by Miles (op. cit., p. 7, no. 13) on the authority of Herzfeld. The coin in Göttingen attributed to this governor by Olshausen (p. 46) is actually a coin of the 'Abbāsid Governor

in Țabaristan Jarir as I propose to demonstrate.

Olshausen (pp. 35 and 46) attributed a coin in the Göttingen University Museum to Bishr ibn Marwān. He had never seen the coin itself and his conjecture is due to a misinterpretation of an Arabic legend made by his predecessors Tychsen and Frachn. Tychsen alone had actually seen the coin in question. His original statement (Th. Chr. Tychsen: Commentatio de numis veterum Persarum, p. 24, in vol. i of the Commentationes... recentiores, 1808-11) mentions certain coins of what we now know as the 'Abbāsid governors in Tabaristān—an unmistakable type. The name-legend on the Göttingen specimen was in Kufic

script which he read as Jaser (سرر). Fraehn (J.A., iv, p. 335, no. viii; see Jahresverhandlungen der kurländischen Gesellschaft für Literatur und Kunst, Mitau, 1822, vol. ii, p. 411) preferred to read this legend as Boschr (شرر). In 1843 Olshausen (pp. 35 and 46; the English translation Num. Chron., 1849, p. 85, has Bashr (شرر), but on p. 123 Besher; Krafft, pp. 13 and 22, however, has Beschr) repeated Fraehn's rendering and also suggested that it belonged to the time of the Umaiyad Governor Bishr ibn Marwān. The explanation is really quite simple. The Kufic legend that puzzled Tychsen in the first place must have been حرو Larīr, which he read as

P. 110. Th. 14. When I first published this unique coin in 1934 (Num. Chron., pp. 288-90) I read the date as YAJHFTAT (71) but on further examination I have been forced to the conclusion that it is certainly 79. We know from the annals that 'Ubaidallāh was governor of Sīstān in 78-79. See Biographical Sketches.

P. 110. O. 8. There is also another in the Istanbul Museum (Recent

Acquisitions).

- P. 110. Cam. 13. ex Masson Collection. This is the coin described by Thomas (J.R.A.S., 1850, p. 318, no. 60) who read the second part of the name as Abīdwān (اليدران). Mordtmann at first (Z.D.M.G., 1854, p. 170, no. 866) read the name as Umian bin Aban, but later (ibid., 1879, p. 108) he suggested that the name on the coin—which unfortunately he had never actually seen—might be Humrān ibn Abbān (or Abān), although he confessed he was unable to find historical confirmation of such a person's governorate. Tiesenhausen, however, already in 1873 (no. 218) had read the same name correctly and had referred to Weil's Geschichte der Chalifen (i, pp. 269, 411) for the historical data. See Introduction, Biographical Sketches. There is also an example of this variety in the Istanbul Museum (Recent Acquisitions).
- P. 111. 216. This is the coin described by Thomas (J.R.A.S., 1850, p. 318, no. 61 = Mordtmann, Z.D.M.G., 1854, p. 170, no. 867 = Tiesenhausen, no. 219). Thomas illustrated the above coin in a later publication (J.R.A.S., 1871, p. 433, no. 9, Pl. I) but his interpretation was still incorrect, as was also Mordtmann's (Z.D.M.G., 1879, p. 107, no. 94). None of the foregoing authorities correctly interpreted the governor's name. The dirhams of 'Aṭīya (السّراهم السّراهية المعرفة identified by the writer in Num. Chron., 1934, pp. 12–17. A specimen similar to the above, but without countermark, is illustrated in the Strauss Collection Sale Catalogue (Schulman, Jan., 1913, Pl. V, no. 1010) though it is not correctly attributed. I have also seen two of this date in the Istanbul Museum (Recent Acquisitions) on which the mint-signature is no. 30. There is also a specimen in the American Numismatic Society, but the date is not sufficiently clear.
- P. 111. I. 45. There is another similar specimen in the Osman Arıdağ Collection, Istanbul.
- P. 111. Th. 15. A similar specimen (holed) in the Davis Collection (now dispersed) measured 1.2; 53.3 gr. (3.45 grm.). In addition it had a pellet in the first quarter of the obverse margin.
- P. 111. 217. This is the coin described by Thomas (J.R.A.S., 1850, p. 319, no. 63 = Mordtmann, Z.D.M.G., 1854, p. 170, no. 869 = Tiesenhausen, no. 237) although his attribution is wrong and his description of the obverse margin is

inaccurate. He read the mint-signature as KRMANSR, and considered the name-legend as an imperfect rendering of Umaiya ibn 'Abdallāh.

- P. 112. 218. This is the coin described by Thomas (J.R.A.S., 1850, p. 318, no. 62 = Mordtmann, Z.D.M.G., 1854, p. 170, no. 868 = Tiesenhausen, no. 236) though incorrectly attributed. It is illustrated by him later on (J.R.A.S., 1871, p. 433, no. 8, Pl. I) though once again his interpretation is unsuccessful. Dorn (Mélanges, ii, p. 260, no. 14) also failed to interpret one of this mint and date. As can be seen from Mordtmann's Table no. I (Z.D.M.G., 1854) the coin in the Vienna Cabinet of this mint and date which he attributes to 'Abdallāh ibn 'Abdallāh is really one of 'Aṭīya. In his next attempt at deciphering the governor's name (Z.D.M.G., 1879, p. 107, no. 94) he was very nearly successful.
- P. 112. N. 2. This coin was first described by Olshausen (Z.D.M.G., 1854, pp. 842-3), though he interpreted the mint-signature as SINT (i.e. SIND). In this he was followed by Nesselmann in his Catalogue of the Oriental coins in Königsberg University in 1858 (Die orientalischen Münzen, pp. 12-13), although Mordtmann in his article on Kaṭarī (Z.D.M.G., 1855, pp. 850-8) had disputed this and suggested ANT = Antmesch or Enderäbe. In 1858 Mordtmann also published the same coin and again read the mint-signature as ANT (Z.D.M.G., 1858, p. 52, no. 303), though he later (ibid., 1879, p. 109, no. 23) read it as UT. Tiesenhausen (no. 234) preferred ANT. In Pl. I, no. 10, the latter gave a somewhat poor drawing of the coin. I have been unable to obtain a cast for publication here.
- P. 112. I. 46. The date on this coin is interesting confirmation of the historians who state that in this year Kaṭarī proclaimed himself Caliph.
- P. 113. 219. There is a similar specimen illustrated in the Berlin Catalogue (Nützel, no. 191, Pl. III) with countermarks nos. 28 and 14 in the first quarter of the obverse and a graffito on the reverse margin. It weighs 61-4 gr. (3-98 grm.). This is the same coin as is illustrated by Thomas (J.R.A.S., 1883, pp. 97-9, Pl. no. 6) when it was in the Collection of Alexander Grant. He, however, read the mint-signature as Baisa or Fesa. Mordtmann (Z.D.M.G., 1865, p. 473, no. 167) described another example in the S. Alishan Collection but interpreted the mint-signature as Basa (= Tiesenhausen, no. 2709). His further reference (Z.D.M.G., 1879, p. 109, no. 23) to a Baṣra example is a misprint. There is a specimen similar to no. 219 above, only clearer, illustrated in the Strauss Collection Sale Catalogue (Schulman, Jan., 1913, no. 1013, Pl. V). There are two specimens of this mint and date in the Istanbul Museum (Recent Acquisitions), one as above and one with breast-ornament •••.
- P. 113. ANS. 15. Cf. ANS. 16 described p. 116 under uncertain mint. There is also one of this mint and date in the Istanbul Museum.
- P. 114. 221. This is the coin described by Thomas (J.R.A.S., 1850, p. 311, no. 42) though he incorrectly described the marginal legend, and interpreted the mint-signature as BAISA. So Lavoix, no. 146.
- P. 114. 223. Tornberg (Rev. Belge de Num., 1870, p. 244, no. 111) records one of this date found in a Swedish hoard. Cf. Nützel, no. 186.
- P. 114. 226. A specimen in the Davis Collection, Baghdad (now dispersed), weighed 60·1 gr. (3·89 grm.).
  - P. 114. 227. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 311,

no. 44). The specimen in the Copenhagen Museum Cabinet (Østrup, no. 68) weighs 62·3 gr. (4·04 grm.). The two examples in Berlin (Nützel, nos. 187 and 188) weigh 62·9 gr. (4·08 grm.) and 62·1 gr. (4·02 grm.) respectively.

P. 115. So. 2. Only the mint-name was reproduced by Soret, fig. 2. Stickel

gives some additional details.

P. 115. B. 37. Nützel read the Pehlevi date, which is, as can be seen from the plate, rather uncertain, as 69. In the Biographical Sketches I have given reasons for considering that 79 is more probable. The Kufic graffito in the obverse margin is interesting. I suggest that it means — (i.e. excellent) and corresponds to the same legend on the coins of Yezdigird III type described above, p. 3. See note p. 173.

P. 116. 228. I have also seen two similar specimens in the Istanbul Museum

(Recent Acquisitions) and one in the Arab Museum, Damascus.

P. 116. ANS. 16. There is another example of this mint and date in the Istanbul Museum (Recent Acquisitions). Cf. the coin of Ardashīr-Khurra,

p. 113.

Mar. 3. Asiatic Institute, St. Petersburg (Markoff, p. 131, no. 56) P. 117. = Dorn (Mélanges, ii, p. 261, no. 5) and Tiesenhausen (no. 214). In the Kaiser Friedrich Museum, Berlin (Nützel, no. 190, Pl. III) there is a fragment of a coin of this governor apparently like this one but with mint-signature and part of legend cut off. The puzzling legend in the third quarter is interpreted quite impossibly by Markoff as 'Muhammad envoyé'. My own conjecture is that the full legend is بسم الله ربى الرحمن i.e. 'In the name of Allah my Lord the Merciful' (al-Rahman). This is analogous with the legends of al-Hakam (above, p. 86) in which there is an oblique allusion to the name of the governor—a sort of canting legend in fact. But as I have never seen an actual specimen of the above coin, my conjecture is based on the somewhat uncertain transcription supplied by Markoff (op. cit.). Nützel (p. 382) wrongly regards the date as in terms of the Hijra era. The eventful career of 'Abd al-Rahmān (see Biographical Sketches) points to a date in terms of the Yezdigird era, as I have proposed. It is remarkable, however, to find that era employed at such a late period on coins.

P. 118. 229. This is the coin recorded by Thomas (J.R.A.S., 1850, p. 314,

no. 46) though he gives the old interpretation of the mint-signature.

Markoff (Monnaies Arsacides, &c., p. 132, no. 59) records a specimen of this year with the name-legend: الحجاج بن يوسف امير; but I suspect that this addition may be due to a break in the die as on the above. In other respects the coin is the same. A badly damaged specimen is illustrated as the frontispiece of the second volume of the Jahresverhandlungen der kurländischen Gesellschaft, Mitau, 1822, and in J.A., iv, Pl. III, no. 1.

P. 119. 232. In the Strauss Sale Catalogue (Schulman, Jan., 1913, no. 1017, Pl. V) there is another example illustrated.

- P. 119. 234. This is apparently the coin seen by Thomas in 1852 (J.R.A.S., p. 413).
- P. 119. 235. There is a similar example in the Philip Ziegler Collection, Manchester, which weighs 58.2 gr. (3.77 grm.). The Paris specimen (*Lavoix*, no. 148) has the date completely written highlight.

P. 119. 236. There is a clearer specimen of this mint and date in the Philip Ziegler Collection, Manchester. The obverse marginal legend is defectively written as on no. 229. It weighs 62.4 gr. (4.04 grm.). The Paris specimen (Lavoix, no. 149) weighs 4 grm.

P. 119. Th. 16. This is the only example I have so far seen with the name of Ḥajjāj in Pehlevi. The transliteration of the Arabic τ by the Pehlevi κ is phonetically interesting. In the case of the name Jundab (see above, p. 46) the τ is represented by the Pehlevi z.

P. 120. 237. This is the coin recorded by Thomas (J.R.A.S., 1850, p. 314,

no. 47) though his interpretation of the mint-signature was wrong.

P. 120. Th. 17. This is similar to the coin in the Berlin Cabinet (Nützel, no. 194) which, however, is tentatively, but wrongly, attributed to the year 86. Mordtmann (Z.D.M.G., 1865, p. 473, no. 168) described a similar specimen in the S. Alishan Collection, though he read the mint-signature as BASA. In the Strauss Collection Sale Catalogue (Schulman, Jan., 1913, no. 1016) there is a coin said to have been of this mint and date, but as it is not illustrated, and there is no indication in the text that it had this marginal legend, it is impossible to say whether it was correctly dated. During a recent visit to the Convent of the Flagellation in Jerusalem I noted another example. (See Num. Chron., 1938, p. 295).

P. 120. 238. Cf. his Nummi Veteres, London, 1830, p. 205, xviii, A. 1, and Thomas (J.R.A.S., 1850, p. 314, no. 48). Olshausen (pp. 44-5) went wrong over the date and mint of this coin. He had, however, to depend on a cast only. There is a similar specimen illustrated by Stickel (Handbuch, ii, no. 55, Pl.).

P. 120. 240. Mordtmann (Z.D.M.G., 1854, p. 168, no. 856) gives the marginal legend mistakenly as المناب . A similar coin is recorded by Fraehn (J.A., iv, p. 336) who states that it had the legend الحند الله. There is an example in the Philip Thorburn Collection, London, which has no pellet in the name-legend. The coin mentioned by Thomas (J.R.A.S., 1871, p. 434, no. 13) is wrongly dated by him as 73 instead of 83 as can be verified by reference to his plate.

P. 121. B. 38. Cf. mint Ardashīr-Khurra, p. 118.

P. 121. Flag. 1. This is the coin mentioned in Père Lemaire's article (Num. Chron., 1938, p. 295). When I first saw the coin in Jerusalem in 1937 I was inclined to read the mint-signature as a blundered st (no. 53) = Iṣṭakhr which was the opinion accepted by Père Lemaire, but it might quite easily be a badly

written form of mint-signature no. 54 = TART.

F. Erdmann (Nummi Asiatici, &c., Kazan, 1834, p. 11, no. II-VI) records five coins of Arab-Sassanian type 'in quorum Areae I margine interiore sat distincte leguntur verba arabica = ربم الله حجاح '. No reproduction of these remarkable coins was given. It seems on the face of it incorrect. It is interesting that this legend is actually one mentioned by early Arab historians in connexion with the coinage of Ḥajjāj. (See Sauvaire, Matériaux, pp. 12, 138). No such coin has ever been forthcoming. It is possible that (a) Erdmann was influenced by the statement in the Arabic writers or (b) he made the same mistake as they presumably made, and interpreted a Pehlevi legend after the basmala as Arabic for Ḥajjāj. When Erdmann published his work the interpretation of the Pehlevi

script on these coins had not yet been demonstrated. In confirmation of this view is the fact that in the following coin on the same page no. VII, obviously a coin of the 'Abbāsid governor in Ṭabaristān 'Umar, Erdmann has interpreted the Pehlevi word _____ in the margin as Arabic ____ illāh Ḥajj- (sic).

P. 121. 241. This mutilated coin, formerly in the Masson Collection, was first published by Thomas (J.R.A.S., 1850, p. 317, no. 57, Pl. III, fig. xviii = Mordtmann, Z.D.M.G., 1854, p. 169, no. 860), who was presented with the natural difficulty of interpreting the second line of the name-legend. He did not venture to hazard a guess. What is visible of the overstruck legend clearly shows that it cannot be the name of 'Abdallah ibn Khazim, although the date would agree. But it is not one of his mints. Mordtmann (Z.D.M.G., 1879, p. 104. no. 11) thought it might be 'Abdallah ibn Abī Rabī'a who was (according to him) governor of Basra for the rival Caliph 'Abdallah ibn al-Zubair, if in fact the name was not that of 'Abdallah ibn al-Zubair himself. The vestiges of the legend are, however, against this. Mordtmann was wrong in his suggestion, for the particular governor of Başra at the time was al-Hārith ibu 'Abdallāh ibn Abī Rabī'a. The mint-signature was interpreted by both Thon as and Mordtmann as IZD i.e. Yezd in Fars. My own views regarding the identification of the mint in question are given in the Mint Notes. Tiesenhausen (no. 172) read the mint as AD for Adharbaijan and considered that the governor's name was 'Abdallāh ibn Abān.

'Abdallāh ibn al-Ḥārith ibn Naufal—if, indeed, it is his name on this coin—was nicknamed Babba (بَيّة). He succeeded 'Abd al-Malik ibn 'Abdallāh ibn 'Āmir (q.v.) as governor of Baṣra (in а.н. 64/65). His tenure was brief. He was succeeded by 'Umar ibn 'Ubaidallāh (q.v.). The date on the above coin suggests that he was afterwards sub-governor in Sīstān. His predecessor's coin (see Sch. 5, p. 97) is also dated in this same year.

P. 122. Cam. 14. ex Masson Collection. This is the coin described by Thomas (J.R.A.S., 1850, p. 317, no. 58=Mordtmann, Z.D.M.G., 1854, p. 169, no. 861; 1879, p. 104, no. 13=Tiesenhausen, no. 187=Valentine, p. 95). All who have written about it have proposed different versions of the puzzling Pehlevi name-legend. I can find none of them satisfactory nor can I suggest another that is more plausible. It is just possible that if the margin were not cut off the legend there would supply a clue to the decipherment. The name I have proposed above is purely conjectural and has no historical confirmation. Miles (op. cit., p. 7, no. 11) has recently suggested it might be Aslam ibn Zur'a al-Kilābī. I had already considered this possibility only to dismiss it. Neither the name-legend nor the historical data will fit. This is the first time this interesting coin has been illustrated. Perhaps this will induce someone to attempt a solution.

P. 122. Cam. 15. ex Masson Collection. This is the coin first published by Thomas (J.R.A.S., 1850, p. 318, no. 59). He read the name-legend as KAHTĀN ANTĀI (كيتان انتاي). Mordtmann (Z.D.M.G., 1854, p. 169, no. 862) read it as Kahtan Utai, and later (Z.D.M.G., 1879, p. 104, no. 14) interpreted the first line as KATAN (قطن العالق) and the second line as a title Chutai ('Lord'). Tiesenhausen (no. 175) read KATAN UTAI; while Valentine (p. 96) gave KAHTAN KUTAI. Dorn (Mélanges, ii, p. 283) identifies the governor with Ķaṭan al-Tā'ī (غطن الطاق) who, according to him, was in control of Herāt in A.H. 169-171. This is highly im-

probable. The coin is obviously a product of Umaiyad times. I have failed to find any satisfactory explanation of the puzzling Pehlevi legend. There are coins of Salm ibn Ziyād known of this same mint and date (e.g. no. 117 with the same breast-ornament). Apparently the coin was issued in the name of some subgovernor of Salm in Khurāsān. The only other example of this coin that I have come across is a clipped specimen in the Philip Thorburn Collection, London.

P. 122. M. 53. Mordtmann first of all interpreted the name-legend as DWIT KATIBI BN ASHAT: i.e. Dā'ūd (or Laith) secretary of Ibn Ash'ath, and the mintsignature as ANT. Tiesenhausen (no. 208) in 1873 preferred to see Laith (or Zaid) in the first word. Later, in 1879 (Z.D.M.G., p. 105, no. 16) Mordtmann proposed to read RUKAD ATEKI BIN ESCHAT, and the mint-signature as UT. Soon afterwards Salemann contributed a note on the interpretation of this and the coin T. 18 mentioned p. 123 (Z.D.M.G., 1879, p. 511), in which he regarded the puzzling obverse legend as not containing the name of a Caliph or Governor, but as the no God but Allah. Mordtmann (Z.D.M.G., 1880, pp. 154-5) on the whole was in favour of this effort but proposed a variant translation 'There is no other Lawgiver (or Governor) such as Justice' and considered it approached nearer to the marginal legend which he (wrongly) translated as 'There is no Judge (or Imām) without Justice'. Actually it is the well-known slogan of the Khārijites, religious sectarians, who, about the time when the above coin was struck, were in open revolt. It is also to be found on the coins (see pp. 112-13) of their great leader Katarī. One thing seems certain therefore, that this was a Khārijite issue. But whether the Pehlevi legend conceals the name of one of their leaders or some religious formula I cannot say with any conviction. After all the enigma caused Mordtmann viele Mühe during thirty years.

P. 123. T. 18. Thomas's attempt at reading the obverse Pehlevi legend was no more satisfactory than Mordtmann's (see M. 53 above). Valentine (p. 96)

was quite fantastic in his transliteration.

P. 124. Th. 18. The only other specimen I have seen of this remarkable coin is in the Arab Museum, Damascus. It had not been clipped like the above and an outer circle on the reverse was discernable. Mordtmann (Z.D.M.G., 1879, p. 106, no. 93) described a similar specimen in his own collection. Apparently his coin had in the obverse margin ·• in addition on the right of the star and crescent. He read the legend in the mint-place as Sivan Chuan. The other legend he read as STRA, which does not correspond with any known numeral. The coin weighed 47.8 gr. (3.1 grm.). I have suggested that the mint-signature is on the left and that it is a variant of no. 10 = ATRA. The other legend on the right may be a blundered date.

Under the governor 'Abd al-'Azīz ibn 'Abdallāh (above, p. 97) there is a coin described, now in the Berlin Cabinet, which I suspect ought to be attributed to 'Abd al-Raḥmān ibn 'Abdallāh. Unfortunately no clear specimen which would

place the attribution beyond all doubt, has so far come to my notice.

P. 124. B. 39. Nützel read neither the mint-signature, which is perfectly clear, nor the date, which is a little uncertain. Regarding the head-dress of the attendants, see note to I. 12, p. 24, on p. 178.

P. 125. 242, 243. There is a specimen similar to no. 242 in the Kaiser Friedrich Museum, Berlin (Nützel, no. 293, Pl. III). Nützel (p. 381) regarded

the date as being according to the era of Khusrau II. This is highly improbable. The British Museum coins have previously been published by Thomas (J.R.A.S., 1850, p. 321, no. 69 = Mordtmann, Z.D.M.G., 1854, p. 169, no. 863 = Tiesenhausen, nos. 197 and 198; and J.R.A.S., 1871, p. 435, nos. 17 and 18, Pl. II) who also described an example in the Cabinet of Mr. Bland of the same mint but dated according to him (ibid., 1850, p. 320, no. 68, and 1871, p. 435) in the year 65 (= Mordtmann, Z.D.M.G., 1854, p. 169, no. 859 = Tiesenhausen, no. 166). Unfortunately in the absence of illustration this lacks confirmation. Thomas also stated (ibid., 1879, p. 435) that there was an example with the year 67 in the British Museum. He must have been mistaken. Thomas misinterpreted the reverse marginal legend and attributed the coins wrongly to the Caliph 'Ali. In this he was followed by Mordtmann (Z.D.M.G., 1879, pp. 86-7) and Valentine (p. 88). The former went to great lengths to explain the dates on the coins with the known period of 'Ali's Caliphate (A.H. 35-40) and devised a new era in consequence. On the Berlin specimen the word in question was not clear enough to be read by Nützel. The reading given above is, therefore, new but not without parallel on other coins (cf. ANS. 17, p. 127). The interpretation of the countermark is discussed in the Introduction. There is also a badly worn specimen in the Philip Thorburn Collection, London: the date is uncertain though the mint is as above. A comparison may be made between these copper coins and those described on pp. 170-2.

P. 127. ANS. 17. My reasons for the above suggested interpretation are

given in the Introduction.

P. 127. 246. This is the coin described by Thomas (J.R.A.S., 1850, p. 329, no. 70) who interpreted the mint-signature as Khubus but did not attribute the coin to any governor. My reasons for the above suggested interpretation are mentioned in the Introduction. Cf. the coin of this same mint and year bearing

the name of 'Abdallah ibn Khāzim (no. 166, p. 90).

P. 128. 249. Vincent Smith's specimen (Pl. XXIV, no. 14 of his *Indian Museum Catalogue*) has obverse like no. 248 but reverse like no. 249. His interpretations of the legends are, however, quite erroneous (see Introduction). De Morgan (in his *Manuel*, iii, fig. 601, p. 455) illustrates another example of this date in the Collection of Col. Allotte de la Fuÿe. This has the same obverse as no. 249, but with a reverse like that of no. 248. His incorrect attribution is also discussed in the Introduction. The British Museum coin appears to be the same as that published by Prof. Wilson (*Ariana Antiqua*, p. 402, Pl. XVII, no. 4) and commented on by Olshausen (pp. 55-6), and Kraft (pp. 21-2), though their interpretations likewise may be dismissed.

P. 129. 253. An impression of a specimen in the Collection of Col. Allotte de la Fuÿe, Versailles, which was shown to me by Dr. Unvala, is similar to the

above.

P. 129. 254. Cf. the reverse of the coin of Salm ibn Ziyād of this mint and

of the previous year described above, no. 138, p. 81 (Pl. XV. 4).

P. 131. c. Judging from the specimens in the British Museum this change of head-dress occurred between the year 75-6 (P.-Y.E). Unvala, though he is very meticulous about recording details, does not seem to have noted this interesting variation. The former type of head-dress only occurs once to my knowledge on the coins of the Umaiyad Governors described p. 124, B. 39.

P. 131. 255. Soret (Lettre à M. Justus Olshausen, p. 13) has published and illustrated an example of this date but with the narrow-faced effigy similar to that on prototype d (Pl. XXIII), and no. 256 below. It thus forms an instructive link in the chain of evolution. The coin was in the Sprewitz Collection (no. 742 of Fraehn's Catalogue). Unvala mentions several other examples of this date (nos. 838-48 and Pl.) but does not distinguish the variation in portraiture. This date has been wrongly read as shst (60) [Mordtmann in Z.D.M.G., 1865, p. 486, no. 76], and as yshst (61) [Mordtmann, ibid., p. 474, no. 169, and Stickel, Handbuch, ii, p. 108, no. 56, Pl.]. An example from a find is illustrated in an article by Ulla S. Linder in Nordisk Numismatisk Årsskrift, 1938, p. 116, fig. 3.

P. 131. 256. Ascoli (Dodici Monete etc., pp. 72-3) describes a coin of this date which he wrongly interprets as 117 (HFDHST (WFDHST), otherwise it would be, as he thought it was, una piccola novità per la cronologia e per la storia.

P. 132. 257. Other varieties of this date in Unvala (nos. 849-58). There is

another as well in the Istanbul Museum.

P. 132. U. 1. This is the only known specimen of this date. It has been described and illustrated but not weighed by its former owner (Unvala,

no. 859, Pl.).

P. 132. 258. This is the coin mentioned by Thomas (J.R.A.S., 1880, p. 347, no. 1, and 1871, p. 455, no. 1), who, however, read the date wrongly as JHĀRSHST (64), although Olshausen previously in 1843 (Pehlewi-Legenden, p. 41) had read the same date correctly on a cast of the same coin. Mordtmann (Z.D.M.G., 1854, p. 174, no. 883), followed the latter though he recanted afterwards (ibid., 1865, p. 474, no. 169). Stickel published another example (Handbuch, ii, p. 109, no. 59) and correctly interpreted the date. For other examples of this date see Unvala, nos. 866-72.

P. 133. Z. 4. Mordtmann (Z.D.M.G., 1865, p. 475, no. 183) published one of this date in the Subhi Pasha Collection. The obverse of another example in the Kaiser Friedrich Museum, Berlin, is illustrated by Nützel, Pl. III, no. 206. For

other varieties observed by Unvala see his nos. 881-4.

P. 133. 259. Mordtmann (Z.D.M.G., 1865, p. 475, no. 184) published a similar specimen in the Subhi Pasha Collection. Another in the Kaiser Friedrich Museum, Berlin, is recorded by Nützel (no. 207). For other varieties

see Unvala, nos. 888-91 and 2033.

P. 134. 260. Mordtmann (Z.D.M.G., 1854, p. 174, no. 884, Pl. IX. 34) described a coin of this date in his own collection. See previously his misreading of the name and date corrected by Olshausen (Z.D.M.G., 1848, pp. 110-11). Thomas (J.R.A.S., 1871, p. 456, no. 3) quite mistakenly read the governor's name as Ḥārith on a similar coin. There is a specimen of this date

exhibited in the Istanbul Museum. For other varieties noted by Unvala see his nos. 895-8.

261. This is one of the two coins mentioned by Thomas (J.R.A.S.. P. 134. 1850, p. 347, no. 6). The other was in the Stokes Collection. In a footnote (no. 4) he states that the margin had the additional word ملدي (see coin no. 263). There is certainly no trace of such on the British Museum specimen and I have never yet seen a coin of 'Umar of this year with such a legend. Olshausen in 1843 (on. cit., p. 30, Pl. no. 1) illustrated a fragmentary coin of this date in the Copenhagen Cabinet (= Ostrup, no. 73, where the date is incorrectly given as 130). On this example also there is no instance of the additional marginal legend although judging from Mordtmann (Z.D.M.G., 1854, p. 174, no. 885) one might readily conclude there were. But the latter has been misled by Thomas's footnote mentioned above. Unvala (no. 900) repeats this erroneous detail, although amongst the various other examples he cites there is none with such a legend except one (no. 909), which is so fragmentary that it apparently does not even have the governor's name. In his footnote p. 18, 4, he refers to Tornberg's MS. Catalogue and to the same author's Symbolae (iii, p. 26), no. 67, as being relevant. The former reference I have been unable to verify, but the latter records a coin of 'Umar dated not 120 but 126 (SHSH VIST ST). See To. 4, p. 135. My conclusion is that there is no satisfactory evidence of such an early appearance of this marginal legend on those coins. Olshausen (op. cit., p. 79) also records another in the Pogge Collection, Greifswald. See also Stickel (Handbuch, ii, no. 60).

P. 134. 262. A variety of this year was described by Mordtmann (*Z.D.M.G.*, 1865, p. 487, no. 84) and by Nützel (no. 208, Pl. III). See also *Num. Circ.*, 1935, col. 434. For other examples see *Unvala*, nos. 912–22. A specimen in the Bibliothèque Nationale (*Lavoix*, no. 153) is wrongly ascribed to the year 127.

P. 135. 263. This is one of the specimens of this date mentioned by Thomas (J.R.A.S., 1850, p. 347, no. 7). There is one illustrated in the Catalogue of the Count von Wiczay Collection (1814, Pt. i, p. 299, no. 6360, Pl. XXVII, no. 589) but not attributed. In 1840 Longpérier (Essai, pp. 82-3, Pl. XII, no. 3), published an example obviously of this date from the cabinet of M. Rigollet but was also quite unable to interpret it. Very soon afterwards, however, in 1843, Olshausen (op. cit., p. 31), was able to classify it successfully. Another specimen is illustrated in G. Geitlin (Beskrifning, pp. 201-2, Pl. I, no. 8). Cf. Nützel, no. 213, Lavoix, no. 152, and Stickel, no. 62.

P. 135. 264. Mordtmann (Z.D.M.G., 1865, p. 487, no. 86) records an example in the von Prokesch-Osten Collection of this date with a pellet r. and l. of flames and over the u of the mint-name, and without legend in the third quarter. This last detail is not noted by Unvala (no. 925). For other varieties not already published see Unvala, nos. 933-7, 942-5, and 2034, and also Istanbul Museum Catalogue, no. 914.

P. 136. B. 40. There is a fragment in the Copenhagen Cabinet (Østrup, no. 75, where it is imperfectly described). In what remains of it, it varies in one detail, not noted by Unvala (no. 1158), in having a small stroke above the date. This was the coin mentioned by Olshausen (op. cit., p. 31), but not reproduced. See note to B. 42 on p. 206. In 1862 Prince Gagarine published (Lettre, pp. 8-9),

a specimen in his own collection with details as above, and Soret (ibid., p. 8, footnote) added that he had had the good fortune to find another specimen amongst the coins brought back from Teheran by Colonel Brongniard. Apparently Mordtmann was unaware of this, for in 1865 (Z.D.M.G., p. 488, no. 89) he described another example which he regarded as unique. Stickel (Handbuch, ii, p. 113, no. 65) followed in 1870 with his description of another in the Jena Cabinet, which he thought was the second known specimen. Thomas (J.R.A.S., 1871, p. 457, no. 4 a) was also unaware of the publication by Prince Gagarine. Markoff (Monnaies Arsacides, etc., p. 125) in 1889 recorded another in the Asiatic Institute St. Petersburg (= Dorn, Mélanges, ii, p. 261 d), Unvala saw two specimens in the Zubov Collection, Moscow, and one in the Ermitage, Leningrad (his nos. 1156-7, 1159).

P. 137. ETN. 21. In addition to the specimens in other collections noted by Unvala (nos. 957-66) there is one in the Fitzwilliam Museum, Cambridge, and another in the Istanbul Museum (Recent Acquisitions). The above specimen is

the first one to be reproduced in its entirety.

P. 137. 266. Olshausen (op. cit., p. 23) read this date as 220 and Thomas apparently agreed with him (J.R.A.S., 1850, p. 347, no. 14). But Mordtmann (Z.D.M.G., 1854, pp. 174-5, no. 886, Pl. IX. 35) interpreted it correctly, as did Stickel (Handbuch, no. 61), and Nützel (nos. 209-11). Østrup (no. 74) regards the irregular number as a mistake on the part of the engraver, but there is no necessity to look upon it as other than a linguistic alternative. Cf. date 132 on no. 304, p. 154. Thomas (ibid., and 1871, p. 457, no. 6) gives the wrong form of marginal legend in the third quarter, a mistake which unfortunately has found its way into Unvala (nos. 969 and 972). The date is extremely common as can be seen from Unvala's citations (nos. 967-1005, and 2037-42). See also I. 51, p. 136.

Ghalib Edhem in his Catalogue of the Istanbul Museum coins (nos. 20 and 21) recorded two specimens with the date written normally as DUVISTST. During a recent visit I have been able to verify this reading. Unvala also came across an example in the Zubov Collection, Moscow, with the same spelling (his no. 978). See also Num. Circ., 1935, col. 434. The coin in the Istanbul Museum (no. 19)

that was dated 120 by Ghalib Edhem is really 122 (DUVISTST).

P. 137. B. 41. This is the coin described by Mordtmann (Z.D.M.G., 1854, p. 175, no. 887) and previously noted by Olshausen (op. cit., p. 73). A few more examples are noted by Unvala (1008-16, and 2043). In addition there is one in the Istanbul Museum (Catalogue, no. 22), which I have verified. Markoff (Monnaies Arsacides, etc., p. 124, nos. 11 and 12) mentioned two varieties with 1161 in the third segment of the margin. This is accepted by Unvala (nos. 2044-5) but as this marginal legend does not occur until a later date it is permissible to consider the possibility that Markoff misread the date.

P. 137. 267. This is the coin described by Mordtmann (Z.D.M.G., 1854, p. 175, no. 889), where by a printer's error the date is given as 125 (corrected by him in Z.D.M.G., 1858, p. 56, no. 310). So that Unvala's nos. 1017 and 1020 are actually one and the same coin though judging by his transcriptions of the date they appear quite different in epigraphy. The former is certainly wrong. The same applies to his transcription (no. 1019) of the date on the

Jena coin mentioned by Stickel (*Handbuch*, ii, p. 112, no. 63). On all the specimens of this date that I have encountered the date has been invariably as above. In addition to the examples cited by Unvala there are others in the Istanbul Museum and the Ashmolean, Oxford.

P. 137. B. 42. Unvala also records one in Stockholm (no. 1034), but his citation of Mordtmann (no. 1032) is, as I shall show, quite without foundation and his epigraphy purely supposititious. Olshausen (op. cit., p. 18) mentioned a coin in the Copenhagen Cabinet of this year with 'Umar's name in the margin. In the English translation (Num. Chron., xi, p. 73), the important phrase 'in the margin' (am Rande) is omitted, thus leading to the erroneous opinion that these are coins with 'Umar's name in the customary place, namely, in the field: whereas they are actually specimens of the very rare type with 'Umar's name in Kufic in the margin and in Pehlevi in the field (see B. 40, p. 136). Misled by this brief mention by Olshausen, Mordtmann (Z.D.M.G., 1854, p. 175, no. 890) has described it as if it were a coin with 'Umar (عمر) in the field. This has been embodied by Unvala (no. 1032), without verification. There are no such coins in the Copenhagen Catalogue (Ostrup, nos. 70-98), a fact which I have verified from casts, but there is in fact there a fragment of a coin of this date with 'Umar ( ) written in the margin, which after all was what Olshausen actually stated. Krafft (p. 12, no. 3) has made the same mistake as Mordtmann. His plate reference is also wrong.

The coin of this type and year recorded in the Istanbul Museum Catalogue

(no. 24) is really of the year 122.

Markoff (Monnaies Arsacides, etc., p. 125, nos. 16-20) records specimens of this type and year apparently without any legend in the third segment of the margin. But this may be and most probably is an inexact description on the part of Markoff. It is recorded without comment by Unvala (nos. 2046-50). See also below, no. 274, note.

P. 138. I. 52. In 1937 during a hurried visit to Aleppo, I noted what appeared to me at the time to be an example of this year in the private collection of the Belgian Consul Maître Josef Poche. Unfortunately I did not obtain a rubbing.

P. 138. 270. = Nummi Veteres, p. 205, XVIII, B. 2. Cf. Nützel, nos. 216–17, and Stickel, nos. 66 and 67. Another example of this date is mentioned in Num. Circ., 1935, col. 434, and in the Karabacek Sale (Schulman, Nov., 1937, no. 1090.) Olshausen (op. cit., p. 19, Pl. no. 3) illustrated another example in the Copenhagen Cabinet (= Østrup, no. 77). Its weight is 29.3 gr. (1.90 grm.). Unvala (no. 1062) has read the date on a cast of a coin in the Istanbul Museum which I communicated to him, as HF(T)VISTST = 127. My opinion now that I have seen the coin itself, is that it is more probably P(NJ)VISTST = 125, or else VISTST = 120 with the Pehlevi letter P in front. Cf. the case of Th. 19, p. 132, and note at end, p. 203. The presence of IICI in the second quarter of the legend is not against this possibility as it occurs on coins of the governor Sa'id as early as 125.

P. 138. 271. = Nummi Veteres, ibid., B. 1. Cf. Nützel, nos. 218-21. Olshausen (op. cit., p. 19) mentioned an example of this date in the Copenhagen Cabinet (= Østrup, no. 78) which weighs 28-5 gr. (1.85 grm.).

P. 139. 272. = Nummi Veteres, ibid., B. 3 = Olshausen, op. cit., p. 27.

P. 139. 273. This is the coin illustrated in *Numismata Orientalia*, DXLI, Pl. XXIX = Olshausen, p. 29. Thomas (*J.R.A.S.*, 1850, p. 347, no. 12) gives the reference as DXII, an error incorporated by Unvala in his notes to

page xxiii, 4.

P. 139. 274. Examples of this date are extremely common as can be seen from Unvala's citations (nos. 1063-1102). In addition I noted nine examples in the Istanbul Museum. The two examples given by Unvala (nos. 1091, 1092) as being in the Copenhagen Cabinet are, if his transcriptions are correct, both erratic in the epigraphy of the date. There is only one coin of the year 128 in Copenhagen (Ostrup, no. 78), and from an examination of casts of all coins of Tabaristān in that collection I can certify that there is only one specimen which has a normal date-legend as on the above coins. Again Unvala (nos. 1071-2) records two coins in the British Museum as having the legend Arzut behind the head written thus ippa (sic). As can be seen from an examination of the plates which illustrate all the coins in the National Collection this is not the case. Markoff (Monnaies Arsacides, etc., p. 125, nos. 21-24) records examples of this type and year apparently without any Pehlevi legend in the third quarter of the margin. This is certainly due to a mistake in description. Unvala cites it, however (nos. 2051-4), without comment.

P. 139. 275. This is one of the examples of this date recorded by Thomas (J.R.A.S., 1850, p. 347, no. 13). Olshausen had previously, in 1843 (op. cit., p. 19), recorded a specimen of this year in the Copenhagen Cabinet (Ostrup, no. 79). Cf. Nützel, nos. 222-4. Numerous other examples have been recorded. See Unvala (nos. 1103-48). There are at least five examples in the Istanbul Museum. Unvala (no. 1108) wrongly describes the AFZUT legend on the British Museum specimen as produced as can be seen by a reference to the Plate. He

has also omitted to note the pellet over the s of the mint-name.

P. 139. 276. There is a similar coin in the Sir Richard Burn Collection, Oxford. A specimen of this coin, but without pellet over mint-name, is illustrated in Lindberg's Lettre à M. le Chevalier P. O. Bröndsted, 1830, p. 8, Pl. II, no. 9, but the Pehlevi inscriptions had not as yet been deciphered by Olshausen so that only the Kufic legend of 'Umar was read and the coin was wrongly ascribed to the early Caliph of that name. An example probably of this date is recorded by J. Leitzmann (in his Num. Zeitschr., 1851, p. 1.) and in the Thomsen Sale Catalogue (no. 874).

P. 140. 277. (Glendining Sale, May 24, 1938.) This is a variety not recorded

by Unvala (nos. 1162-86 a).

P. 140. ANS. 19. Olshausen (op. cit., p. 18, Pl. no. 2) illustrated a similar specimen in the Copenhagen Cabinet (= Ostrup, no. 76). So did Niebuhr (Beschreibung, Pl. XII, no. 22). In addition to the examples cited by Unvala for this date I have noted: Stickel (Handbuch, ii, p. 114, nos. 71 and 72); Dorn (Mélanges, vi, p. 143); and one in the Fitzwilliam Museum, Cambridge. There is one illustrated in v. Schrötter's Wörterbuch, Pl. 25, no. 409. The specimen mentioned by Markoff (Monnaies Arsacides, etc., p. 126, no. 25) is wrongly cited by Unvala (no. 2055) as if the Pehlevi legend in the third quarter of the margin were missing and as if the date were 128. Markoff, incidentally, wrongly characterizes the Arabic script of the name-legend as naskhī. He gives also nine others (ibid., nos. 26-34) of this date with margin as on no. 277 above.

Unvala (nos. 2056-64), however, has contrived to subdivide these into two varieties quite without reason.

P. 140. 278. This is the coin illustrated in Numismata Orientalia (Pl. XXIX, no. DXLII). Thomas (J.R.A.S., 1850, p. 347, no. 9) has given the wrong reference to Marsden, a mistake repeated by Unvala (p. xxvi, note 5). A specimen of this coin in the Collection of Count von Wiczay (Catalogue, no. 6359, Pl. XXVII, no. 588) was illustrated but not attributed until Olshausen read the legends (op. cit., p. 29). See also Krafft (p. 12, no. 5).

P. 141. 280. Mordtmann (Z.D.M.G., 1865, p. 489, nos. 95 and 96) records two examples of this date, one with, and the other without the small crescent over 1.

shoulder.

P. 141. 281. (Glendining Sale, May 24, 1938.) See also Num. Circ., 1935, col. 434. In addition to the varieties cited by Unvala (nos. 1187-1230), there is one like no. 278 above in the Hunterian Museum, Glasgow University (Coats Collection, MS. Catalogue, no. 3524, where, however, it is wrongly read as 125). A specimen in the Bibliothèque Nationale, Paris, has been wrongly dated by Lavoix (no. 155) to the year 128.

P. 141. 282. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 347,

no. 10) and by Olshausen (op. cit., p. 27).

P. 141. 283. Stickel (Handbuch, ii, p. 115, nos. 75 and 76) records two varieties of this date, one with pellet 1. and r. of flames, and another with pellet over s of vist in the date. Some other varieties are given by Unvala (nos. 1237-55).

There are also two specimens in the Istanbul Museum.

P. 142. I. 53. This coin was apparently not known to Ghalib Edhem when he compiled his catalogue, otherwise he would not have called the governor Sa'īd ibn 'Amr (p. 15). The earliest mention of a coin of this type, but without date, is that given by Fraehn as quoted above (p. 142). Dorn (Mélanges, ii, p. 260), recorded one in the St. Petersburg Academy Museum of this year, but without reproduction. See also Dorn, Das Asiatische Museum, p. 41. The first example to be illustrated is one in the Unvala Collection, now in the K. R. Cama Oriental Institute, Bombay (Unvala, no. 1261). Unvala also records one in the Bibliothèque Nationale, Paris, which has been acquired since Lavoix published his Catalogue.

P. 143. I. 54. There is another example (no. 34). Tornberg (Symbolae, iii, pp. 26-7, Pl. I, no. 4) published a similar example in 1856. An example in the Subhi Pasha Collection was recorded by Mordtmann (Z.D.M.G., 1865, p. 475, no. 186), who described the arabesques in the first and fourth quarters of the obverse as lilies. (So also Unvala, p. 12). Tornberg correctly identified the governor whose coins these are as Yaḥyā ibn Mikhnāk; though Mordtmann wrongly attributed them (Z.D.M.G., 1879, p. 110, no. 8) to a successor called Yaḥyā al-Ḥarashī, whose coinage is described p. 143, no. 284.

P. 143. C. 7. Østrup's suggested date 139 is impossible. Strange to say he failed to read the governor's name. Although the coin is a poor specimen I have illustrated it to show that the Arabic legend at all events is beyond

question. Unvala (no. 1267) correctly attributed it to Yahyā.

P. 143. O. 9. A coin of similar date but without details or references was reported by Mordtmann (Z.D.M.G., 1879, p. 110, no. 8). Unvala (no. 1272) mentions a further example in the Zubov Collection, Moscow, but apparently it has

no additional initial letter in the date. Cf. the observations made under Th. 19, p. 203. The above date might readily be mistaken for ўніст: (i.e. 140), but for the fact that the L would be joined to or curved towards the following letter. Cf. Kudaid 140 and 'Abdallāh 140.

P. 143. 284. This unique coin was first published by the writer in Num. Chron., 1935, pp. 251-3. As can be readily seen from an examination of the plate the date is somewhat unusual. Although at first ascribed to the year 141 a further examination of the legend together with the historical data we possess (see Introduction) regarding al-Ḥarashī, makes the above date the more probable one. With this date Dr. Unvala is also in agreement (no. 1273).

P. 144. B. 43. A coin said to be of this date was published, with illustration of obverse only, by Prince Gagarine in 1862 (*Lettre*, p. 9), and Mordtmann (*Z.D.M.G.*, 1879, p. 111, no. 11) mentioned another but without any descriptive details. According to Unvala (nos. 1325-40) there are numerous specimens known to him in the Zubov Collection, Moscow, in the Ermitage, Leningrad, and

in the Muracciole Collection, Teheran.

287. Mordtmann (Z.D.M.G., 1854, pp. 176-7, no. 903) mentioned a coin of Sulaiman of this date in his own collection. Since he did not describe the remarkable obverse difference, Soret in his note to Prince Gagarine's Lettre, p. 9, concluded that it was of the usual type found on the coins of the other governors. There is no reason to suppose that such was the case. There are fifteen varieties of this date recorded in the Berlin Catalogue (nos. 240-55) one of which is illustrated (Pl. III). In addition to the numerous examples cited by Unvala (nos. 1342-1485 and 2065-6) there are three in the Istanbul Museum. two of which were catalogued by Ghalib Edhem (nos. 31-2), the former one being illustrated (Pl. I). The specimen in the Copenhagen Cabinet has been catalogued recently by Østrup (no. 83), who, like Mordtmann, does not point out the unusual change of obverse type, and in consequence his description is inclined to be misleading. Thomas's reference (J.R.A.S., 1871, p. 458, no. 9), copied by Unvala (p. 30 fn. 7), ought to be corrected to 'Djevdet-Efendi (Journal Asiatique, 1862, p. 185, no. 7)'. The no. 903 which is added belongs to Mordtmann's coin quoted above, and has been misplaced. Markoff (Monnaies Arsacides, etc., pp. 126-7, nos. 35 and 36), also recorded two, both of which he illustrated (Pl. II), but strange to say he characterized the script of Sulaiman's name as Naskhī. There was also one in the Windisch-Grätz Collection (Zambaur, no. 12). Mordtmann also recorded one in 1850 (Z.D.M.G., pp. 91-2, with rough drawing), in the collection of Baron Tecco.

P. 145. 288. This is the only coin of Sulaiman of this date so far published. In the Karabacek Sale Catalogue (Schulman, Nov., 1907, no. 1092, Pl. I, where plate reference is wrongly marked 1029) there is a coin ascribed to this year

but it is really of the year 137.

P. 145. Z. 5. Of the two specimens in the Berlin Catalogue (nos. 234-5) the former is illustrated (Pl. III). Unvala (nos. 1496-7) records other two amongst subsequent acquisitions. In addition to the examples cited by Unvala mention should be made of the one in the Istanbul Museum (Catalogue, no. 43), which was wrongly catalogued as of the year 140, and which Unvala (no. 1530) has also misinterpreted as 137 from a cast of this coin which I communicated to him. The engraving of the numeral (IN) is apt to be mistaken in this case

for pow (HFT) as Unvala has done. There is also said to be a specimen in the Collection of Col. Allotte de la Fuÿe. See also Olshausen (p. 29). Examples are also known of this year with Jarīr's name in the margin but with AFZUT in the field instead of the name-legend. These are described on p. 156.

- P. 145. 289. Mordtmann (Z.D.M.G., 1865, p. 489, no. 98) described one of this year with small star l. and r. of flames. For some other varieties see Unvala (nos. 1500-21).
- P. 145. C. 8. This is the coin first recorded by Olshausen (op. cit., p. 20 = Mordtmann, Z.D.M.G., 1854, p. 176, no. 902). Another of the same date is described by Nützel (no. 238). It weighs 31-8 gr. (2-06 grm.). Unvala states in his note 3, p. xxxii, that Thomas described a specimen of this date in the British Museum. This is not the case. In the same way Unvala (no. 1530) wrongly ascribes to this year the coin of Jarr in the Istanbul Museum which is really dated 135 (see above, note to Z. 5). For other specimens seen by him in the Zubov Collection, Moscow, and in the Ermitage, Leningrad, see his nos. 1525–7 and 1529.

See also note on the coin of Jarīr which was wrongly ascribed to Bishr ibn Marwān (note to Th. 13 on pp. 195-6).

P. 146. 290. The only other certain specimen of this date is recorded by Unvala (no. 1534), in the Zubov Collection, Moscow. It has a slight variation in the spelling of the date.

A coin of this year with Ma'add's name on the margin and with Afzut in the field in place of the name-legend is described on p. 158. This governor's name-legend might also be read as Mu'ādh (معاذ scriptio defectiva for معاذ) as Dorn (Mélanges, iii, p. 505) has suggested.

- P. 147. 291. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 347, no. 16). The specimen in the Copenhagen Cabinet was illustrated by Olshausen (op. cit., Pl. no.  $4 = \emptyset$ strup, no. 84 = Unvala, no. 1596, where the Kufic letter below the governor's name is wrongly reproduced). A specimen obviously of this date was reproduced by Longpérier (Médailles, Pl. XII, no. 5), but quite wrongly ascribed. Mordtmann (Z.D.M.G., 1865, p. 490, no. 101) described an example with breast-ornament . Of the six specimens of this date in the Berlin Museum (Nützel, nos. 256-61) the obverse of one has been illustrated (Pl. III, no. 256). In addition to the examples cited by Unvala there are four in the Istanbul Museum, two of which have been mentioned by Ghalib Edhem in his Catalogue (nos. 35, 36). See also Num. Circ., 1935, col. 434. Unvala (nos. 1537-8) has on p. 12 § 6 of his Introduction made a new variety of reverse margin through misreading Mordtmann's statement in Z.D.M.G., 1865, p. 490, no. 100.
- P. 147. 295. This is the coin mentioned by Thomas (J.R.A.S., 1850, p. 347, no. 17). Nos. 292 and 294 are the two coins mentioned by Olshausen (op. cit., p. 28).
- P. 147. C. 9. A comparison with Unvala (no. 1617) shows the deficiencies in his transcriptions. In addition to the examples cited by Unvala there are two specimens in the Istanbul Museum which have been published by Ghalib Edhem in his Catalogue (nos. 37, 38).
- P. 149. U. 8. This is one of two specimens recently acquired by Dr. Unvala since the publication of his *Numismatique du Ṭabaristān* in which he recorded a specimen seen by him in the Zubov Collection, Moscow.

P. 149. ANS. 20. Thomas (J.R.A.S., 1871, pp. 458-9, no. 10) mentioned an example of this date but without any description or reproduction. Unvala (nos. 1287-92) gives one or two more specimens. The two coins of Mukātil in the Istanbul Museum ascribed to this year by Ghalib Edhem in his Catalogue (nos. 39, 40) are, as I have found on examination, of the year 139.

P. 149. 296. Thomas (J.R.A.S., 1850, p. 347, no. 15) read this and nos. 297 and 298 below correctly as 139, yet on a similar coin described by him (J.R.A.S., 1871, pp. 458-9, no. 10, Pl. II, no. 15) he contrived to read the same date as 129. See T. 19, p. 148. The spellings given by Unvala (nos. 1293-4) for the

date 139 are quite without foundation.

P. 149. C. 10. This is the coin which has been wrongly dated by several authorities (see above, U. 6, p. 148). A coin of this date was also illustrated by Longpérier (Médailles, Pl. XII, no. 6), but quite wrongly attributed. Mordtmann (Z.D.M.G., 1865, pp. 490-1, nos. 103 and 104) describes two coins of this year with breast-ornament , on one there is a star l. and a crescent r. of the flames, while on the other there is a star on each side. Of the specimens in the Berlin Museum (Nützel, nos. 262-4) the obverse of one is illustrated (Pl. III, no. 262). As has been noted above, the two specimens published in the Istanbul Museum Catalogue under the year 138 are really dated 139. In addition to the numerous examples cited by Unvala there is a specimen in the Fitzwilliam Museum, Cambridge. Unvala has since communicated to me four specimens he has recently acquired. See also Num. Circ., 1935, fol. 434.

P. 150. U. 10. This and U. 9 are two of the four specimens recently acquired by Dr. Unvala since the publication of his monograph. The form of the

numeral thirty on the coins of this date is interesting.

P. 150. U. 12. Dr. Unvala has very generously allowed me to publish this and the preceding coin, both from his private collection, which he has acquired since the publication of his book. Both coins are so far unique and are published for the first time.

P. 150. I. 55. Mordtmann (Z.D.M.G., 1865, p. 491, no. 105) described a similar specimen in the von Prokesch Osten Collection. Unvala (no. 1624) has

described another in the Ermitage, Leningrad.

P. 150. 300. This specimen, the only one of this governor so far in the National Collection, is unfortunately too much worn to be worth illustrating. The specimen in the Kaiser Friedrich Museum, Berlin (Nützel, no. 265, Pl. III), is of the same variety.

P. 151. Th. 20. (ex Prince Philippe of Saxe-Coburg-Gotha Collection). Unvala (no. 1647) gives a wrong transcription of the date on this coin, a cast

of which I communicated to him.

P. 151. Z. 6. There is also one like this in the Osman Aridağ Collection,

Istanbul, and in the Unvala Collection.

P. 151. ANS. 21. The earliest mentioned example of this coin was one in Savelieff's book Мухамеданская Нумизматика which contains a section dealing with Pehlevi Inscriptions on the Coins of Ṭabaristān (p. 138), a fact recorded in Mémoires de la Société d'archéologie et de numismatique de St. Pétersbourg, vol. vii, p. 272, and in Mordtmann, Z.D.M.G., 1854, p. 177, no. 907. Dorn (Mélanges, ii, pp. 259-60) at first read the date as 104 but corrected this later (ibid., p. 392). A second example was published by Mordtmann (Z.D.M.G., 1865, p. 476, no. 193)

from the cabinet of von Prokesch Osten, and two other varieties (*ibid.*, p. 491, nos. 106 and 107) from the same source. In addition to several examples cited by Unvala there is one in the Sir Richard Burn Collection, Oxford, and Ghalib Edhem described one in the Istanbul Museum (*Catalogue*, no. 42). The Copenhagen specimens which Unvala mentions (nos. 1645 and 1646) have since been recorded by Østrup (nos. 87 and 88).

P. 151. U. 13. This unique coin is published here for the first time by kind permission of the owner, who acquired it after his own book had been published.

P. 152. U. 16. Zambaur (Manuel, p. 187) mentioned a coin in his own collection (now in the Vienna Museum) with the name Kudaid, but so far as I am aware he never published it. Unvala, however (no. 1657), has since then come across an example in the Muracciole Collection, Teheran, and has fortunately not only described but illustrated it for the first time. Since then he has purchased a further specimen in a bazaar in the East for his own collection. This is the one which he has kindly allowed me to reproduce here. Unvala's note (p. 21) of a coin of Kudaid of uncertain date in the Prince Gagarine Collection is without foundation.

P. 152. ANS. 22. Unvala mentions one or two more examples of this date (nos. 1659-62). The fragment (no. 1663 a), said to be vouched for by Tornberg, is of this date, but is not likely to be a coin of Ibrāhīm because of the legend in the third quarter of the margin.

P. 152. ANS. 23. Mordtmann (Z.D.M.G., 1865, p. 491, nos. 108 and 109) published two examples of this date, the one with star l. and crescent r. of flames, and the other with crescent l. and star r. of flames, the latter also being without the crescent over the l. shoulder on the obverse. In 1879 (*ibid.*, p. 111, no. 15) he had observed three varieties. Ghalib Edhem also published one in his Catalogue of the Istanbul Museum Collection (no. 45). Unvala has one or two additional examples (nos. 1666-71 and 1673-5). This is the first example to be illustrated.

P. 154. 301. Mordtmann reported one in the cabinet of Dr. Rosen (Z.D.M.G., 1848, p. 109) and one in his own collection (Z.D.M.G., 1854, p. 176, no. 898), but with few details. In 1865 (*ibid.*, pp. 491-2, no. 110) he described more carefully another specimen which tallies with the above. The obverse of one of the examples in the Berlin Cabinet is illustrated by Nützel (Pl. III, no. 267). Numerous other examples are cited by Unvala (nos. 1687-1713 and 2068-71), including one (no. 1710) in the Ermitage, Leningrad, which he says is almost silver-plated. In addition, I have noted several specimens in the Istanbul Museum. See also Num. Circ., 1935, col. 434. There is also one in the Ashmolean Museum, Oxford. Unvala has an AFZUT coin in copper (no. 1714) which he ascribes to this date. It is discussed on p. 161.

P. 154. 302. Mordtmann (Z.D.M.G., 1865, p. 475, no. 187) ascribed a coin of this type to this year with a form which he read as je si sat. Unvala (no. 1715) has accepted this. In my opinion it is more likely to be 130 (sivst). Unvala, however, reports two other specimens of this date. One (no. 1716) in the Zubov Collection, Moscow, has apparently the date written thus: (= AYKSIST); while the other in Unvala's own collection now in the K. R. Cama Oriental Institute, Bombay, has the form (= YAJSIVST). Unfortunately he did not illustrate this.

P. 154. 303. An example with this form of date was published by Mordtmann (Z.D.M.G., 1854, p. 176, no. 899) and another variety later (ibid., 1865, p. 492, no. 112) with nothing I. or r. of flames. One of the examples recorded by Stickel (Handbuch, ii, p. 116, no. 77) is said to have a pellet over the p of the mint-name. But the fact that the Pehlevi word du of the date is said to be inclined to the side suggests the possibility that the coin is really dated 133 (Silver) as on no. 305 below, which Unvala (no. 1726) actually dates as 132. The same, in my opinion, is the case with the Berlin Museum coin (Nützel, no. 269) which is more likely to be 133. There is always this possibility of confusion to be guarded against due to the similarity between 2 (µ) and 3 (L).

P. 154. 304. Mordtmann (Z.D.M.G., 1858, p. 56, no. 311 and 1865, p. 492, no. 111) recorded examples with the date in this form. So also Stickel (op. cit., p. 116, no. 79). Various other examples are cited by Unvala. In addition I have seen five specimens in the Istanbul Museum.

P. 154. ANS. 24. Zambaur (Kollektion Windisch-Grätz, no. 9) has one of this date, and his no. 10, which he dates 133, must really be of 132 judging by his transcription of the Pehlevi legend (SIVDUST), unless the latter has been misplaced.

P. 155. 305. This is the coin given by Unvala (no. 1726) but dated by him 132. Mordtmann recorded an example of this year (Z.D.M.G., 1865, p. 492, no. 113). Cf. Stickel, *Handbuch*, p. 116, nos. 80 and 81. The latter coin has the triangle of pellets on the breast, but no small star beside flames on reverse.

P. 155. ANS. 25. In addition to the examples of this date cited by Unvala there is also one in the Ashmolean Museum, Oxford, and several in the Istanbul Museum. See also *Num. Circ.*, 1935, col. 434.

P. 155. 306. Mordtmann published examples of this date in 1854 (Z.D.M.G., p. 176, no. 900).

P. 155. ANS. 26. Cf. Stickel (Handbuch, ii, p. 116, no. 82).

P. 155. Z. 7. Cf. Stickel (op. cit., p. 117, no. 84). In addition to the varieties cited by Unvala there are specimens in the Istanbul Museum and the Ashmolean Museum, Oxford.

P. 156. O. 10. A specimen of this type was published by Mordtmann in 1865 (Z.D.M.G., p. 492, no. 115). Other examples are mentioned by Unvala (nos. 1795, 1811-24) in Paris, Moscow, and Leningrad.

P. 156. 307. Mordtmann mentioned one in 1848 (Z.D.M.G., p. 109) and a specimen of this type was described by Dorn in 1858 (Mélanges, iii, p. 504, no. 1, though given by mistake as 30). Nützel published another in his Catalogue of the Berlin Museum (no. 279). No specimen has been illustrated before now.

P. 156. 308. Mordtmann published a similar example in 1865 (Z.D.M.G., p. 489, no. 97). Nützel also described one in his Catalogue (no. 278). There is also one illustrated in Fraehn's *Ibn Foszlan*, Pl. C, pp. 85-6 and 251, although the Pehlevi legends are not interpreted.

P. 156. ANS. 28. Unvalacites other examples of this type (nos. 1836, 1847-55, and 1877) in Paris, Moscow, and Leningrad. See also Zambaur (Kollektion

Windisch-Grätz, no. 11).

P. 157. Ox. 9. In 1865 (Z.D.M.G., p. 476, no. 189, and p. 492, nos. 117-18) Mordtmann described examples of this date and type. In addition to the

numerous specimens cited by Unvala, there are six in the Istanbul Museum, and another in the Ashmolean besides the one illustrated here.

P. 157. 312. Mordtmann (Z.D.M.G., 1854, p. 176, no. 901) described one of the specimens of this type and date in the Berlin Museum, later catalogued

by Nützel (nos. 280-4). See Olshausen, pp. 73-4.

P. 157. ANS. 31. In addition to the other examples of this year cited by Unvala, there are specimens in the Ashmolean Museum, Oxford, the Fitzwilliam Museum, Cambridge, and in the Philip Ziegler Collection, Manchester (wt. 30.5 gr.). The specimen in the Copenhagen Cabinet (Ostrup, no. 72) is wrongly attributed to the governor Khālid and the date read as 119. Prince Gagarine (Lettre, p. 9, no. 3) mentioned a coin of this date in his collection which was said to have the name Farr in the margin as on no. 308 above, but, unfortunately, it was not illustrated. No other such specimen is known.

P. 158. ETN. 23. The coins described by Nützel in his Catalogue (nos. 285-8) are similar to the above, but the other coins in the Berlin Cabinet (nos. 289-90) which Nützel also attributes to this year are obviously, as can be seen from his Plate III, of a later style and date, namely 142. Unvala (nos. 1927-8) has made the same mistake and read the legend as a defective HF(T)SIVST i.e. 137 instead

of as a perfectly normal DUJHILST i.e. 142 (see RB. 11, p. 159).

P. 158. Ox. 10. This is the first example of this type and year to be published. It must be noted, however, that apart from the top of the first T of the date being unmistakable the date might be read as 136.

P. 158. Flag. 2. This unique coin was first published by Père Paulin Lemaire in *Num. Chron.*, 1938, p. 296, fig. 1. For the regular coins of this governor, also

of this year, see above, no. 290, p. 146.

P. 159. 313. Mordtmann (Z.D.M.G., 1865, p. 493, nos. 121-5) describes several varieties all of which on the obverse are said to have a crescent before the beard. I have never seen any such specimen. The varieties consist of star r. and crescent l. of flames or as above; pellet r. and l. of flames; and star r. and l. of flames. The two examples in the Copenhagen Cabinet are wrongly described in Ostrup (nos. 89 and 90) and ascribed to the year 142. Nützel (nos. 290 a and 290 b) has two of this date though his transcription is at fault.

P. 159. RB. 11. (ex Seaby=Unvala, no. 1974.) Mordtmann (Z.D.M.G., 1865, p. 493, no. 126) describes a specimen like this with ⊙ on the breast and, in addition, apparently with a crescent before the beard. This last detail I suspect (see note to 313). For some other specimens with the above variety of marginal legend see Unvala (nos. 1975–7 and 1989). As already noted above (note to no. 313) the two Copenhagen specimens (Østrup, nos. 89 and 90) are

wrongly ascribed to this year.

P. 159. ANS. 32. Various examples of this new type with longer marginal legends and extra outer circles are recorded by Mordtmann (Z.D.M.G., 1865, p. 493, no. 127). He noted the following breast-ornaments in addition to the above in addition to the above: (1) pellet l. and erescent r.; (2) crescent l. and star r.; and (3) crescent l. and pellet r. of flames. He incidentally interprets the Kufic letter and the legend in the fourth quarter as being the beginning of the name of Umar (in Arabic and in Pehlevi). The example cited by Unvala (no. 1970) from the British Museum as being of this year is really dated 143

(see no. 314, p. 160). Nützel illustrated a variety of this type and date in his Catalogue of the Berlin Cabinet (no. 289, Pl. III) but unfortunately, as I have already pointed out, he wrongly ascribed it to the year 137.

P. 160. 316. This is the coin wrongly ascribed by Unvala (no. 1970) to the

preceding year.

- P. 160. ANS. 33. Mordtmann (Z.D.M.G., 1865, p. 494, no. 129) described a similar one with star l. and crescent r. of flames. He also mentioned an example of this year (ibid., no. 128), which, judging by his reference to a previous coin, must have had the old type of marginal legends as found on nos. 301-13 above. Unvala has incorporated this as such into his book (nos. 1990-1). I suspect that Mordtmann's reference is wrong (read 127 for 121) and that the marginal legend on the coin in question was the normal one as on the above. At all events what is quite certain is that Unvala's nos. 1990 and 1991 which he describes as if they were alike, are, if we follow Mordtmann, to whom he refers, quite different. The specimen mentioned by Stickel (Handbuch, ii, p. 119, no. 89) is quite possibly not 143 but really 142 and similar to the coin of that date mentioned by Mordtmann (ibid., p. 493, no. 126). All this confusion would have been avoided if the coins in question had been illustrated. I feel in consequence—in the absence of any reproduction—no confidence in the other example said to be of the old type and of the year 143 described by Unvala (no. 1996) as being in the Zubov Collection, Moscow. Incidentally Unvala has mixed up his references to Mordtmann in his nos. 1965 and 1990-1.
- P. 160. Ties. 4. This remarkable coin was first published and illustrated by Tiesenhausen from the Linevitch Collection (Zapiski, ix, pp. 224-5) and mentioned by Vasmer in the Encyclopaedia of Islam (art. Mazandarān, p. 429). The coin which is in the Ermitage, Leningrad, has recently been republished by Unvala (no. 2013, Pl.). Tiesenhausen equated the date 161 with A.H. 196. It should be 197.

P. 162. b.1. The specimen illustrated by Thomas (Num. Chron., 1881, Pl. VI. 3) also bears the same countermark.

P. 163. b. 4. Stickel (Handbuch, ii, p. 122, no. 91, Pl.) has wrongly interpreted the corrupt Pehlevi legend as Arabic (غيان له) and as a new Münzterminus.

P. 163 f. b. 5-b. 8. These coins have been regarded by some numismatists as having Arabic legends. With this I cannot agree, see Introduction. The number of specimens of each variety in the Museum trays is as follows: b. 5 (3); b. 6 (2); b. 7 (5); and b. 8 (7). The last variety continues throughout the issues of the 'Abbāsid governors.

P. 164. 319. Cf. Stickel (Handbuch, ii, p. 121, no. 90, Pl.); Weyl (Fonrobert'sche Sammlung, p. 395, no. 6719) and Zambaur (Kollektion Windisch-Grätz,

nos. 13-15).

P. 165. 324. This is the specimen mentioned by Thomas (Prinsep's Essays,

ii, p. 117).

P. 166. AF. 1. Illustrated by the owner in his article in Num. Chron., 1927, Pl. VIII, no. 8. Another example of this rare variety is illustrated in Tiesenhausen's article in Transactions of the Russian Archaeological Society, vol. vi, 1891, p. 230.

P. 167. Ties. 5. This is a unique coin first published by Tiesenhausen (Notice sur une collection de monnaies orientales de M. le Comte S. Stroganoff,

St. Petersburg, 1880, p. 11, Pl. I, no. 5). Only the obverse was illustrated, so presumably the reverse differed in no noticeable degree from the usual type. This coin corresponds to no. 28 in Colonel Allotte de la Fuÿe's list (op. cit., p. 171).

- P. 167. I. 57. This is a unique coin in the Istanbul Museum which I have been enabled to publish here for the first time by kind permission of the Director Aziz Oğan. Unfortunately the coin is broken, so that it is too fragile to be cast for reproduction without endangering it further. The drawing which I made of its essential features on the spot in October 1937 is perhaps a sufficient substitute.
- P. 168. 344. Thomas (*Prinsep's Essays*, ii, p. 118) mistakenly considered that the pedestal of the altar was formed of the Kufic word على.
- P. 169. Nej. 1. First published by Fraehn (Novae Symbolae, St. Petersburg, 1819, pp. 45-6, Pl. II, no. 14 and again in his Die Münzen der Chane vom Ulus Dschutschi's, St. Petersburg, 1832, pp. 53-6 where he records another, though poorer, specimen in the Asiatic Museum of the Russian Academy). See also Dorn, Das Asiatische Museum, p. 424.

Soret (in his Lettre à M. François Duval, 1843, p. 13) mentions 'une nouvelle variété en bronze' of this coin which he declares completes the legend on the Nejelow specimen. Stickel (Handbuch, ii, p. 122) reads differently from both Fraehn and Soret. See Introduction, p. xcvi.

- P. 170. 351. This is the coin I communicated to Dr. Unvala with whose interpretation of the legends in his article (*Num. Chron.*, 1937, p. 286, Pl. XXXIV, no. 4) I cannot agree. See below, no. 352.
- P. 170. 352. The coin probably came from Sīstān with so many more presented by this donor. I communicated it to Dr. Unvala (Num. Chron., ibid., no. 3), who stated that the reading was doubtful. He failed to note that the first line was Arabic and that the legend is reversed on this specimen. While the middle line may be the Pehlevi NVAK... the last line is undoubtedly AFZUT as Dr. Unvala has also observed. It is the presence of the Arabic legend that places these coins definitely within the Muḥammadan period. As to the date, it is more likely to be Umaiyad than 'Abbāsid but there are no deciding elements.

I have not included in this section several of the coins described by Dr. Unvala in his above-mentioned article as monnaies arabes à légendes pehlevies—particularly his nos. 1, 2, 11, and 12—as in my opinion they cannot with any certainty be ascribed to the Arab period. As for his nos. 6–10 (Byzantine Type) and 13–20 (Caliph Type) they will be considered in a following volume of this Catalogue. His Pegasus Type (nos. 21, 22) has no indication of Arabic influence; while his other coins 23–35, with the exception of no. 29 given below, are all without effigies and it is hoped will be described in a subsequent volume of this Catalogue where they properly belong, since, in spite of their Pehlevi legends, they do not have Sassanian busts and/or fire-altars, and in consequence do not come within the limits of the present volume.

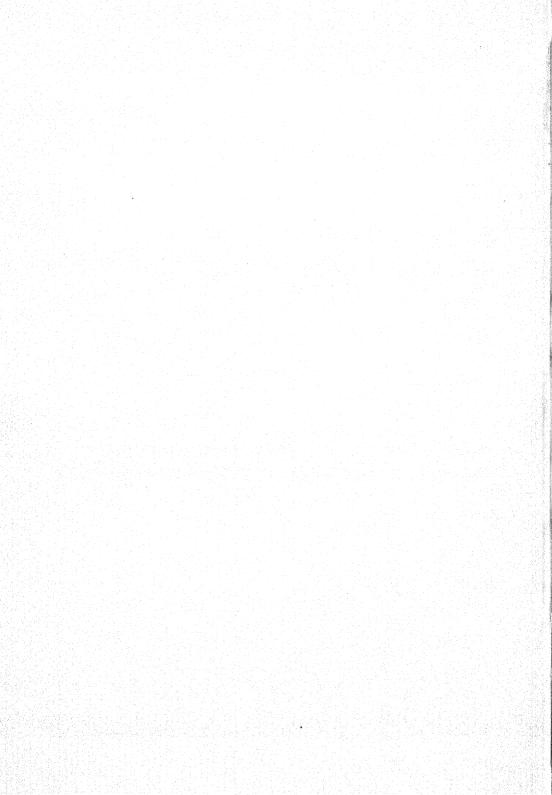

P. 172. B. 44. It has been impossible to identify this governor. The coin, in all probability, was struck under the Umaiyads perhaps about A.H. 67 or 68, but the date is by no means certain.

P. 173. U. 23. Unvala suggests that the uncertain Pehlevi legend on the reverse contains the name of the governor (of Iṣṭakhr perhaps) who struck the coin, as well as that of his father and grandfather. He reads lines 3 and 4 as Dāṭpērōč son of Manṣūr. Judging by the name on the obverse one would expect the governor's name to be Manṣūr. It is also possible that the name is that of the famous 'Abbāsid Caliph al-Manṣūr (A.H. 136-58=A.D. 754-75). The latter was the conclusion of Col. Allotte de la Fuÿe. I am not myself prepared to dogmatize on the matter. Epigraphically the open form of the letter 'ain ( ) in the legend 'liçā' points to an early date more probably in the Umaiyad period.

In addition to the above isolated examples of the Arab-Sassanian type we find one or two cases where an effigy after the Sassanian fashion continues to be used on coins that have no Pehlevi legends at all. Such instances belong more

appropriately to a subsequent volume of this Catalogue.

P. 174. I. 58. This and another specimen (no. 47) in the same Museum were published by Ghalib Edhem. Unvala (Num. du Tabaristān, p. 14) records other two examples in the Zubov Collection. Miles (op. cit., p. 47, no. 68 E) mentions yet another now in the Berlin Museum (no. 127/1935 Gotha), which shows the marginal legend more distinctly as on no. 290 (see his Plate II). These remarkable coins are discussed in the Introduction, pp. xevii f.

## **INDEXES**
